Published September 2018
This publication is an announcement of the current policies at International Technological University (ITU).

ITU makes every effort to ensure accuracy of the information contained in this catalog. Some policies, rules, procedures, and regulations may change and therefore, alter the information during this catalog period. The University reserves the right to change policies, regulations, fees, and course of instruction upon direction of the ITU Administration.

ACCREDITATION
International Technological University is accredited by the WASC Senior College and University Commission (WSCUC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. Questions regarding the University's accreditation may be directed to the institution or to WASC at:

www.wascsenior.org/contact or (510) 748-9001.
International Technological University (ITU) is a private institution. The University has received approval to operate from the Bureau for Private Postsecondary Education (www.bppe.ca.gov). An approval to operate means compliance with state standards as set forth in the California Education Code, Title 3, Division 10, Part 59, Chapter 8.

GENERAL INFORMATION FOR PROSPECTIVE STUDENTS
Prospective students are encouraged to review this catalog prior to signing an enrollment agreement. They are also encouraged to review the School Performance Fact Sheet, which must be provided to a student prior to signing an enrollment agreement.

COMPLAINTS
Students or any member of the public may file a complaint about this institution with the Bureau for Private Postsecondary Education by calling (888) 370-7589, or by completing a complaint form, which can be obtained on the bureau’s Internet website at www.bppe.ca.gov.

ADDITIONAL QUESTIONS
Any additional questions and/or concerns may be addressed by contacting the school at 2711 North First Street, San Jose, CA 95134, or by calling (888) 488-4968. Any questions a student may have regarding this catalog that have not been satisfactorily answered by the institution may be directed to the Bureau for Private Postsecondary Education at:

Physical Address:
2535 Capitol Oaks Drive, Suite 400,
Sacramento, CA 95833

Mailing Address:

FROM THE OFFICE OF THE UNIVERSITY PRESIDENT

Dear Student,

On behalf of the International Technological University (ITU) faculty, staff, and alumni, welcome to a new year at ITU! We are proud to be your university of choice, and we wish you a successful year and career ahead.

In this catalog, you will find a wealth of information about ITU’s academic programs, services, procedures, and regulations to help you succeed. Our University’s vision is to empower our students through innovative, industry-linked education. Because the vast majority of ITU faculty members are working professionals in their fields, they impart relevant knowledge and applicable skills that can be used long after graduation. It is our shared goal that, when you graduate, you will be both well-educated and well-prepared for the vast career opportunities available to you.

The year ahead promises to be a positive one for all of us at ITU and for the broader community we serve. ITU’s reaffirmation of accreditation by the WASC Senior College and University Commission, along with our achievement of ACBSP accreditation, speak to the quality and recognition of our programs. Our new master’s degrees, institutes, and short-term certificate programs in Computer Science and Cybersecurity also expand our ability to serve the needs of Silicon Valley’s high tech professionals.

In addition to your studies, ITU offers a variety of cultural and social activities, including mixers, lectures, presentations, and cultural celebrations that reflect our university’s rich diversity. ITU’s Student Government Association offers community and social events for students to be among colleagues and make lasting friendships. During your studies, take advantage of the community resources offered in Silicon Valley and the Bay Area.

We are thrilled to have you join us. We value our students and strive to provide a memorable educational experience to ensure their professional and personal success.

Again, we thank you, and we look forward to another remarkable and exciting academic year.

Sincerely,

Gregory O'Brien, Ph.D.
University President

International Technological University (ITU) is based in Silicon Valley, the technology center of the world. The University provides a practical academic experience for students who want to learn directly from the professionals shaping high tech industries. Silicon Valley’s brightest minds have always been part of our faculty, advisory board, and Board of Trustees, resulting in a premier education in technology and business.

ITU’s Silicon Valley faculty members bring a high-level industry experience from innovative companies like Google and Oracle to the courses they teach, giving students an edge on the latest discoveries and implementations in tech innovation and empowering their careers.

Vision
To empower people and advance global prosperity through inventive, industry-linked Silicon Valley education.

Mission
ITU pioneers a modern, industry-focused educational model to deliver education globally. ITU’s educational pedagogy cultivates innovative thinking, ethical leadership, and entrepreneurial spirit through practical, industry relevant curriculum that reflects Silicon Valley’s culture. ITU closes the employment skills gap and empowers people to lead successful, enriching lives as meaningful contributors to the global community.

Purpose
The purpose of ITU is to foster excellence in education for students particularly interested in the high-tech entrepreneurial field. All our programs have an applied nature, with an emphasis on specialty areas tailored to the market needs of Silicon Valley companies. Students are actively encouraged to affiliate or intern with relevant local industry firms from the very beginning of their academic studies as an integral part of ITU’s academic pedagogy. As such, the hallmarks of an ITU education include:

- A special focus on practical engineering, business, biotech, and media arts research projects.
- Relevant internships integrated into academic programs from the beginning of a student’s tenure.
- Multicultural awareness through the international exchange of scholars and students from locations around the globe.
- Systemically designed, competency-based courses that utilize innovative instructional methods.
- Cross-disciplinary curriculum that encourages students to look beyond their own fields and generate new possibilities.
- Programs that meet the high standards of both the ITU Advisory Board, which consists of prominent Silicon Valley industry leaders, and the WASC Senior College and University Commission (WSCUC).

History
After earning his Ph.D. in Electrical Engineering from the University of Illinois, Urbana-Champaign, ITU’s Founder, Dr. Shu-Park Chan, joined Santa Clara University’s electrical engineering department, where he served for 30 years, eventually becoming Dean of the Engineering School. Dr. Chan’s department began with a mere 50 students, and under his direction, over 1,200 students eventually enrolled. Because of his cutting-edge research in the area of graph theory and network topology, his Ph.D. students went onto become the co-founders of Cadence, ATML, Microelectronics Technologies, Oak Technology, Inc. and many other pillar companies that created the Silicon Valley phenomenon. Conservatively speaking, over 80% of all microprocessors designed and developed within the last 25 years throughout the world have been created or touched by technology generated from Dr. Chan’s students.

In 1994, Dr. Chan retired from SCU and founded ITU to be the world’s first global networked university model. While pioneering high-tech engineering education at SCU, Dr. Chan recognized that proper engineering education bridges the “relevance gap” – found in most academic institutions – between academic theory and practical application. Together with Silicon Valley technology, business, media, and venture capital leaders, he built ITU as a solution for graduate students looking for practical, industry-relevant training.

In February 2013, ITU received regional accreditation from the WASC Senior College and University Commission (WSCUC). Now in its 25th year, the University offers ten accredited graduate degrees through six departments of study. Today, ITU continues to provide its students an industry-relevant education that focuses on cross-disciplinary studies and practical work experience. ITU faculty have worked at leading Silicon Valley institutions such as NASA, Google, Intel, and Oracle; and its alumni have had successful careers in companies such as Microsoft, Hewlett Packard, Cisco, among others. Currently, more than 1,000 graduate students from over 54 countries are enrolled in the university, making it a dynamic and exciting place to work and study.
“We are now in the new millennium with the challenge of solving contemporary problems while achieving the unfinished agenda of the future. Modern society must engage in a constant search for the good in its quest for the better.”

Dr. Shu-Park Chan
ITU Founder & First President
1929-2013

A role model to many, Dr. Shu-Park Chan was a bold visionary, a passionate leader in education, and a warm builder of community.

Major Milestones:
- 1929—Born in Canton, China as the 10th son of famous Chinese general Jitang Chen
- 1955—Graduated from Virginia Military Institute with a bachelor’s degree in Electrical Engineering
- 1962—Graduated from University of Illinois, Urbana-Champaign with a Ph.D. in Electrical Engineering
- 1962—Joined Santa Clara University as a Professor of Electrical Engineering and taught there for over thirty years
- 1972—Co-wrote the textbook Analysis of Linear Networks and Systems: A Matrix-Oriented Approach with Computer Applications, one of his many research publications
- 1989—Became Dean of the School of Engineering at Santa Clara University
- 1993—First Asian American appointed to the Fulbright Scholarship Board
- 1994—Founded International Technological University and served as President until 2011

Degrees Offered
- Master of Business Administration
- Master of Science in Computer Engineering
- Master of Science in Computer Science
- Master of Science in Digital Arts
- Master of Science in Electrical Engineering
- Master of Science in Engineering Management
- Master of Science in Information and Cybersecurity
- Master of Science in Software Engineering
- Doctor of Business Administration
- Doctor of Philosophy in Electrical Engineering
- Doctor of Philosophy in Interdisciplinary Sciences

WSCUC Policy On Teach-Out Plans and Agreements
An institution accredited by the Commission must submit to the Commission for its prior approval a teach-out plan or agreement upon the occurrence of any of the following:

1. The Secretary of Education notifies WSCUC that the Secretary has initiated an emergency action against an institution in accordance with section 487(c)(1)(G) of the HEA or an action to limit, suspend, or terminate an institution participating in any Title IV, HEA program, in accordance with section 487(c)(1)(F) HEA, and that a teach-out plan is required.
2. WSCUC acts to withdraw, terminate, or suspend accreditation or candidacy of the institution.
3. The institution notifies WSCUC that it intends to cease operations entirely or close a location that provides one hundred percent of at least one program.
4. A state licensing or authorizing agency notifies WSCUC that an institution’s license or legal authority to provide an educational program has been or will be revoked.

A teach-out plan means a written plan developed by that institution that provides for the equitable treatment of its own students if an institution, or an institutional location that provides one hundred percent of at least one program, ceases to operate before all students have completed their program of study, and may include if required by the institution’s accrediting agency, a teach-out agreement between institutions. A teach-out agreement means a written agreement between two institutions that provides for equitable treatment of students under these circumstances. WSCUC may require an institution to enter into a teach-out agreement as part of its teach-out plan.

When an institution enters into a teach-out agreement with another institution, the initiating institution must submit the agreement to the Commission for approval prior to its implementation. The teach-out agreement may be approved only if the agreement is between institutions that are accredited by a nationally recognized accrediting agency; and

1. Must be consistent with applicable standards of accreditation and Commission Policies;
2. Must provide for the equitable treatment of students by ensuring that the teach-out institution has the necessary experience, resources, and support services to provide...
an educational program that is of acceptable quality and reasonably similar in content, structure, and scheduling to that provided by the institution that is closing or discontinuing its program(s), to remain stable, carry out its mission, and to meet all obligations to its existing students;

3. Must ensure that the teach-out institution can provide students access to the program and services without requiring them to move or travel substantial distances;

4. Must provide for notification of another accrediting agency if the teach-out institution holds accreditation from that agency; and

5. Must specify additional charges, if any, levied by the teach-out institution and provide for notification to the students of any additional charges.

If an institution the Commission accredits or has granted candidacy to closes without a teach-out plan, the Commission must work with the Department of Education and the appropriate State agency, to the extent feasible, to assist students in finding reasonable opportunities to complete their education without additional charges.

The Commission has adopted Guidelines for Closing an Institution, available from the Commission office.

The University will provide all graduate students currently in the affected programs who have at least 3 hours in the major, an opportunity to complete degree requirements during a “teach out” period. Dean or designees will inform affected students of the program closure and the time within which they must complete the program. Students should work closely with the Office of the University Registrar or designee, who will be knowledgeable about the projected course offerings of the terminated program. New students will not be enrolled in the program. The university will follow all rules and regulations stated by WSCUC and BPPE.

For the fully online degree option to existing university Master’s programs, should it be necessary to teach out the online versions of these programs, the same WSCUC approved policies will serve as a guide, and apply to all students who have enrolled in these programs.

1. Students in the online schedule of offerings will be informed of the teach-out of the fully online versions of the program and a teach-out schedule of online offerings in that program will be promulgated, which will permit students in continuous enrollment to complete the required coursework in the online delivery format.

2. All degree students may complete all degree requirements through on-campus offerings, in either weekend or weeknight schedules or a combination thereof.

3. For all students who cannot complete all course requirements in the teach-out period, a policy to permit students to transfer degree-relevant coursework from other WSCUC or regionally accredited institutions will be adopted to ensure students access to completing course requirements.

4. If needed, and with prior WSCUC approval, an articulation agreement will be developed to allow smooth transfer of ITU students into another regionally accredited university’s graduate programs in that discipline.

5. In exceptional cases, and where needed, individual teach-out plans will be developed for any students in the program for whom the above accommodations do not permit timely completion of their respective degree programs.

University Location
ITU’s location in the heart of Silicon Valley provides access to the most well-known hubs for entrepreneurial activity. The innovative atmosphere of Silicon Valley, and the wider San Francisco Bay Area, provides students with a unique environment from which to draw inspiration. The excitement, innovation, and opportunity in Silicon Valley is dispensed into the classrooms through our reputable faculty members and curriculum. The passion for technology, entrepreneurship, and commerce drives our University.

In March 2015, ITU finalized its move to a new campus in north San Jose, California. Some of the many leading corporations within twenty miles of ITU include HP, Apple, INTEL, Microsoft, Yahoo!, Google, Facebook, AMD, ATMEL, Juniper Networks, Symantec, Cisco Systems, Applied Materials, Adobe Systems, Cadence, Electronic Arts, Oak Technology, Brocade, Nvidia, Synopsis, and IBM. The city of San Francisco, Marin County, Berkeley, Oakland, and the Santa Cruz beaches are all an hour away by bus, train, or car. The Monterey Peninsula, Carmel, and the famous Napa Valley wine country are less than two hours away. Norman Y. Mineta San Jose International Airport is about two and a half miles from campus.

2711 North First Street, San Jose, CA 95134

Fax: (408) 331-1026
www.itu.edu
Rolling Admissions
Applicants may apply for admission into any of the trimester terms (Fall, Spring, Summer) each year. Completed applications are reviewed on a rolling basis during the admission cycles. While the rolling admission policy for all trimesters is ongoing, new students are encouraged to apply as early as possible to ensure timely admission decision and paperwork processing.

Master's Degree Program Admissions Policy
Students applying for admission into ITU master’s degree programs are expected to demonstrate the knowledge, skills, and experience necessary to succeed in a rigorous graduate educational environment. As such, successful applicants who are admitted to the University should have earned (the equivalent of) a US bachelor’s degree with a cumulative 2.75 GPA or above, or (the equivalent of) a US master’s degree with a cumulative 3.0 GPA or above. Degrees earned in the United States must be from a regionally accredited US institution. In some cases, ITU may also consider other evidence of readiness for academic studies at the graduate level, including:

1. Outstanding undergraduate work in the major
2. Completion of graduate-level coursework at a 3.0 GPA or above
3. Post-baccalaureate studies
4. Professional certifications

Given the diversity of grading scales and accreditation standards worldwide, ITU requires that any foreign credentials (i.e., undergraduate/graduate diploma and transcript) be evaluated by an approved third-party evaluation service. The University will only accept foreign credentials that are deemed by the approved service provider as equivalent to a US bachelor’s or master’s degree. International applicants will also need to provide proof of English proficiency (see ITU’s English Proficiency policy).

English Proficiency Policy
The ability to communicate effectively in English — to comprehend, read, write, and speak the language fluently — is vital to student success. ITU applicants are therefore expected to demonstrate English proficiency as a part of the application process.

International students whose native language is not English must provide evidence of English proficiency. English competency tests (e.g., TOEFL, IELTS) are designed to provide the Office of Admissions with a guide to measure potential academic success.

Applicants are required to demonstrate English proficiency by one of the following means:

- A TOEFL score of 72 or higher (Internet-based test score (ibt)).
- An IELTS score of 6.0 or higher.

Test scores are valid for two years from the date when the tests are taken. If the test score is older than two years, the student will be required to resubmit a valid test score.

Valid, official scores must be sent to ITU’s Office of Admissions directly from the testing service. If a TOEFL score is being sent, ITU’s institution code is 4446. If you are sending an IELTS score, please be sure to select ITU from the list of available institutions.

Non-US citizen students who are currently residing in the U.S. and seeking to transfer to ITU may demonstrate English language proficiency as described above.

International students may be exempted from the English proficiency requirement under the following circumstances:

1. The applicant has earned an undergraduate degree from a regionally accredited institution in the U.S. The undergraduate degree must consist of a minimum of 120 trimester credit hours, with the majority of credit hours earned in the U.S. from a regionally accredited institution. Waivers will not be considered for credit hours earned at a branch campus in a non-English speaking country or degrees earned through distance learning programs. Credential evaluation may be required for transfer credit hours from foreign institutions.

2. The applicant has earned a graduate degree from a regionally accredited institution in the U.S. The graduate degree must consist of a majority of credit hours earned in the U.S. from a regionally accredited institution. Waivers will not be considered for credit hours earned at a branch campus in a non-English speaking country or degrees earned through distance learning programs. Credential evaluation may be required for transfer credits from foreign institutions.

3. An accredited undergraduate or graduate degree was earned in a non-U.S., Anglophone country, and the language of instruction must have been English. The majority of the credit hours must be earned from an Anglophone institution. Waivers will not be considered for credit hours earned at a branch campus in a non-English speaking country.

Countries that qualify for the waiver include: Antigua, Australia, Barbados, Bermuda, Bahamas, Belize, British Virgin Islands, Canada (except Québec), Cayman Islands, Dominica, Grenada, Guyana, Ireland, Jamaica, New Zealand, Nevis & St. Kitts, St. Lucia, South Africa, St. Vincent, Trinidad & Tobago, Turks & Caicos, and the United Kingdom (England, Scotland, Northern Ireland & Wales).

4. The applicant’s native language is English. Applicants can demonstrate native English language proficiency by providing appropriate documentation.

5. The applicant has completed an accredited ESL program in the U.S., or in a non-US Anglophone country, listed in...
materials may be considered. Only the following meet the minimum academic requirements, supplemental materials may be considered.

- Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) scores recommended. Scores must be sent directly from the testing center.
- Two Letters of Recommendation. Letters should mention the student’s professional and academic experience, as well as their potential to succeed in graduate school.
- Work experience
- Professional achievements

* All documents submitted for admission become property of the University and will not be returned.

Doctoral Level Admissions Application Requirements
ITU’s doctoral programs have extensive program-specific admissions requirements. Students interested in applying for admission into a doctoral program should contact the Office of Admissions for more information.

Master's Level Admissions Application Requirements
All ITU applications must include:

- A completed new student application.
- Sealed official transcripts from all universities attended. Transcripts must be mailed directly from the institution or through an official U.S. e-Transcript provider.
- International Students Only: Foreign credential evaluations for all transcripts must be submitted. Please see http://itu.edu/admissions/approved-credential-evaluation-services for a list of approved foreign credential evaluation services.
- Grade point average (GPA) requirements: A cumulative graduate GPA of 3.0, or a cumulative undergraduate GPA of 2.75.
- Statement of Purpose - an essay describing your personal and professional goals and reasons for obtaining your graduate degree. Minimum of 750 words.
- Resumé-Must not exceed two (2) pages.

SUPPLEMENTARY MATERIALS
Most students who are admitted to ITU do not submit supplemental materials. All of the required documents will be used to evaluate your application. In the case that you do not meet the minimum academic requirements, supplemental materials may be considered. Only the following
official language and language of instruction.

e. Transcript demonstrating the completion of an accredited ESL program in the US, or in a non-US Anglophone country, with a proficiency level equivalent to a B2 or above, according to the Common European Framework (CEFR).

Note: All documents submitted for admission become property of the University and will not be returned.

Second ITU Master’s Degree Admissions Requirements

At ITU, the term “second master’s degree” is used for students who received their first master’s degree at ITU and would like to pursue a second ITU master’s degree in a different field. Students who completed their first master’s degree at another institution are not considered “second master’s students” at ITU.

Conditional Admission

Current and former ITU students who would like to apply for their second ITU master’s degree must adhere to the current master’s level admissions application requirements and admission cycles.

Students applying for a second ITU master’s degree before their first degree has been conferred are required to submit an official ITU transcript and must be in good academic standing. If all admission requirements are met, these applicants will be offered a “Conditional Admission.” Upon completion of their first ITU master’s degree, they will be offered full admission and may matriculate into their new program as normal.

Admissions Exceptions

Program Admissions Criteria and Processes: In a unique case beyond the uniform minimum requirements for admission, a department may choose any criteria that is appropriate as a basis for its evaluation. This includes but is not limited to undergraduate and graduate grade point averages, work experience, test scores, letters of recommendations, and evidence of past achievements. Admissions criteria and decision procedures are subject to review by the Exceptions Committee.

Accepting Your Offer of Admission

All newly admitted students who have been granted admission to ITU will need to confirm their intent to enroll in order to secure a seat in their program. It is very important that you secure a seat for the upcoming term by completing the enrollment process as soon as possible. If the enrollment process is not completed, your spot at ITU will be forfeited and you will need to reapply.

Successful completion of the enrollment process will allow students to register for classes, initiate processing of their student ID card, among other services.

Students who are no longer able to attend ITU must contact the Office of Admissions immediately to discuss options (see Deferred Admissions). If the student has registered for classes already, the student must drop those courses in order to receive a refund. Some fees are non-refundable. If the student does not defer their enrollment and decides later in the future to attend ITU, the student must reapply for admission and meet the admission requirements and deadlines as stated above.

Refunds pertaining to add/drop policy follow strict deadlines as per ITU registrar. Please visit refund policy page for more info: https://www.itu.edu/financial-resources/refund-policy

International students should also contact the International Students Office.

In cases where a student meets the academic requirements for admission to ITU, but experiences delays in supplying supplemental documentation to support their application, the Admissions Exceptions Committee may grant a provisional admission for the student to enroll for the first term. The student would receive an acceptance letter that describes the necessary provisions for completing the admission process and sets a deadline for the student to complete those requirements. The official admission will not be granted until the necessary items, such as an official final transcript showing award of the bachelor’s degree or master’s degree, are received.

All admission provisions must be cleared by the end of the first trimester of enrollment. In order to avoid any difficulties, students are strongly encouraged to meet the terms of their provisional admission prior to the start of the anticipated trimester. If a student fails to clear their provisional status by the end of the first enrolled term, an administrative hold will be placed on their academic record, which may result in their inability to register for classes and/or continue their graduate studies in future terms. The Office of Admissions will monitor provisionally accepted students and notify the appropriate departments about students who do not complete their requirements. The University retains the right to rescind admissions decisions and cancel registration for any student who is found not to be eligible after final admissions documentation has been evaluated.
Deferred Admission
If you have been admitted to ITU, but can no longer enroll by the start date, you may wish to postpone your admission until the next entry term. Once admitted, you can defer your admission only once; after that you must re-apply. Students must pay their enrollment deposit before they are eligible to request a Deferred Admissions. Submitting a request for deferral is not a guarantee of approval. Upon approval of deferment, please note you may not enroll in another academic program at a different college or university, during your deferment period.

A completed Admissions Deferral Request Form must be submitted to the Office of Admissions. Please contact admissions@itu.edu for deferment deadlines.

F-1 International Students who are currently in the U.S. who apply for deferment must be able to maintain lawful F-1 status within the 5-month maximum transfer time between schools. F-1 international students physically residing outside the U.S. may also apply for deferment. Students should speak with an International Student Advisor at ITU to defer admission.

Transfer Credit Policy
Applicants who have taken graduate-level courses at other regionally accredited US colleges and universities may, at the time of application for admission, petition to transfer course credit hours towards their ITU degree program. The relevant Department Chair grants final approval, subject to the following criteria:

- A grade of B or better in the course is required for any credit hours to be transferred.
- No more than 9 graduate level credit hours may be transferred from other regionally accredited US colleges and universities.
- Courses transferred must be substantially equivalent to courses offered at ITU.
- The courses to be transferred may substitute for electives but not for core courses in the ITU degree program.
- Grades from previous institutions will not be transferred and will not affect GPA.
- In no case will a petition for transfer credit be considered later than the end of the first trimester of a student’s enrollment.
- Duplicate course credit hours for the same degree are not permitted at ITU

Admission Policies For Recipients Of Three-Year Bachelor’s Degree Or Equivalent
Individuals who have earned a three-year Bachelor’s degree or a three-year diploma from an institution recognized by the Ministry of Education or corresponding governmentally approved higher education authorizing agency in their respective countries may apply for admission to the relevant Master’s degree program at ITU, provided that specified, additional preparatory work* is completed.

Applicants who have earned an Associate’s degree and who have completed ninety credit hours or more of coursework in a regionally accredited U.S. community college or from a regionally accredited U.S. university may also apply for admission to the relevant Master’s degree program, provided that specified, additional preparatory work* is completed.

For each applicant who lacks the equivalent of a relevant U.S. Bachelor’s degree, an evaluation of the applicant’s undergraduate transcript(s) will be conducted by the appropriate Department Chair or designee, who will determine what additional coursework must be completed for the applicant to be sufficiently prepared to pursue graduate coursework in that field of study.

Students will be eligible to take graduate courses at ITU concurrently with the additional preparatory work. However, the additional required preparatory work will be completed prior the pursuit of any advanced coursework in that program for which the required foundational coursework is determined to be a prerequisite.

*Note: Required additional preparatory coursework may be taken at ITU or at an approved, regionally accredited US community college or university

1 Based on full-time registration of nine (9) credit hours. Tuition per credit hour is $600.
2 Registration Fee is $50 per trimester. Late Registration Fee is $100 (applies to students who register for classes during the Late Registration Period).
3 Fees are non-refundable once students register for classes.
4 Fees may be refundable if all of the requirements are met. Please refer to the ITU website for information regarding Mandatory Health Insurance, waiver and refund. Rates subject to change per insurance carrier notice.
5 ITU is required by the City of San Jose to issue VTA passes to all enrolled students. Rates are subject to change by VTA.
6 Fees are non-refundable.
7 The Orientation Fee covers the New Student Orientation event, as well as pre-arrival assistance and services.
8 Based on full-time registration of nine (9) credit hours for coursework. Full time for dissertation portion of the program is at three (3) credit hours per trimester (not shown in sample tuition and fees table). Tuition is $1,000 per credit hour. Late Payment Fee will be applied one (1) month after the first day of the trimester if there is an outstanding balance on the account and the student has not signed up for an installment plan.
9 Students are responsible for payments of all tuition and fees. ITU reserves the right to adjust the above schedule of fees at any time. Refer to our website for the latest fee table.

Course Materials And Services Fees
Students may be charged fees in some courses for the use, rental, or consumption of materials, tools, or equipment, or for the costs of materials or services necessary to provide a special supplemental educational experience. For example, course materials fees may cover the purchase of chemicals and glassware for a science laboratory or art supplies for an art studio class. They might also cover film rentals, field trips, or the purchase or rental of specific equipment. Courses that may be subject to the course materials fee are listed in the Class Schedule at [http://itu.edu](http://itu.edu).

PAYMENT DUE DATE
Tuition and fees for each trimester are due in full upon registration of courses, unless the student has enrolled in one of ITU’s approved payment plans. ITU reserves the right to deny enrollment or cancel enrollment for students whose tuition and fees are not paid in full.

Accepted Forms Of Payment
- Pay Online at MyITU: ([https://my.itu.edu/ics](https://my.itu.edu/ics))
  - Credit/Debit Card
  - eCheck
- Pay in person at Accounting Services with:
  - Cash
  - Credit/Debit Card
  - Cashier’s Check, Money Order, Traveler’s Check
  - Personal Check
- Pay by international wire transfer, credit card, Alipay, or Unionpay:
  - Visit the [Flywire](https://www.flywire.com/pay/itu/) website to pay via wire transfer or other international payments.
- Pay by Tuition Payment Plan:
  - Installment Plan
    - Plan allows tuition to be paid in two to three payments over the first two months of the term.
  - Employer Tuition Reimbursement
    - For a student who participates in a tuition reimbursement program through his/her employer, this plan allows a qualified participant to defer university tuition payment until such time as they qualify for their employer reimbursement.
Instalmentation Plan Policy

• Each installment plan is subject to a per trimester Installement Plan Administration Fee of $100.

• Installement Plans are only offered to students with good financial standing with ITU. Students who have a bounced check record on their account due to non-sufficient funds are not eligible for any installment plans for the remainder of their tenure at ITU.

• Students are responsible to make sure they have enough money in their bank account for the post dated checks. If a student drop a class after the third week of the trimester, the student will still owe all outstanding balances and any default on payment will be subject to collection.

• Any student who wishes to pay using an installment plan must download, print, and complete a Promissory Note, and bring the completed form to the Department of Accounting Services.

• Each installment plan consists of a minimum of two (2) to a maximum of three (3) installments.

• Students must submit all their installment plan checks along with their first payment. The checks should be post-dated and will only be deposited on the day the installation is due. If the due date falls on a weekend or holiday, the check will be deposited the following business day.

• The installment plan process is not completed until the Installement Plan Promissory Note and all post-dated checks have been submitted to the Department of Accounting Services.

• Students who wish to cancel an installment check or switch payment, must contact the Department of Accounting Services and complete the process prior to the installment due date.

Installment Plan Payment Schedule:

• The first installment is due on the day of registration, and the amount must be equal to or greater than three (3) credit hours of tuition in addition to all of the mandatory fees, including student health insurance.

• The second installment is due one (1) month after the first day of trimester, and the amount must also be equal to or greater than three (3) credit hours of tuition.

• The third installment is due two (2) months after the first day of trimester. Any remaining balance must be paid with this final installment.

VTA fees listed in examples below is the rate for continuing students in the Fall 2019 trimester, and may differ depending on the trimester and whether the student is receiving his/her VTA pass for the first time. The CA (California Resident) discount is available to students who reside in California and are U.S. Citizen or Permanent Resident (Green Card). Please contact the Department of Accounting Services for more information on how to apply for the discount.

Fees are subject to change, so the total amount for installment plan may change over time.

INSTALLMENT PLAN EXAMPLES:
The example below assumes a student registers for 9 credit hours in a trimester and already has existing health insurance coverage. Students must submit a waiver every trimester to prove existing coverage; otherwise, the student will be automatically enrolled into ITU’s student health insurance plan and billed accordingly. Student health insurance payments must be paid along with all other fees on the first installment payment. For more information on student health insurance requirements and waiver information, please visit the Student Health Insurance section of the ITU website.

Note: There is a $50 fee for switching payments if you decide to substitute an installment check with another form of payment on or before the due date of the installment, unless your installment plan has 3 installments AND you are settling your entire Installment Plan balance before the second installment due date.

---

**Employer Tuition Reimbursement Deferred Payment Plan (ETR)**

1. **Plan Overview**

   International Technological University (ITU) has established a deferred payment plan for students who qualify for tuition reimbursement from their employer. Employer Tuition Reimbursement Deferred Payment Plan (ETR) is designed for eligible students whose employers offer reimbursement for tuition charges.

   Students accepted into the plan may defer payment of the portion of their tuition reimbursement under their employer’s program up to six weeks after the last date of trimester. Any portion of tuition and fees not covered under an employer tuition reimbursement plan will be due upon registration.

   Students may apply for the ITU Installment Payment Plan to cover any tuition and fees not included in the ETR. Please refer to our website for all installment plan information.

   Failure to pay or have an installment plan arrangement in place may result in a financial hold that will prohibit release of official transcript and enrollment.

   Applications for the ETR have to be submitted and approved by the Department of Accounting Services each trimester. ITU has three trimesters, namely: (a) Spring Trimester from January through May, (b) Summer Trimester from May through September, and (c) Fall Trimester from September through January.

   It is important to remember that the student is personally responsible for any and all financial obligations made to ITU, regardless of employment status or the length of time it will take the employer to process reimbursement. ITU does not bill a student’s employer; the student is responsible for providing employer with the reimbursement information.

   In order for the employer to receive confirmation of student grades, an official transcript request must be requested. Transcript requests are submitted by completing the Official Transcript Order Form which is available on the ITU website under Forms. The transcript will be sent to the address provided on the form after the associated transcript fee is paid.

   The student is responsible for the amount deferred six weeks after the end of term, whether or not the amount is to be paid by the employer.

   If the employer, for any reason, refuses to reimburse the student’s tuition, the student remains responsible for the full payment of all tuition and fees to ITU. ITU reserves the right to cancel the plan, if the information provided on the application is false.

2. **Eligibility**

   The ETR is available for students working in a company with an Employee Education...
Assistance/Reimbursement Plan, who have a portion, or 100% of their tuition reimbursed directly to them by their employer upon successful completion of coursework.

The ETR is only applicable to ITU students who are already authorized to work legally in the U.S. Students attending ITU on an F-1 student visa are not eligible to use this plan, as their visa status requires that they show proof of ability to pay for their studies independent of any on campus employment, Curricular Practical Training (CPT), or other work authorization. On the date of application, the student must not have an outstanding account with ITU exclusive of an installment payment plan.

Students must complete and submit all required documents during the regular registration period. Applications submitted during the late registration period will be subject to an additional late processing fee.

Maximum deferral amount allowed for the calendar year should not be greater than the annual maximum limit reimbursable by the employer. There is no prepayment penalty.

3. Process
   i. Visit http://itu.edu/regulations/ETR.
   ii. Submit completed Employer Tuition Reimbursement Deferred Payment Plan Application Form and Statement of Financial Liability within ITU’s regular registration period.
   iii. Along with the completed forms in #2, student must also provide a letter from the employer’s Human Resources department confirming current employment, a copy of the student’s employer education assistance/reimbursement plan, and check or cash to pay the non-refundable $50 ETR processing fee.
   iv. ETR applications submitted during the late registration period (See the University Calendar) will be assessed an additional late processing fee of $50.
   vi. Submit the completed application form along with the $50 nonrefundable ETR processing fee and proof of employment to ITU, Department of Accounting Services, Accounts Receivable, at 2711 N. First St., San Jose, CA 95134.
   vii. For the most updated information, please visit http://itu.edu/regulations/ETR

Non-Payment Policy
Upon registration of courses, a student must either (a) pay tuition in full, or (b) apply for an ITU Payment Plan. Failure to do so will result in a financial hold being placed on the student’s account, restricting the student’s ability to add and drop courses on MyITU or to request official transcripts. The financial hold is automatically removed from the student’s account once full payment is made.

A Late Payment Fee will be applied one (1) month after the first day of the trimester if there is an outstanding balance on the student account and the student has not signed up for an installment plan.

ITU reserves the right to drop courses and terminate students due to nonpayment of tuition and fees.

Refund Policy
1. Students will be given a 100% refund if a class is cancelled by the University.
2. Refunds are calculated using one of the following methods:
   a. The time and date the class was dropped by the student on my.itu.edu/,
   b. The time and date the student requested a class to be dropped by the Office of the Registrar on their behalf, if the student was unable to drop the class by themselves on my.itu.edu/.
3. Depending on the original form of payment, the following refund methods will be used:
   a. Online credit card payments will be refunded back to the same credit card account. In the event we are unable to refund back to the credit card, a refund check will be issued.
   b. Cash, Check, Cashier’s check, E-check, Traveler’s Check, and Money Orders will be refunded via check.
   c. flywire.com/pay/itu/ payments will be refunded to the original bank account via flywire.com/pay/itu/.
   d. Please allow 3 to 5 weeks of processing time.
ITU’S REFUND SCHEDULE IS AS FOLLOWS:

<table>
<thead>
<tr>
<th>CLASS DROP DATE</th>
<th>REFUND PERCENTAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior to the start of the trimester:</td>
<td>100%</td>
</tr>
<tr>
<td>During the add/drop period (ending the second Sunday from the beginning of the trimester at 11:59PM):</td>
<td>100%</td>
</tr>
<tr>
<td>During the third week of the trimester (ending the third Sunday from the beginning of the trimester at 11:59PM):</td>
<td>80%</td>
</tr>
<tr>
<td>After the third week of the trimester:</td>
<td>0%</td>
</tr>
</tbody>
</table>

FINANCIAL ASSISTANCE
International Technological University does not currently participate in any federal or state financial aid programs. In order to ease the burden of a single lump sum tuition payment, the University offer payment plan options. Please refer to the Payment Plan section for more information.

SCHOLARSHIPS
International Technological University offers Merit Based Scholarships to a select number of students every trimester. Visit [http://itu.edu/admissions/financial-resources/itu-scholarship](http://itu.edu/admissions/financial-resources/itu-scholarship) for more Information.

DISCOUNTS
Discounts are available for qualifying students. Please contact Accounting Services for more information regarding the CA Resident, Chamber of Commerce, Veteran, or Police/Firefighter/EMS discounts.

Form 1098-T

The Form 1098-T is used by eligible educational institutions to relay information about their students to the IRS, as required by the Taxpayer Relief Act of 1997.

Every year, ITU will automatically generate Form 1098-T for students who are either U.S. citizens or U.S. residents, or international students who fulfill the following criteria:

a) have a valid social security number or ITIN on record with ITU;

b) have made payments for 1098-T eligible tuition and fee charges in the reporting year.

To submit a social security number or ITIN to ITU, the student must complete a Form W-9S by providing their full legal name, current mailing address, SSN / ITIN, and student ID number. The form can be found on the IRS website at the address below:

Every year, ITU will solicit Form W-9S from students who do not have an SSN or ITIN on record. In order for ITU to issue a Form 1098-T, a Form W-9S with the correct information must be received by the university by December 31st of the current reporting year.

Please do not email the Form W-9S; any forms sent via email will not be accepted. Due to highly sensitive information on the W-9S, it must submitted to Accounting Services by one of the following methods:

1) Mail to:
   2711 N 1st Street
   San Jose, CA 95134
   or
2) Fax to:
   (408) 400-2271
   or
3) Submit it in person to the Accounting Services window at the ITU campus

LATE FORM W-9S SUBMISSIONS
The deadline for universities to issue Form 1098-Ts is January 31st of the year following the reporting year. The IRS assess penalties to universities for every late Form 1098-T submission. While ITU will honor late requests and issue a Form 1098-T past the IRS deadline, ITU will assess a $50 late Form 1098-T request fee to offset the IRS penalty. Any initial Form W-9S submitted after December 31st of the calendar year requested is considered a late request, and will have this fee assessed.
The Department of Academic Support Services is here to serve students and guide them toward educational success during their tenure at ITU. Students receive individual attention in the planning of their degree program and are provided important information regarding deadlines and university policies. Advising is an integral part in assisting students with their decision making when selecting courses toward their career goals and future plans. Advisors can meet one-on-one with students or in a group setting.

We assist students with the following:
- Information about degree program, compliance, integrity, academic regulations and policies
- Information regarding change of program
- Academic evaluation and assessment
- Provide students with preliminary graduation checklist, Petition to Graduate and Reduce Course Load (if applicable)
- Degree planning (Individualized Learning Plan)
- Academic Probation
- Liaison between students and faculty members
- Improving skills/strategies
- Time management skills
- Resources to help students be successful
- ITU Scholarship information

Library
The ITU library’s role is to help students and faculty become scholarly and ethical users of information and research sources.

The on-site library is staffed 7 days per week until 7 or 8 pm each day. Library staff will help students, faculty, staff and alumni access to scholarly books, open educational resources (OERs), textbooks, laptop loans, journal articles, proceedings, electronic databases, theses, student projects and other media.

The University Librarian is a member of the ITU Academic Leadership Council (ALC) to help faculty select and promote information literacy and scholarly information access.

Academic honesty is taken seriously at ITU. Please read the ITU Plagiarism Prevention Policy.

ITU gives faculty and students a ‘turnitin’ account, the University standard for plagiarism checks. Students need to request this access from their professor. Professors must submit an EMS ticket to have their class account created. This is necessary to give students in the class access.

The ITU Copyright Policy must be complied with by all students. See the ITU “Copyright and Compliance” on the ITU Library Website for supporting resources.

Bi-weekly Webinars about plagiarism, copyright, research writing and database searching are provided bi-weekly and slides are uploaded to the library website.

Summary of ITU Library Services
1. The ITU library website also assist with style guides and templates, and assistance with library logins. Use ‘Advanced Search’ to isolate ITU “Projects”, “Theses”, “Course Reserves”, etc.
2. Library Pocket Guide:
3. ITU Style Guides:
   a. Masters Thesis Guidelines
   b. Doctoral Guidelines
   c. APA Style Guide
4. Research consultations and assistance are available from the on-site reference desk and library contact email library@itu.edu. Students should schedule at least one consultation per semester
5. ITU Library Catalog: Use the “Advanced Search” option to search for books, course reserves, Capstone and other materials held in the ITU on-site library.
6. Course Reserve Books: See the ITU Library Catalog and the ITU Library Website. And Course Reserves Policies
7. Loans and circulation: Read the ITU Library Borrowing and Course Reserves Policy
8. Other Libraries: See ITU Library Website:

Student Life and Campus Recreation
ITU prides itself on offering a balance between what goes on inside and outside of the classroom. The University strives to create an environment that encourages social interactions with fellow students and the ITU administration. Student Life events give you the opportunity to forge friendships and join clubs while preparing for your career. Student Life has various events throughout the year. Events have included the ITU Cultural Fair, where ITU’s diversity is celebrated, ITU’s Got Talent, where student talents are showcased in the form of performances and artwork, Build & Pitch Hackathon, where inter-departmental innovation is encouraged, and Family Fun Day, a family friendly event for students, faculty, and staff.

Student Life also celebrates various events throughout the year to acknowledge cultural holidays such as the Autumn Moon Festival, Valentine’s Day, Holi Festival, and St. Patrick’s Day.

As an ITU student, you can learn leadership skills as a student government association representative, meet new people at student mixers, and attend career driven workshops. In addition, ITU facilities offer open collaborative spaces for group projects, a student common area with a pool table and ping pong table, and dance/yoga studio. Classrooms contain a projector, ergonomic tables and chairs, accessible outlets, a desktop computer, and wifi access that can be used during instruction. Students at ITU are free to organize and join associations whose stated purpose is consistent with the university’s mission. All student organizations seeking ITU support must be registered.

Student Government
The Student Government Association (SGA) exists to serve, advocate for, and lead the student body with dedication to unity, teamwork, diversity, honesty, transparency, mutual respect, and creativity. SGA commits to being a voice for all students as well as a committed group of leaders among the ITU community.

SGA membership consists of four elected executive positions as well as a group of representative members. Each member is committed to serving students through hands-on assistance, and collaboration with ITU leadership. Experience as an SGA leader not only helps ITU become a better place, but is also an enriching part of your academic life. As a member of the SGA you will gain valuable leadership and communication skills. These transferable skills can be used at companies the world over, with many former SGA members going on to successful careers in industry.

VTA Program and public Transportation
As part of ITU’s commitment to the City of San Jose, the Valley Transportation Authority (VTA) program is a Transportation Demand Management Plan to mitigate the traffic impact of the campus location and operations. The VTA program requires mandatory participation of all students, and that ITU cannot profit from sales or replacement of passes. Students on leave of absence, trimester break, or alumni are not eligible for the program. The VTA Smartpass provides enrolled students unlimited rides on VTA bus and light rail lines (less express bus service), when used in conjunction with an ITU student identification card.

The VTA fee is a mandatory and non-refundable fee for all students. The fee must be paid, regardless of whether a student chooses to request and/or use pass. The fee is subject to change based on ITU’s annual contract with VTA.

Students can obtain more information about the VTA program, and how to request and use their Smartpass by visiting the ITU website (students/vta) or the campus Information Center.

The University campus is conveniently located near the Bonaventure light rail stop. Bus and light rail schedules can be found on the Santa Clara Valley Transportation Authority website (VTA.org), and on campus.

Other notable modes of public transportation NOT covered under the VTA program include:
   • Bay Area Rapid Transit (BART) http://www.bart.gov/ is a train that provides clean, scenic service from Fremont, Richmond, Berkeley, and San Francisco.
Services staff work one-on-one with students, internship providers, and employers to assist students in obtaining quality positions in industry both before and after graduation. On-campus open drop-in hours are held weekly and students may also email careerservices@itu.edu to schedule live or virtual appointments as needed. Additionally, ITU offers various on-campus industry, and employment events including an annual career fair, targeted employer engagement events, and regular industry group meetings and speaker events.

**Bereavement Policy**

Students experiencing a death in the family should contact the Department of Academic & Student Services in order to request a Standard Bereavement Leave or a Bereavement Leave of Absence:

**STANDARD BEREAVEMENT LEAVE** — Upon approval from the Department of Academic & Student Services, the student is allowed 14 consecutive days of excused absence. Dates are specifiable by the student. The student would still be required to complete all course requirements.

Note: International students must file a Travel Request Form with the International Student Office if they are leaving the country.

**BEREAVEMENT LEAVE OF ABSENCE** — Should a student feel s/he needs more time than the allotted 14 consecutive days, students may withdraw from the trimester in which the death occurs.

In consultation with the Department Chair and academic advisor, students in good academic standing may:

- Drop currently enrolled courses without any notation on the academic record, if within ITU’s add/drop period;
- Withdraw with a W notation from currently enrolled courses, if prior to the Withdrawal deadline; or
- Receive an incomplete (INC) grade for currently enrolled courses and have the opportunity to complete any missed exams and/or assignments in the following trimester in which they return. In the instance that the instructor is not available to teach in the following term, the student’s Department Chair may assign another instructor to assist the student in finishing the course. Further extensions beyond the following trimester may be granted under special circumstances.

Note: International students who leave the country for more than 30 days must file a Leave of Absence Request Form with the International Student Office. Students leaving the country are advised to meet with the International Student Office prior to their departure.

Once a Standard Bereavement Leave or Bereavement Leave of Absence has been received and approved:

- The Department of Academic & Student Services will notify the student’s academic advisor who will communicate with the Department Chair, instructors for currently enrolled courses, and any other relevant offices to facilitate the leave.
- Instructors will be advised that excused absences and
extensions should be granted to the student for the time of allowed leave.

Typical Bereavement Leave is reserved for deaths within the student’s immediate family, but students may petition for the right to implement the Bereavement Policy in the event that a death occurs outside their immediate family. Immediate family is defined as: Spouse, Grandmother, Grandfather, Mother, Father, Sister, Brother, Child, Stepmother, Stepfather, Stepsister, Stepbrother, or Stepchild. ITU reserves the right to request documentation, such as an obituary, verifying the death.

Information And Call Center
The Information and Center is an essential part of the everyday functions of the University. Information Representatives strive to give students the best available information in a prompt, efficient and professional manner. Representatives greet students on campus, guide them through university processes, direct students to appropriate offices for assistance and utilize the Student Support Ticket System, view open tickets, manage inbound calls, and schedule student appointments for the International Student Office, Academic Advisors, and Outreach for either on campus or SKYPE. Students can pick-up documents, student ID cards, and VTA Smartpasses at the Reception Desk, located next to Accounting Services. Please check the ITU website for open hours, document pick-up procedures, and contact information.

ITU Student ID Card
To enhance the safety and security of personnel on campus, all enrolled students are required to have a student ID card. Student ID cards provide personal identification; access to facilities, equipment rentals, library books; admittance to student sponsored events; records for attendance; and used for document pick-up.

Students should always carry their ID card when on campus, as the ID card is required for class attendance and demonstrate authorization to be on campus. Students may be requested to identify themselves to a university faculty member, staff member, or authorities through their ID card.

New students will receive their first ITU student ID card at no charge. It is highly recommended that new students obtain their student ID card prior to orientation, after class registration and payment of balance due. Students must bring a government-issued photo identification (state driver’s license or passport) and proof of tuition payment, in order to receive their ID card. Replacement fees apply.

Student identification card remains the property of ITU. Services rendered by the card are non-transferable to other individuals; only the name cardholder can access student privileges at the university. Unauthorized use or altering of the card in any way, including using another student’s card or allowing someone else to use one’s card, may result in disciplinary sanctions.

Violations of policy may result in disciplinary measures in accordance with the Student Code of Conduct, Article IV. Student who lend their card to another for the sole purpose of accessing university facilities and/or falsifying the attendance system will be recommended for disciplinary sanctions. See ITU website for more information.

ADA Procedures
International Technological University is committed to providing a quality and accessible educational environment to all students. In accordance with Section 504 of the Rehabilitation Act, the American with Disabilities Act (ADA), the ADA Amended Acts (ADAA), and associated California laws and regulations, no qualified individual with a disability shall be excluded from participation in our university programs or activities based solely on their disability. Students seeking reasonable accommodations for documented conditions or disabilities, including: physical, psychological, medical, sensory or learning, or otherwise; may submit a request via the online student services ticketing system located on the support page on the ITU website at https://ituedu.zendesk.com/hc/en-us/requests/new?ticket_form_id=61345.

Students in need of accommodations due to a disability should contact the Office of Student Services for verification and determination of reasonable accommodations as soon as possible following admission to the University or in the weeks prior to the first day of classes for each Trimester.

To submit an accommodation request or for additional assistance or inquires, please submit a ticket at https://ituedu.zendesk.com/hc/en-us/requests/new?ticket_form_id=61345 or email studentservices@itu.edu for additional information.
Registration
The registration period for each trimester begins six weeks prior to the first day of the trimester and concludes on Friday, one week prior to the first day of the trimester. A student is considered enrolled in the University if registered for a minimum of one credit-bearing course. Students enroll in classes through the MyITU portal, which is accessible at https://my.itu.edu/ics.

LATE REGISTRATION
Late registration occurs during the week prior to the start of the trimester. A late registration fee is applied if the student has not registered for at least one credit-bearing course during the registration period.

ADDING AND DROPPING COURSES
Students have an opportunity to adjust their course schedules without penalty as long as they do so during the Add/Drop period. The Add/Drop period begins with the first day of the respective trimester and concludes at 11:59 p.m. (PST) of the second Sunday following the first day of the trimester.

Withdrawals
The university withdrawal period runs from the Monday following the end of the Add/Drop period through 11:59 p.m. (PST) of the Sunday that concludes the 9th week of the trimester. Dropping a course during the withdrawal period results in a grade of W (Withdrawn).

Dropping a course after the conclusion of the university withdrawal period will result in a grade of F (Fail) or NP (No Pass). Dropping a course after the last day of the class is not permissible.

See Attendance Policy for Unauthorized Withdrawals (UW) in the Academic Policies section.

Exception: Dropping a CFL course after the first day of instruction for that course section will result in a grade of W (Withdrawn). Dropping a CFL course after the second day of instruction for that course section will result in a grade of NP (No Pass).

Note: Refer to the Refund Policy under Financial Information for applicable dates and deadlines.

Course Cancellation
Courses with enrollment of less than 10 Students by the first day of the trimester, are subject to cancellation.

Auditing Courses
Auditing a course is an option that allows the student to sit in on the course without receiving academic credit or a grade. The student is not required to complete course assignments, though he or she may do so with the permission of the instructor. A grade of AUD (Audit) is assigned to the course and recorded on the academic record. Courses taken for Audit do not apply toward any academic degree, and do not count as part of a student’s course-load. The tuition for an audited course is 50% of the tuition for a credit bearing course. Requests for auditing a course require approval of the instructor and must be made before the end of the Add/Drop period.

Course Load
The maximum course load for any graduate student in one trimester is twelve (12) credit hours. Continuing students are eligible to register for a maximum of twelve (12) credit hours during the registration period. Students wishing to register for the thirteenth (13th) through fourteenth (15th) credit hours must follow registration procedures, as prescribed by the Office of the University Registrar and administered by the Academic Advising department.

Online Courses
This policy applies, beginning Spring 2017, to all newly admitted degree seeking students. In addition, the cap referred to in the policy requires that current students may not register for additional online courses if by so doing they will reach the 50% limit.

ONLINE COURSE LIMIT
Degree seeking ITU students may take online courses, subject to the requirements of their program and immigration status.

Online course credit hours must constitute less than 50% of total credits counted toward degree completion. ITU’s Master’s programs typically consist of 36 credit hours or 12 courses.

Therefore, no more than five 3 credit hour courses may be taken online, out of a total of 12 courses.

Declaring or Changing a Concentration
(For MBA Program Only)
Concentrations may be declared, starting at the point of admissions. If a student does not declare a concentration during the admissions process, the student will be enrolled in the general degree program. Students may add or change their concentration at any point before the completion of 19 credit hours. Any approved transfer credit will be counted towards the 19 credit hours. Requests to declare or change concentrations must be made by the first day of the trimester in which the student will attempt the 20th credit hour in order to be considered.

If a student has declared a concentration and does not complete the required concentration courses by graduation, the student will graduate with the general degree, with no concentration. Concentrations will only appear on the transcript, and not on the diploma.
Credit Measurements
Academic credit hours are measured in terms of credit hours. This is a listing of how Academic credit hours are measured:

- 1 credit hour = 1 trimester term hour
- 1 trimester credit hour = 15 hours of classroom lectures/30 laboratory hours/45 practicum hours

The student must enroll in 9 credit hours to be considered as a full-time student.

Discontinued Grades, as of Fall 2015:

- R – Replaced original grade when course was repeated.
- EXL – Original grade replaced and excluded.
- X – Students did not complete course or officially withdraw.
- NR – No Record

Discontinued Grades will not be included in computing GPA.

Grade Point Average Requirement For Graduation

The following statement applies to the degree program requirements for each program starting in the 2016-2017 catalog.

A minimum 3.0 cumulative GPA is required for granting of the Master’s and Doctoral degree.

GRADE POINT AVERAGE (GPA)

GPA is calculated by dividing the total amount of grade points by the total amount of credit hours attempted.

Only courses in which a student has earned at least a grade of C- or P are counted towards the master’s degree. All registered credit hours are counted as attempted credit hours, and all grades except P, NP, I, AUD, WIP, and UW are used in GPA computation. All courses require letter grades, except those specifically designated otherwise.

GRADE CHANGES

Requests for grade changes must be made no later than 30 days after the first date of the trimester following the trimester in which the course was taken.

Grade change requests will only be considered if the student believes the assigned grade is incorrect due to a clerical, calculation, or other technical error.

Grade change requests that contest the instructor’s judgment regarding the academic quality of the student’s work or achievement will not be considered. Grade change requests that are based solely on the student’s desire to have a better grade will not be considered. Grade change requests that include coursework submitted after the course has concluded will not be considered.

Repeating Courses

A course with an earned grade of B-, C+, C-, D+, D, D-, F, NP, and UW may be repeated for a maximum of two (2) times. A withdrawn (W) course is not counted as a repeated course. Repeating a course is not allowed for courses where an Incomplete (I) grade has been assigned.

Earned course credit will be awarded only once. Grades assigned at each attempt are permanently recorded on the student’s transcript and the term (trimester) GPA will not be modified. The highest grade earned will be used in the cumulative GPA calculation.

Final Grades

Grades will be made available on the MyITU portal following submission by the instructor.

Transcripts

A record of each student’s academic work at ITU is retained permanently by the Office of the University Registrar. For more information on how to request an official transcript and applicable transcript fees, visit the ITU Office of the University Registrar webpage.

Time Limits For Degree Completion

All candidates for master’s degrees must complete all the matriculation requirements within six calendar years after initial registration at ITU. See Doctoral program policy for doctoral degree completion time limits.

Graduation

Each candidate for a master’s degree should submit the Petition to Graduate form along with a Preliminary Checklist signed by an Academic Advisor and deliver to the Office of the University Registrar prior to the start of their final trimester.
Experiential Learning
The university does not award credit for prior experiential learning.

Transferability of Credit Hours
The transferability of credit hours earned is at the sole discretion of the receiving institution.

Class Size Limit
Classes are limited to 48 students per weekday course, and 75 students per weekend course.
FERPA POLICY
International Technological University (ITU) is committed to meeting the provisions established in the Family Educational Rights and Privacy Act (FERPA), which protects the rights of students who are enrolled or who were previously enrolled the University. The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) is a Federal law that protects the privacy of student education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education.

Please contact the Office of the University Registrar for additional information at Registrar@itu.edu.

Academic Probation and Expulsion Policy
ITU exercises a “three strikes” policy when it comes to academic probation, suspension, and expulsion.

- **Strike 1 – Probation I**
  A student whose cumulative GPA is below 3.00 will be placed on academic probation the following trimester. A hold will be placed on the student’s record and the student MUST meet with their academic advisor before they are allowed to register for the next trimester.

  A student on academic probation is not considered to be in “good standing” and has therefore lost the following privileges:
  - Applying for on-campus jobs, including TA positions
  - Applying and participating in internship
  - Receiving an ITU scholarship
  - Running for student government
  - A student on academic probation must earn a GPA above 3.00 the following trimester in order to return their academic status to “good standing.”

- **Strike 2 – Probation II**
  Earning a cumulative GPA that falls below 3.00 for a second time will result in Probation II. A hold will be placed on the student’s record and the student MUST meet with their academic advisor before they are allowed to register for the next trimester. Probation II acts as a final warning before Expulsion.

- **Strike 3 – Expulsion**
  If a student earns a cumulative GPA that falls below 3.00 for a third time, the student will be expelled from the University. Once expelled, the student may not reapply for admission to the University for a period of one year.

Attendance and Participation Policy
All on-campus courses are held at ITU, 2711 N. First Street, San Jose, CA 95134. Attendance is mandatory for all courses at ITU. The university requires all of its students to attend, fully participate, and be engaged in all of the courses in which they are enrolled each term.

For online courses, students’ regular participation online will qualify as “attendance.” Students who miss more than 20% of required attendance will be administratively withdrawn from the course and receive a grade of unauthorized withdrawal (UW). A grade of UW is calculated as an F grade in the grade point average calculation.

Credit Hour Policy
Except as provided in Federal Regulation 34 CFR 668.8(k) and (l), a credit hour is an amount of work represented by intended learning outcomes and verified by evidence of student achievement that is an institutionally established equivalency that reasonably approximates not less than:

1. One hour of classroom or direct faculty instruction and a minimum of two hours of out-of-class student work each week for approximately fifteen weeks for one semester or trimester hour of credit, or the equivalent amount of work over a different amount of time; or

2. At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution, including laboratory work, internships, practice, studio work, and other academic work leading to the award of credit hours.

ITU has adopted the United States Department of Education requirements for “courses offered entirely online and without any required face-to-face class meetings.”

Final Examinations Policy
All classes conducted at the ITU main campus have a mandatory in-class final examination or presentation.

Special Topics Courses For Master’s Programs
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline. While special topics courses may eventually become part of the curriculum, they are intended to be temporary in nature. Consequently, they cannot be required as a core or concentration course, but may be included as an elective for any program.

The specific topic of the course should be offered for one trimester only and will use 688 as the designated course number across all departments.

INCOMPLETE GRADE POLICY
Incomplete grade must be student initiated.

An Incomplete “I” is a temporary grade which may be given at the instructor’s discretion to a student when illness, unanticipated extraordinary circumstances, or other reasons clearly beyond the control of the student prevent completion of course requirements by the end of the term.
Incomplete grades may be given only in the following circumstances:

1. The student’s work to date is passing;
2. Attendance has been satisfactory through at least 50% of the term; an illness or other extenuating circumstance legitimately prevents completion of required work by the due date;
3. Required work may be reasonably completed in time frame agreed upon by the instructor and the student no later than the end of the following trimester;
4. The incomplete is not given as a substitute for a failing grade;
5. The incomplete is not based solely on a student’s failure to complete work or as a means of raising his or her grade by doing additional work after the grade report time frame;
6. The student initiates the request for the incomplete grade before the last day of the class;
7. The instructor and the student submit a Petition for Incomplete Grade form before the last day of the class;
8. In other circumstances, the appropriate grade must be assigned. A failing grade and last date of attendance should be recorded for students who cease attending class without authorization. Students who are unable to complete a course and who do not meet these circumstances should consider dropping course.

9. The following provisions for Incomplete grades apply:
10. It is in the student’s best interest that incomplete grades are made up by the end of the following academic term. Incomplete grades must be made up and final grades submitted no later than the last day of the subsequent term.
11. An Incomplete grade may not be considered passing for purposes of determining academic standing.
12. An Incomplete grade may not be considered for a student in their last term of attendance.
13. Students who have an incomplete grade and who do not submit complete outstanding coursework by the end of the subsequent academic term, will not be eligible for to apply for internship; a part-time or full-time internship, regardless of their cumulative GPA.
14. The Incomplete grade counts toward the student’s attempted credit hours, but is ignored in the calculation of the student’s GPA.
15. The Incomplete grade is expunged from the academic record and the final permanent letter grade is recorded when the final grade is submitted via a Grade Change form.
16. The Incomplete grade is converted to an F, Failing grade, if the student does not submit coursework according to the agreed deadline documented on the Petition for Incomplete form.
17. The Incomplete grade does not apply to courses such as Capstone, Independent Study, Thesis, Internship, CFL, etc.

Independent Study Policy

PURPOSE
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty. Students are limited to 3.0 credit hours of Independent Study toward their Master’s program and 6.0 credit hours towards their Doctoral program and may not take more than one Independent Study in a single trimester.

ELIGIBILITY
Independent Study is available to students who have completed a minimum of 9.0 credit hours and with a minimum cumulative 3.0 GPA. It must be taken within the student’s degree program.

COURSE
The Independent Study course is offered as variable credit within each degree program and area of study. It carries a maximum of 3 credit hours for students enrolled in a Master’s program and 6 credit hours for students enrolled in a Doctoral program per trimester. The course number 689 is used across all departments for Master’s and 891 for Doctoral and uses the appropriate area of study subject code.

GRADING
Independent Study is graded based on the standard ITU letter grade scale A-F (not P/NP).

CONTRACTS
For all Independent Study programs an Independent Study Contract Request Form must be completed and approved by the supervising faculty and the Department Chair. The approved contract is submitted to the Office of the University Registrar for processing. The student’s contract must:

- Present an outline of proposed study, which indicates an amount of work equivalent to the lecture and study 147 time devoted to a standard course. This equates to a minimum of 15 hours per 1 trimester credit hour. The proposal must describe the educational value for the student’s total program of study, the specific objectives, and the justification for enrolling in Independent Study.
- Provide a schedule for meeting with the instructor, for completing assignments/progress reports, for the submission of the final paper or project, and for the criteria used to assign a grade (including specific values if the grade will be based on more than the final paper or project). A minimum of weekly conferences with the supervising instructor is expected, generally on campus. Other arrangements may be made, provided the work may be appropriately supervised.
- Show preparation and competence to do independent work and to address the proposed topic.

Leave of Absence Policies

1. One-Trimester Stop-out
With certain restrictions and exceptions, matriculated students may stop-out from ITU for one trimester in a calendar year and maintain his or her continuing student status. Continuing status includes the maintenance of catalog year for graduation and priority registration privilege. Students who do not continue their studies after a one-trimester absence will be withdrawn from ITU. This section only applies to students in good academic standing. This section does not apply to newly admitted students who have not earned any credit hours at ITU. This section does not apply to F-1 International Students who were issued Forms I-20 by ITU.

2. Personal Leave of Absence
ITU recognizes that a student might find it necessary to interrupt his or her progress toward a degree for various reasons such as medical, family, or other personal causes. To obtain an authorized break from ITU, a personal leave of absence application must be filed with and approved by the Office of the University Registrar. Applicants must indicate in which trimester he or she will continue. The deadline to file the application is the first day of the trimester in which a student would like to begin the personal leave. Upon return from the approved personal leave, the students will retain his or her continuing status, which includes the maintenance of catalog year for graduation and priority registration privilege. However, if the personal leave of absence lasts for more than three (3) trimesters, the students’ catalog year will be automatically changed to the academic year to which the students return. The Office of the University Registrar does not extend an approved personal leave of absence. A new personal leave of absence application is required if a student seeks to return in a later trimester.

Failure to resume studies in the trimester indicated in the application will result in being withdrawn by ITU. Students who wish to continue their studies after being administratively withdrawn must reapply with the Office of Admissions. This section only applies to students in good academic standing. Students are advised that they should pay attention to the time limit allowed to complete their degrees.

3. Restrictions on F-1 International Students
Students on F-1 visas should seek advice from their International Student Advisors before filing for a personal leave of absence. The U.S. Federal Immigration Law and Regulation supersede the foregoing policy if any inconsistency arises. The final approval decision is at the discretion of the ITU International Student Office.

Current degree-seeking ITU students are not eligible to register as Open Campus students.

Open Campus Policy
An Open Campus student is a non-degree seeking student who is enrolled in courses for a particular trimester, but not yet admitted into any degree program. Such a student may enroll in any master’s level (numbered 500-699) course in any discipline at ITU, except for internship, CFL, capstone, independent study or thesis courses. An Open Campus student may not enroll in a doctoral level course without special approval from the relevant Department Chair.

There is a 9 credit hour maximum per trimester. If a student decides to apply to an ITU Master’s program that student may only apply to transfer a maximum of nine (9) credit hours earned under Open Campus towards a degree program. Open Campus students must adhere to any and all university policies and the Student Code of Conduct. Open Campus students are subject to the same tuition and fees, as well as refund schedule, as all other students, with the exception of the health insurance premium. Access to university facilities, services, and resources will be available. However, an Open Campus student cannot hold a leadership role in a student organization at ITU.

Current degree-seeking ITU students are not eligible to register as Open Campus students.

Internship Policy
PURPOSE
Hands-on experience and skill development is a key component of ITU’s pedagogy. We recognize how important internships are in transferring course theory, concepts, and skills from a graduate program to a career in the student’s field of study. For this reason, we are committed to linking the classroom with relevant industry experience. As affirmed by the university’s Academic Leadership Council (ALC), ITU requires students to participate in an internship (one credit hour for part-time or three credit hours for full-time). Although only one (1) credit is required, students can participate up to a maximum of 10 credit hours per degree) as a core part of the curriculum for all of ITU’s master degree programs.

Internships are managed through enrollment in INT 593, a course that may be taken for a maximum of ten credit hours over the course of an academic program. ITU reviews each internship request on an individual basis to ensure that it is consistent with the student’s coursework and academic policies. For ITU students in F-1 international student status, the internship request must also meet the standards found in the U.S. Code of Federal Regulations – 8 CFR § 214.2(f)(10) (i).

ITU’s internship eligibility requirements, academic components and expectations, procedures and due dates, and conditions are presented below.

ELIGIBILITY REQUIREMENTS
The following requirements apply to students who wish to
participate in ITU’s internship program:

- Admission/Enrollment – Students must be admitted to one of ITU’s graduate programs. *F1 students need to enroll in a full course load of a minimum of nine credit hours per trimester. (Note: See exception below).
- INT 593 series enrollment – Students must enroll in INT 593 in order to have an internship. This course may be part of the student’s 9 credit hour full time course load. Internships will not be approved as any other course at ITU, including independent study or special study courses. To continue an existing internship, students must enroll in INT 593 and follow the procedures listed here for each new trimester.
- Tuition/Fees – Students will not be approved for or begin an internship until all past tuition and fees have been paid in full.
- GPA – Students must maintain a minimum cumulative GPA of 3.0 and passing grades in INT 593 as well as passing of CFL 591 to continue participating in internship.
- Internship relevance – Students must show that the requested internship is relevant to their field of study and that the internship provider has extended a formal offer that is consistent with the procedure below.
- Internship providers – Students may not have more than one internship provider at a time. Internships cannot be at the same company of employment.

*All international students need to check with their immigration lawyer for eligibility to take part on internship.

ACADEMIC COMPONENTS AND EXPECTATIONS
All internships at ITU require enrollment in INT 593. Internship. This academic class is taken for one credit hour with part-time internships (up to 20 hours per week) or three credit hours with fulltime internships (21 to 40 hours per week not exceeding 40 hours per week). In order to earn a passing grade, students must directly submit assignments listed below to their faculty member through EMS, and include: clear identification of their name, university ID number, the graduate program, the internship title, the internship provider’s name, and the internship supervisor’s name. Assignments may include:

- Description of internship – A presentation of the unique duties and responsibilities the student will perform during the internship. (Note: The internship cannot be a substitution for a paid staff position or a vacant position at the internship provider’s organization).
- Mid-term internship report – An initial report by the student on his/her performance and progress in the internship, as well as specific information about the skills and knowledge being acquired relevant to the student’s field of study. (Note: Such reports must first be cleared by the internship provider to observe appropriate confidentiality and intellectual property constraints).
- Final internship report – A comprehensive report on topics covered in the mid-term report and supplemented by the student’s evaluation of relevance of the internship to the student’s academic program, career goals, and potential areas for future study and research beyond the internship.
- Final evaluation form – Submitted directly to the faculty member by the internship provider during the last two weeks of the trimester with the signatures of the internship supervisor and an HR representative of the organization providing the internship.

CONDITIONS FOR ALL STUDENTS
To ensure compliance with ITU’s policies, the following conditions apply to all, new and continuing students attending ITU:

- First time internships – Internships for the first time with ITU will be limited to a part-time internship. An exception will be allowed for students who can demonstrate a prior successful internship or training experience related to a degree they earned in the U.S. Evidence of such an experience may include an academic transcript showing a passing grade in an internship course, a report from the institution’s internship program showing satisfactory performance, and/or a letter of recommendation from an employer or other evidence that the student was authorized to work for during a period of Optional Practical Training.
- Integrating Academic & Internship Learning (CFL 591) – Students must enroll in the Integrating Academic & Internship Learning (CFL 591) course before beginning their first internship. However, students who apply and are approved for internship their first trimester may take CFL 591 concurrently during that same first trimester.
- Continuous enrollment/attendance – If the internship provider ends the agreement, the student will not be permitted to continue with the internship. Or if an F1 student drops below full-time enrollment (Note: See exception below) will not be permitted to continue with the internship.
- Start/End dates – As mentioned above, internships are approved only in conjunction with enrollment in INT 593. For this reason, internships cannot begin sooner than the trimester start date and must end by the trimester end date. No part of the internship may take place during break periods between trimesters.
- Grade Point Average (GPA) requirements – Students must maintain a minimum 3.0 cumulative GPA in their program at ITU to remain eligible for an internship. Once official grades have been posted for the prior trimester, any student who holds a cumulative GPA below 3.0 will lose all internship eligibility (i.e., both full-time and part-time), including eligibility for the trimester in progress.
- Students who maintain a cumulative GPA of 3.0 or higher once final grades have been posted and has earned a
Students who have an incomplete grade and wish to apply for an internship must submit all outstanding work by the deadline to apply for internship. The final grade must be posted prior to the start of the internship. GPA requirements will apply.

Students who have an incomplete grade and who do not submit completed outstanding coursework by the end of the subsequent academic term, will not be eligible to apply for internship (part-time or full-time), regardless of their cumulative GPA. (Refer to Incomplete grade policy).

Students whose term GPA for the most recent trimester is 3.0 or higher, but cumulative GPA remains below 3.0, will not be eligible for internship.

Note: coursework taken at another institution will not be considered in determining eligibility for an internship in an ITU program.

Academic performance requirements (INT 593) – A student who receives a grade of “NP” (no pass) in INT 593 will be reduced to part-time internship. If a second grade of “NP” is received in INT 593, the internship will be cancelled and the student will be ineligible for future internships at ITU. If a student is participating in part-time internship and receives a grade of “NP” in INT 593, the student will be ineligible for future internship at ITU.

Academic performance requirements (CFL 591) -- A student must pass CFL 591 by the end of the trimester in which they complete their first internship or that student will lose all internship eligibility for the next term. Internship eligibility will be restored only if a passing grade has been earned in CFL.

Maximum internship credit hours – Students are limited to ten total credit hours for INT 593. For each part-time internship (up to 20 hours per week), one credit of INT 593 will be used. For each full-time internship (21 to 40 hours per week), three credits of INT 593 will be used. This limit applies to both new and continuing students. A change in programs or interruption of studies will not reset this limit.

Change of internship provider – ITU recognizes that unforeseen circumstances may require the change of an internship provider. To allow completion of INT 593, students will be allowed to change their internship provider once per trimester. A second change of internship request submitted in the same trimester will not be allowed. Students should not change internship until the change of provider has been approved by ITU. If student changes provider before approval, internship change will be denied and student will receive a “NP” grade.

A student may not request a change of internship authorization level (i.e. part-time to full-time/full-time to part-time) during the trimester in progress unless the request is the result of an adjustment of eligibility based on GPA and

is submitted completely on or before the add/drop deadline. Students may not change an internship provider after Friday (6:00pm) of the eighth week of the trimester. If an internship ends after the eighth week, the grade in INT 593 will be based on performance up to that point.

ADDITIONAL CONDITIONS FOR STUDENTS ATTENDING ITU ON AN F-1 STUDENT VISA

To ensure compliance with ITU’s policies and federal regulations, the following conditions apply to all students attending ITU in F-1 student status:

- Maintaining visa status – If a student violates his/her status, the student’s I-20 will be terminated, which will also immediately end the student’s internship.
- Eligibility for post-graduate work authorization under Optional Practical Training (OPT) – An F-1 student who receives 12 or more months of full-time CPT is ineligible for post-graduate work authorization under Optional Practical Training (OPT). This includes any full-time CPT a student took at the same degree level at another school before transferring to ITU. However, part-time CPT is not counted towards this total and should not affect the student’s eligibility for post-graduate OPT.
- Annual Vacation – F-1 students are allowed one vacation term, also known as a “annual vacation”, after completing a full academic year of study: three consecutive trimesters of full-time enrollment. If a student wishes to take a vacation term after this point, they may reduce their enrollment to part-time (Under 9 credit hours) or take no classes during that trimester. However, if the student wishes to begin or renew an internship during that trimester, they must enroll in INT 593.
- Last Term of Study – An F-1 student who is completing a degree program in the same trimester that an internship is requested is only required to take the number of classes needed to complete the degree. However, these classes must be on-campus, as required by F-1 student visa regulations. F-1 students can submit a request for reduced course load – last trimester.
- Exception for ITU student employees – Students employed by ITU in a position relevant to their academic program do not require an internship/CPT, as they will gain experience in that role. These students will instead take another academic class to maintain full-time enrollment. However, F-1 students who seek to work on-campus more than the 20-hours per week during the trimester must request a full-time internship, enroll in INT 593 for three credit hours, and obtain CPT authorization as required by their visa status.
- Volunteering, observation, and unpaid work – ITU will not allow an F-1 student to engage in volunteer or unpaid work for an internship provider outside of INT 593. Also, such action by a student before or after approved internship dates may result in an immediate loss of the internship and CPT authorization, as well as eligibility for any future internship at ITU. Such action
might also be treated as a violation of the student’s F-1 visa status, resulting in termination in SEVIS for “unlawful employment”.

Doctoral Program Policy

ADMISSIONS REQUIREMENTS
- Application Requirements: Doctoral applicants must submit their completed application normally 4 months prior to the start of a trimester
- Resume: Four page maximum
- Statement of purpose: A statement of purpose of approximately 1,000 words is required. This statement should address the reasons for seeking the Doctoral degree and how the doctorate will advance personal and career goals. Doctoral programs require a minimum of three years for completion. Maximum time for completion is eight years, during which the candidate works with a faculty supervisor, who is also a member of the panel before which the candidate will defend his or her dissertation.
- Admissions are highly competitive. Applicants are expected to present:
  - A cumulative grade point average (GPA) of 3.5 or higher in a relevant, regionally accredited Master’s program.
  - Official transcripts of all undergraduate and graduate education
  - GRE score: within 5 years prior to application to the program.
  - Three academic or professional letters of recommendation attesting to the ability of the applicant to succeed in a Doctoral program.

PROGRAM REQUIREMENTS:
- 60 credit hours beyond Master’s degree including 30 credit hours of coursework and independent study 30 credit hours of dissertation (All dissertation units are graded on a Pass/No Pass basis).
- A maximum of 15 credit hours with grade of B or above may be transferred from Master’s or Doctoral level courses of a regionally accredited university, with approval of department chair.
- Successful completion of a written qualification examination is required for advancement to candidacy.
- Successful completion of an oral presentation of the Dissertation proposal.
- Successful completion of an oral comprehensive defense of the Doctoral dissertation.
- One or more articles of original work based on the dissertation research should be submitted for publication in an appropriate peer-reviewed journal, approved by the Doctoral Committee (DC).

PROGRAM COMPLETION
Dissertation Advisor
It is the student’s responsibility to obtain consent from a faculty member in the student’s major department to serve as his/ her prospective dissertation advisor as soon as the student is accepted as a Doctoral student. The department chair must approve the advisor and inform the chair of Doctoral Program Council (DPC) and the University Registrar of the approval. A Doctoral student and his/her dissertation advisor jointly develop a study plan for courses and research in a particular area, and submit it to the Department Chair for approval.

QUALIFICATION EXAMINATION
The qualification exam may be taken upon successful completion of 24 credit hours. Exam grading will be on a P/NP basis, unless the specific program institutes an alternate form of grading. The qualification exam can be retaken only once. The qualification exam is in written format only. Students must select three fields, subject to approval of the Department Chair, and each field will cover at least three courses.

ADMISSION TO CANDIDACY
A student who passes the qualification examination is considered advanced to candidacy. A Doctoral candidate should promptly request the dissertation advisor to form a Doctoral Committee. A Doctoral candidate is required to be registered for the dissertation research course each term until completion of the degree. If a candidate fails to maintain continuous enrollment in the dissertation research course he/she must apply for reinstatement to the program.

DOCTORAL COMMITTEE (DC)
Upon the student’s request, the dissertation advisor will form a DC. The DC will consist of a minimum of three and a maximum of five members, including the dissertation advisor and the Department Chair. One member of the committee must be from another department of the University or a qualified expert from outside of the University. The dissertation advisor will serve as the chair of DC. The DC will review the proposed dissertation topic, determine any further changes, and approve the research objective.

COMPREHENSIVE ORAL PRESENTATION
After completion of the preparation of the dissertation topic, a Doctoral candidate shall request an oral presentation of the proposed research. The presentation shall make evident sufficient preparation in depth and breadth for advanced research in the proposed dissertation topic. The presentation should be completed within one year after passing the written qualification examination. The presentation may be repeated only once, in whole or in part, within six months, at the discretion of the dissertation advisor.

DISSERTATION RESEARCH
The period following the comprehensive oral presentation is devoted to research for the dissertation, although such research may begin before the oral presentation is completed. After the DC approves the research topic, the Doctoral candidate shall conduct the dissertation research toward the defined objective.

INSTITUTIONAL REVIEW BOARD (IRB)
In addition, doctoral dissertation involving human subjects,
conducted at educational institutions is required to be in compliance with federal regulations. ITU’s IRB, in accordance with federal regulations, reviews all research involving human subjects for compliance with applicable regulation and other best practices. This includes the DBA research proposals, prior to the data collection stage. Candidates are urged to understand their obligations in relation to their interactions with human subjects and the IRB by reviewing the ITU IRB Handbook.

PUBLICATION
One or more articles of original work based on the dissertation research should be submitted for publication in an appropriate peer-reviewed journal, approved by the DC.

TEACHING REQUIREMENT
The Doctoral Candidate is expected to teach at least one course in order to demonstrate his/her teaching ability. The teaching assignment should be completed prior to the Dissertation Defense.

Dissertation Defense
The dissertation must be made available to all members of the Doctoral Committee one-month prior to the defense. The oral defense shall include a presentation of the dissertation results. The Dissertation Defense is open to the public, but only members of the DC are entitled to vote. A unanimous vote is required for a successful defense.

PROGRAM COMPLETION
At least one month before the degree is to be conferred, the candidate must submit two copies of the final version of the Dissertation to the DC, describing the research in its entirety. The dissertation will not be considered as accepted until approved by the DC and presented for publication in the appropriate academic archival repository. The University reserves the right to evaluate the undertakings and the accomplishments of the degree candidate in total, and award or withhold the degree as a result of its deliberations.

TIME LIMIT FOR COMPLETING DOCTORAL DEGREES
All requirements for the Doctoral degree must be completed within eight years following acceptance into the Doctoral program.

Exceptional Consideration
Any instance not covered by the above policy will be considered as an exception. Exceptions will be presented to the DC by the relevant department chair for review. Only the DC can make decisions regarding exceptions.

TERMINAL MASTER’S DEGREE
Students who are not able to complete the dissertation after completing the required number of credit hours of coursework will receive a Terminal Master’s degree, if 30 credits of PhD have been successfully completed.
Starting a Relationship with the International Student Office

All international students new to ITU must check in with the International Student Office when they arrive in the country or before they start classes. Checking in allows the International Student Office staff to make sure that the student has all of the necessary documents to start the trimester in status. Check-in for new international students normally occurs at new student orientation. Students with unforeseen circumstances, who cannot attend orientation should contact the International Student Office through ITU’s ticket system, explain their situation, and arrange a time to check in during make up orientation sessions.

Students who do not check in with the International Student Office may have their SEVIS record cancelled or terminated if ISO staff cannot confirm that they are attending classes at ITU.

Maintaining F-1 Student Visa Status

Maintaining legal status is an active, on-going process. Students need to contact the International Student Office about personal and academic situations that might affect their status.

To remain in legal F-1 visa status, the student should follow these four steps:

1. Check in with the International Student Office.
2. Keep your passport and immigration documents valid:
   a. I-20 must be valid at all times: Any changes to name, program or degree level must be reported to ISO so that an I-20 can be issued to reflect these changes.
   b. If a student needs additional time to complete his/her program, extensions of the I-20 program end date (on page 1) should be requested 30 days before the program end date listed in the program study section on page 1 of the I-20.
   c. I-94 should show class of Admissions as “F-1” and admit until “D/S” or “Duration of Status”.
   d. Passport must be valid six months into the future at all times.

   Please note: A student otherwise maintaining lawful F-1 status is not at risk if s/he has an expired F-1 visa, as a valid F-1 visa stamp is needed for the sole purpose of entering the U.S. from abroad.
3. Maintain full-time enrollment. 9 credit hours for Master’s students at ITU (unless formally approved by the International Student Office and the Office of the University Registrar).
4. Report an address change by filling out the Change of Address form, within 10 days of moving.

Maintaining Personal Immigration and Student Records

Students should keep copies of all immigration and student-related documents until they no longer have any plans to reside, work, or study in the United States.

Here is a suggested list of documents:

- Current passport
- The admissions letter and any documents showing a change of concentration, major, or program
- Diploma for each completed degree
- Any U.S. visas
- Any I-20 or DS-2019
- The most recent I-94
- Any I-797
- A sealed, official transcript for each school attended
- Receipt(s) showing payment of the I-901 SEVIS fee
- Documents related to any internship courses, such as offer letters, internship cooperative agreements, and internship class assignments
- Records of all U.S. addresses with documents proving address of residence

Course Load Information for International Students

F-1 students must be registered for a full course load (9 credit hours) each trimester. There are two exceptions to this rule: being on an Annual Vacation or Reduced Course Load. Forms for these exceptions can be found here: http://itu.edu/students

Reduced Course Loads: Students may apply to the ISO for a reduced course load for certain academic difficulties, medical issues, or if they need less than a full course load to complete their final trimester. Students who are approved for a Reduced Course Load remain responsible for tuition, fees, and grading policies related to classes that began before the student submitted their request and should contact the Office of the University Registrar on these matters.

Annual Vacation: A student is eligible to submit a Request for Annual Vacation after they have completed three consecutive trimesters with a full course load at ITU.

If F-1 students fail to enroll in a full course load without an approved reduced course load or trimester break, their SEVIS record may be terminated or cancelled.

Online Course Policy for F-1 Students

F-1 students may only take one online course (3 credits hours) toward their minimum number of credit hours for full-time enrollment during the trimester. This policy also applies to students with other nonimmigrant visa status who are in the process of changing their visa to F-1. See Federal Regulation 8 C.F.R. § 214.2(f)(6)(i)(G)
**Student Code of Conduct**
All students are expected to abide by ITU’s Student Code of Conduct, as follows:

 ARTICLE I: TERMINOLOGY

1. The term “University” means ITU University.
2. The term “student” includes all persons taking courses, receiving services from University, and pursuing graduate studies at University.
3. The term “faculty member” means any person hired by or contracted with the University to conduct instructional activities.
4. The term “ITU staff” means any person employed by the University, with the exception of student employees.
5. The term “member of the ITU community” includes students, faculty members or ITU staff, and or any other individual associated with the University. The Chief Student Affairs Administrator or designee shall determine a person’s status in a particular situation.
6. The term “ITU Premises” includes all land, building facilities and other property in the possession of or owned, used, or controlled by the University (including parking lots, adjacent streets and sidewalks).
7. The term “judicial body” means any person or persons authorized by the Chief Student Affairs Administrator or designee to determine whether a student has violated the Student Code of Conduct and to recommend imposition of sanctions.
8. The term “judicial advisor” means an ITU official authorized on a case-by-case basis by the Chief Student Affairs Administrator or designee to impose sanctions upon students found to have violated the Student Code of Conduct. The Chief Student Affairs Administrator or designee may authorize a judicial advisor to serve simultaneously as a judicial advisor, and as the sole member or one of the members of the judicial body. Nothing shall prevent the Chief Student Affairs Administrator or designee from authorizing the same judicial advisor to impose sanctions in all cases.
9. The term “shall” is used in the imperative sense.
10. The term “may” is used in the permissive sense.
11. The “Chief Student Affairs Administrator or designee” is the person designated by the CEO of ITU University to be responsible for administration of the Student Code of Conduct.
12. The term “policy” is defined as the written regulations of the University.
13. The term “organization” means any number of persons who have complied with the formal requirements for University recognition registration.

 ARTICLE II: JUDICIAL AUTHORITY

1. The judicial advisor shall determine the composition of judicial bodies and determine which judicial body shall be authorized to hear each case.
2. The judicial advisor shall develop procedures for administration of the judicial program and for the conduct of hearings, which are not inconsistent with provisions of the Student Code of Conduct.
3. Decisions made by a judicial body and/or judicial advisor shall be final. Pending the normal appeal process. (Unless otherwise is stated).

 ARTICLE III: PROSCRIBED CONDUCT

Jurisdiction of the University
The Code of Conduct applies to student behavior that affects the ITU community, irrespective of where that conduct may occur. Discipline may extend to off-campus activities and locations, when they adversely affect the ITU community and/or pursuit of its objectives.

Conduct – Rules and Regulations
Any student found to have committed the following misconduct may be subject to disciplinary sanctions outlined in Article IV.

1. Acts of dishonesty, including but not limited to the following:
   a. Furnishing false information to any University official, faculty member or office.
   b. Forgery, alteration or misuse of any University document, record or instrument of identification.
   c. Computer piracy, including duplication of computer software, copyright infringement and unauthorized computer entry.

2. Disruption or obstruction of teaching, research, administration, disciplinary proceedings and other University activities, including its public service functions on or off campus, or other authorized non-University activities, when the act occurs on ITU premises.

3. Physical abuse, verbal abuse, threats, intimidation, and harassment including, but not limited to, sexual harassment, coercion and/or other conduct that threatens or endangers the health or safety of any person, either on ITU premises or at any University-sponsored activity.

4. Attempted or actual theft of and/or damage to property of the University or property of a member of the ITU community or other personal or public property.

5. ITU specifically prohibits any organization, chartered or otherwise, officially or in fact, from participating in the activity of “hazing”.

6. Gambling on ITU premises, at University functions or through the use of University equipment.

7. Failure to comply with directions of University officials or
law enforcement officers acting in performance of their duties and/or failure to identify oneself to these persons when requested to do so.

8. Unauthorized possession, duplication or use of keys to any part of ITU premises, or unauthorized entry to or use of ITU premises.

9. Violation of federal, state or local law on ITU premises or at University-sponsored or University-supervised activities, or other violation of federal, state or local law which has an adverse effect on the ITU community.

10. Violation of published University policies, rules or regulations.

11. Use, possession or distribution of narcotic or other controlled substances, except as expressly permitted by law, or being under the influence of such substances.

12. Illegal or unauthorized possession of firearms, explosives, other weapons or dangerous chemicals on ITU premises or at any University-sponsored activity.

13. Participating in a campus demonstration that disrupts normal operation of the University.

14. Conduct that is disorderly, lewd or indecent; breach of peace; or aiding, abetting or procuring another person to breach the peace on ITU premises or at functions sponsored by the University.

15. Theft or other abuse of computer time, including but not limited to:
   a. Unauthorized entry into a file, to use, read or change contents, or for any other purpose.
   b. Unauthorized transfer of a file.
   c. Unauthorized use of another individual’s identification and password.

16. Abuse of the judicial or disciplinary system, including, but not limited to:
   a. Failure to appear before a judicial body or University official.
   b. Falsification, distortion or misrepresentation of information before a judicial body.
   c. Disruption or interference with orderly conduct of a judicial proceeding.
   d. Attempting to influence the impartially of a member of a judicial body prior to, and/or during the course of the judicial proceeding.
   e. Harassment (verbal or physical) and/or intimidation of a member of a judicial body prior to, during and/or after a judicial proceeding.
   f. Failure to comply with sanction(s) imposed under the Student Code of Conduct.

ARTICLE IV: JUDICIAL POLICIES

CHARGES AND HEARINGS
1. Any member of the ITU community may file charges against any student for misconduct. Charges shall be prepared in writing and submitted as soon as possible after the event takes place.

2. The judicial advisor may conduct an investigation to determine if charges have merit and/or if they can be resolved by mutual consent of parties involved on a basis acceptable to the judicial advisor (such as mediation). Such disposition shall be final, and there shall be no subsequent proceedings.

3. All charges shall be presented to the accused students in writing form. Chief Student Affairs Administrator or designee shall decide on how they want to follow up with the case. This could go up to an actual hearing.

4. It is up to the Chief Student Affairs Administrator or designee to decide on everything related to the charges brought up against the accused student.

Sanctions
There shall be two major classifications of sanctions that may be imposed for violations of this procedure: Academic and Administrative. Academic sanctions will be defined as those actions related to the course work and grades which are the province of the instructor. Administrative sanctions are concerned with a student’s status on campus. The imposition of one variety of sanction will not preclude the additional imposition of the other.

1. The sanctions listed below may be imposed upon any student found to have violated the Student Code of Conduct.
   a. Warning—A verbal or written notice to the student that the student is in violation of or has violated University regulations.
   b. Probation—A written reprimand for violation of specific regulations. Probation is for a designated period of time and includes the probability of more severe disciplinary sanctions if the student is found to be violating any University regulation(s) during the probationary period.
   c. Fines—Fines may be imposed, as determined or approved by the university.
   d. Restitution—Compensation for loss, damage or injury. This may take the form of appropriate service and/or monetary or material replacement.
   e. Discretionary Sanctions—Work assignments, service to the University or other related discretionary assignments.
   f. Suspension—Separation of the student from the University for a definite period of time, after which the student is eligible to return. Conditions for readmission may be specified.
   g. Expulsion—Permanent separation of the student from the University.

2. More than one sanction listed above may be imposed for
3. Other than University suspension and University Expulsion, disciplinary sanctions shall not be made part of the student’s permanent academic record, but shall become part of the student’s disciplinary record.

ACADEMIC SANCTIONS
Faculty members are responsible for determining the type of academic sanction and reporting the incident. Usually a form of “grade modification” will be employed. Before sanctions can be employed, the faculty member must have verified the instances of academic dishonesty by personal observation and/or documentation. In all cases the violation should be reported to The Chief Student Affairs Administrator.
Sanctions that may be imposed by the faculty member include but are not limited to those listed below.

A student may be:
1. Reprimanded orally.
2. Lowered grade on assignment, exam, paper, or project involved.
3. Failed in the evaluation instrument (assignment, exam, paper, or project).
4. Reduced in course grade, including possible failure of the course. NOTE: A grade of “F” earned in the course as a result of sanctions for academic dishonesty is final and shall be placed on the transcript.
5. Referred for administrative sanctions. A faculty member may choose to refer a student to The Chief Student Affairs Administrator for disciplinary action in addition to the academic action the faculty member has taken or in lieu of any academic sanction.
6. If the incident happened around final time, then the result is an immediate ‘F” in the course followed by other Administrative Sanctions, including NP in other courses taken in the same Trimester, up to expulsion.

ADMINISTRATIVE SANCTIONS
Cheating or plagiarism in connection with an academic program at a campus may warrant expulsion, suspension, probation, or a lesser sanction. Administrative action involving academic dishonesty at ITU is the responsibility of the Chief Student Affairs Administrator according to the Standards of Student Code of Conduct.
The Chief Student Affairs Administrator will respond to:
1. Referrals from the faculty;
2. Flagrant violations of academic standards; and
3. Repeat violations as brought to attention by the faculty or through the centralized reports filed with the Chief Student Affairs Administrator. Repeat violators of the academic dishonesty procedure will face the following sanctions:
   a. Students found to have violated the academic dishonesty procedure in two separate incidents may be placed on academic probation, and potentially suspended or expelled from the University;
   b. The University will initiate expulsion proceedings for students found to have violated the academic dishonesty procedure in three or more separate incidents. Faculty members will be notified by the Chief Student Affairs Administrator when action has been taken.

Interim Suspension
In certain circumstance, the Chief Student Affairs Administrator, or a designee, may impose an immediate University suspension.

1. Interim suspension may be imposed:
   a. To ensure the safety and well-being of member of the ITU community or preservation of University property;
   b. To ensure the student’s own physical or emotional safety and well-being; or
   c. To ensure safety of others if the student poses a definite threat of disruption of or interference with the normal operation of the university, all at the discretion of the Chief Student Affairs Advisor or designee.

2. During the interim suspension, student shall be denied access to ITU premises and/or all other University activities or privileges for which the student might otherwise be eligible, as the Chief Student Affairs Administrator or designee may determine to be appropriate.

APPEALS
The accused student may appeal a sanction imposed. The request must be in writing and submitted within the timeframe outlined in the sanction notice. The Chief Student Affairs Administrator or designee may decide to uphold an appeal. Based on the nature of the case, s/he may decide to deny the appeal process.

Academic Grievance Procedures
Generally, a grievance is a way for students to raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. This can include claims based on actions, policies, or behaviors that are believed to be unauthorized or unjustified or that adversely affect the status, rights, or privileges of a student. A Non-Academic Grievance is more specifically one that is fundamentally separate and apart from issues specific to a student’s research, studies, coursework, testing, results or product. A Non-Academic Grievance can include actions or omissions alleged to be based on race, color, religion, gender, gender identity, sexual orientation, national or ethnic origin, age or disability, or any other characteristic protected by applicable state and/or federal law.

Time Guidelines
The timeframes set forth herein are guidelines. They may be extended by the Director or President, as applicable, in his or her discretion for good cause.

Advisers
A student initiating or participating in a grievance under this procedure may be accompanied by an adviser in any discussion with the Director, the President or their designees, or a grievance or grievance appeal officer under this procedure; any advisor must be a current ITU faculty, staff member or student.

**No Retaliation Policy**
ITU prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.

**Student Non-Academic Grievance Policy**
The purpose of this Student Non-Academic Grievance Policy and Procedure is to set forth the process for students to seek a resolution of an issue, complaint, dispute or conflict (“Issue”) that is not related or only tangentially related to their academic work (“Non-Academic Issue”). As an example, a Non-Academic Issue is one that might arise in a student’s capacity as a student-employee.

Any student who has a Non-Academic Issue and wishes to pursue a Non-Academic Grievance should be able to demonstrate they have first made a reasonable effort to resolve the matter on an informal basis before initiating a formal grievance process or, in rare instances, demonstrate that it is effectively impossible to try to make such an effort.

A Non-Academic Grievance shall be submitted in a written Initial Report to the Office of Student Services (“OSS”). The student should set forth in writing the substance of the complaint, the grounds for it, the evidence on which it is based, and the efforts taken to date to resolve the matter. Upon receipt, OSS shall appoint an administrative staff member to assist the student in the grievance process. The assigned administrator will begin by confirming that reasonable efforts have been made to seek resolution, including the administrator facilitating informal efforts to resolve the issue between relevant parties. A demonstrated lack of good faith effort by any party attempting to resolve complaints informally, may be considered with all other factors to reach an ultimate decision on the merits of any grievance.

In the event these or prior informal efforts fail to address the issue, the student may request that the process move to a grievance hearing. Except where contravened by law, the request for a grievance hearing must occur within 45 days of the Initial Report. It must be made in writing to either: (a) the assigned administrator, or (b) the OSS, or (c) through the online ticketing system. Once a written request to escalate to a formal grievance hearing has been received, the ITU Grievance Committee will be asked to review the Non-Academic Issue. This committee will consist of representatives from Academic Advising, Faculty, Student Services, the Office of the University Registrar, and the Office of the Provost, along with the assigned administrator on the Issue. If the Issue involves an international student, a representative from the International Student Office ISO will also be included on the committee.

The Grievance Committee may request further written or oral submissions from any relevant party, may review materials as it deems appropriate, and shall thereafter deliberate and vote upon a decision regarding the Non-Academic Issue and, absent extraordinary circumstances, create a written statement of decision.

In the event any involved party finds the committee’s decision unsatisfactory, they may appeal the decision to the President of the University. The request for an appeal should be filed in writing via the online ticketing system within 5 business days of the issuance of the committee decision. An unreasonable delay in filing the appeal may be grounds for rejection of that appeal.

Upon receiving the request for appeal, the Grievance Committee shall provide the President’s Office with all documents, submissions, statements, materials along with its written statement of decision. The President shall begin consideration of the materials and may, in his/her discretion, request further information as may be appropriate. The President will then consider the matter and then accept, reject and/or propose amendment to the Committee’s decision. That decision and the reasons therefor (the “President’s Report”) shall be tendered, in writing to the Committee within 15 business days, absent extraordinary circumstances. The Grievance Committee shall, within five business days of receiving the President’s Report fully reconsider its assessment ab initio and then re-submit an amended decision, in writing, to the President who shall review the amended decision, and then make a final and conclusive ruling in writing. ITU students and stakeholders may also submit a complaint to the Bureau of Private Postsecondary Education (BPPE).

If, but only if, the President is a material party to the Non-Academic Issue, and if a party seeks an appeal of the decision of the Grievance Committee, the appeal will be directed instead to the Executive Committee of the Board of Trustees, who may designate an appropriate person to execute the responsibilities of the President in adjudicating the appeal of the Non-Academic Issue, as set forth above.

**Academic Integrity**
ITU is dedicated to learning and research, and hence is committed to truth and accuracy. Integrity and intellectual honesty in scholarship and scientific investigation are, therefore, of paramount importance. These standards require intellectual honesty in conducting research, writing of research results and relations with colleagues. Academic misconduct includes cheating, plagiarism, falsification of data, etc.

**Academic Dishonesty Policy**
ITU is committed to creating an environment where student achievement is championed and celebrated. Because the university values academic integrity as an essential
component of academic excellence, students are expected to be truthful and ethical in their academic work. Commitment to academic integrity is the responsibility of every student and faculty member at ITU.

Faculty and students come from a variety of backgrounds and cultures, giving rise to different understandings of moral and ethical behavior. Faculty should clearly state well-defined standards to reduce uncertainty and clarify expectations. Academic dishonesty is defined as: an act of deception in which a student claims credit for the work or effort of another person or uses unauthorized materials or fabricated information in any academic work. Academic dishonesty is a violation of the ITU ‘Student Code of Conduct’ and will not be tolerated and might lead to suspension and expulsion.

Acts of academic dishonesty include, but are not limited to, the following:

- Cheating (unauthorized copying or collaboration on a test or assignment, or the use or attempted use of unauthorized materials);
- Tampering (altering or interfering with evaluation instruments and documents);
- Fabrication (falsifying experimental data or results, inventing research or laboratory data or results for work not done, or falsely claiming sources not used; fabricating or falsifying documentation to try to change a course grade);
- Plagiarism (representing someone else’s words, ideas, artistry, or data as one’s own, including copying another person’s work, including published and unpublished material, and material from the Internet, without appropriate referencing, presenting someone’s else’s opinions and theories as one’s own, or working jointly on a project, then submitting it as one’s own);
- Or assisting (assisting another student in an act of academic dishonesty, such as taking a test or doing an assignment for someone else, changing someone’s grades or academic records, or inappropriately disturbing exams to other students).

Campus Alcohol Policy
Since the consumption of alcoholic beverages is prohibited, alcoholic beverages may be consumed on University premises only during an event being sponsored or hosted by a campus individual, university-recognized group, department, or office that get approval by the University President or the Provost office. The event must operate within state and local laws as provided by the Department of Alcohol and Beverage Control (ABC).

It is the policy of ITU to maintain a drug-free workplace and campus. The workplace and campus are presumed to include all ITU premises where the activities of the University are conducted. The unlawful manufacture, distribution, dispensation, possession and/or use of controlled substances, or the unlawful possession, use, or distribution of alcohol is prohibited on the ITU campus, in the workplace, or as part of any of the University’s activities.

For approval of the detailed protocol on serving alcohol on campus, all of the following conditions shall prevail:

- The chair of the event and other officers or representatives of the event sponsor (21 years of age or older) who will be present throughout the event, who will refrain from consuming alcoholic beverages
- The monitoring and serving of alcohol shall be under the direct supervision of the chair of the event and other representatives of the event.
- It is the responsibility of the department to ensure that no alcohol is distributed to persons under the age of 21. Alcohol will only be served to individuals who are 21 or older with a valid, government issued photo identification.
- If there will be attendees at the event who are under the age of 21 years, the event sponsor must have a plan in place to ensure that these guests will not be served alcohol. (e.g., ID cards must be shown upon entering the venue and wristbands must be distributed.)
- Self-service of alcohol is not allowed in any location on the campus.
- Anyone who looks to be under the influence of alcohol and unable to exercise care for one’s own safety or that of others should not be served alcohol and the Department of Facilities Development & Operations may be notified if there are further questions or concerns.
- Event sponsor should note that they may also be held responsible for serving alcohol to persons who drive while intoxicated.
- Event sponsor are encouraged to reduce the consumption of alcohol at least 1 hour prior to the scheduled ending time of the event.
- No open containers of alcohol may be present on campus at any time. All alcohol must be served, opened, and disposed of by staff members who are over 21 years
of age.
- Event sponsor must properly secure all leftover beverages
- Alcoholic beverages shall only be consumed in the approved designated area.
- Alcohol is not permitted to be served unless suitable Equally Attractive Non-Alcoholic Beverages (EANAB’s) and food shall be made available at all functions when alcoholic beverages are served.

If immediate assistance is needed or an emergency occurs, inform Security and call 911. In order to obtain approval to serve alcoholic beverages on campus, please contact the Department of Facilities Development & Operations at operations@itu.edu to retrieve the proper form and listing of procedures.

University Lost & Found Policy
ITU’s Lost & Found box is located in the Security Office. Any unattended, abandoned, misplaced, or forgotten items, including, but not limited to, equipment, cash, jewelry, phones, books, keys, documents, or personal identification papers (driver’s license, credit cards, etc.), which are found within the boundaries of ITU will be turned in to the Security Office.
All found items will be recorded in the Lost & Found log and held for thirty (30) days. If the owner of the item(s) can be identified, ITU staff will attempt to contact the owner by phone or email, unclaimed items will be disposed of after thirty (30) days.

EXCEPTIONS TO THE POLICY:
- High value items will also be recorded in the Lost & Found log but will, instead, be stored in the Department of Facilities Development & Operations.
  - When a high value item is being claimed, Security will contact the Department of Facilities Development & Operations.
  - An FD&O staff member must verify an item’s ownership prior to its release.
  - High value items include, but are not limited to, driver’s licenses, state/federal identification cards, ATM/debit/credit cards, checks, checkbooks, wallets, bicycles, cell phones, and certain electronic items such as laptops, iPods, and mp3 players.
- Food and food/beverage containers turned into the Lost & Found will be disposed of at the end of the day on which it was found.
- Any item deemed unsanitary will be disposed of immediately.

In order to claim an item from the Lost & Found, individuals must present photo identification and provide a physical description of the item. That person must also sign the Lost & Found log once ownership has been established.

Any questions regarding Lost and Found items should be directed to the Security Office at (669) 214-1495 or security@itu.edu.

Parking Policy
International Technological University (ITU) has a limited, private parking lot where staff and students can park for free, on a “first-come, first-served” basis. ITU is not responsible for any damages that may occur to a personal vehicle while parked at the 2711 North First Street campus. Parking in facilities adjacent to the campus is prohibited and subject to towing and impound charges.

All vehicles are parked on campus at the owner’s risk. ITU does not assume any liability for loss including, but not limited to, theft or damage to any vehicle or its contents while parked at the University.

Parking spaces are not to be used for distribution, solicitation, benefit sales, or other similar activities by anyone of ITU. All vehicles shall be parked within the boundaries of a single parking spot, between parking lines. Major vehicle repairs are not allowed on ITU property. Vehicles are prohibited on or parking on sidewalks, lawns, or other areas not designated for driving or parking. Exceptions may be made for maintenance, contractors, and emergency response vehicles. A shortage of parking space does not excuse parking violations; vehicles found to be in violation may be towed at the owner’s expense.

Student Parking
ITU does not require parking passes for students. However, due to limited parking spaces, students are encouraged to take public transportation, utilizing their Valley Transit Authority Commuter Pass. The University does not allow for overnight student parking.

Disability Parking
The parking facilities has designated space for drivers with a valid state issued placard, license plate, or other form of identification recognized by state or national authority. Placards must be displayed and visible from outside of car. Important: Your parking placard or plate may only be used by you. Never loan your placard to another, or alter a placard or placard identification card.

Towing Services
ITU uses Campbell Towing at 1461 Terminal Ave San Jose, CA 95112. Phone: (408) 295-7490 Office Hours: Monday to Friday, 8:00 AM to 5:00 PM.

Enforcement
Vehicles found to be in violation may be towed at the owner’s expense.
Diversity Policy
ITU firmly believes that personal diversity in all its aspects is essential to our ability to accomplish our mission. Diversity embodies all those differences that make us unique individuals and includes people of different race, ethnicity, culture, sexual orientation, gender, religion, age, personal style, physical ability as well as people of diverse opinions, perspectives, lifestyles, ideas and thinking. We value the differences in views and perspectives and the varied experiences that are part of a diverse organization. Diversity enriches and broadens our university, which in turn leads to more creative and meaningful programs.

For the same reasons, ITU values professional diversity. Academic professionals and faculty, administrators, and students, from all disciplines, from both the public and private sectors, from all economic strata, and from the least experienced to the most seasoned are vital to maximizing our experience. Only by drawing and retaining a diverse employee and contractor base will we guarantee success of our university as well as our respective professional pursuits. Therefore, ITU is committed to creating and maintaining a culture that promotes and supports diversity throughout our organization.

Nondiscrimination Policy
ITU is committed to the most fundamental principles of academic freedom, equality of opportunity, and human dignity. This requires that decisions involving students and employees be based on individual merit and free from invidious discrimination of all forms, whether or not legally prohibited.

ITU’s policy is to fully comply with applicable federal and state nondiscrimination and equal opportunity laws, orders and regulations. ITU will not discriminate in programs and activities against any person because of race, color, religion, sex, national origin, ancestry, age, marital status, handicap, unfavorable discharge from the military, or status as disabled veteran or veteran of Vietnam era. This nondiscrimination policy applies to admission, employment, access to and treatment in University programs and activities.

Complaints of invidious discrimination prohibited by university policy shall be resolved exclusively within existing ITU procedures.

Sexual Harassment Policy
Sexual harassment is legally defined to include any unwanted sexual gesture, physical contact, or statement that is offensive, humiliating, or interfering with required tasks or career opportunities at ITU. Sexual harassment is prohibited under federal and state discrimination laws and the regulations of the Equal Employment Opportunity Commission.

ITU will not tolerate sexual harassment of students or employees and will take action to provide remedies when such harassment is discovered. The University environment must be free of sexual harassment in work and study.

Appropriate sanctions will be imposed on offenders in a case-by-case manner to ensure ITU is free of sexual harassment. ITU will respond to every reported sexual harassment complaint.

Whistleblower Policy
1. Summary of Policy
   a. This policy governs the reporting and investigation of allegations of suspected illegal or improper activities concerning the financial assets of the University, and the protection of whistleblowers from retaliation. It describes the procedures for investigating known or suspected illegal or improper activities and addressing complaints of retaliation for raising such issues.

2. Policy
   a. ITU has a responsibility for the stewardship of University resources and the private support that enables it to achieve its mission. The University’s internal controls and operating procedures are intended to detect and to prevent illegal or improper activities relative to its financial assets. However, intentional and unintentional violations of laws, regulations, policies and procedures may occur and may constitute illegal or improper activities. The University has a responsibility to investigate and report to appropriate parties allegations of suspected illegal or improper activities, and to protect those employees who, in good faith, report these activities to the appropriate authority.

3. An ITU employee may not:
   a. Retaliate against an employee who has made a protected disclosure or who has refused to obey an illegal or improper order, nor
   b. Directly or indirectly use or attempt to use the official authority or influence of his or her position for the purpose of interfering with the right of an employee to make a protected disclosure to the University.
   c. It is the intention of the University to take whatever action may be needed to prevent and correct activities that violate this policy.

4. Procedure
   a. Filing a Report of Suspected Illegal or Improper Activities Relative to Financial Assets
      i. Any person may report allegations of suspected illegal or improper activities. Knowledge or suspicion of illegal or improper activities may originate from academic personnel, staff or administrators carrying out their assigned duties, internal or external auditors, law enforcement, regulatory agencies, and customers, vendors, students or other third parties.
      ii. Allegations of suspected illegal or improper activities should be made in writing so as to assure a clear understanding of the issues raised. Such reports should be factual and
contain as much specific information as possible.

iii. Normally, a report by an ITU employee of allegations of a possible illegal or improper activity should be made to the reporting employee’s immediate supervisor or other appropriate administrator or supervisor within the department. However, when the whistleblower believes there is a potential conflict of interest, such reports may be made to another University official who has responsibility over the department in question or the authority to review the alleged illegal or improper activity on behalf of the University. Should the alleged illegal or improper activities involve the President, Executive Vice President, or another Vice President, such reports may be made to the Chair of the Audit Committee of the Board of Trustees (c/o Board of Trustees, International Technological University).

iv. When a person reports allegations of suspected illegal or improper activities to an appropriate authority, the report is known as a protected disclosure. University employees and applicants for employment who make a protected disclosure are protected from retaliation.

v. The Audit Committee may enlist outside legal, accounting or other advisors, as appropriate, to conduct any investigation of complaints regarding financial statement disclosures, disclosure concerns or violations, accounting, internal accounting controls, auditing matters or violations of the University’s policies.

b. How to report improper acts

i. If any employees have information regarding possible violations of state or federal statutes, rules, or regulations, or violations of fiduciary responsibility, call:

ii. 816-2406

iii. Human Resources office – (408) 816-2409

iv. California State Attorney General’s Whistleblower Hotline – (800) 952-5225. The Attorney General will refer your call to the appropriate government authority for review and possible investigation.

v. Report can be submitted through the suggestion box in the front desk area or an anonymous email from ITU website.

c. Protection from Retaliation

i. Any employee who believes he or she has been subjected to or affected by a retaliatory conduct for

5. Reporting suspected illegal or improper activity, or
6. For refusing to engage in activity that would result in a violation of law, should report such conduct to the appropriate supervisory personnel (if such supervisory personnel is not the source of or otherwise involved in the retaliatory conduct). Any supervisory employee who receives such a report, or who otherwise is aware of retaliatory conduct, is required to advise the Human Resources Manager of any such report or knowledge of retaliatory conduct. If the employee believes that reporting such conduct to the appropriate supervisor is for any reason inappropriate, unacceptable or will be ineffectual, or if the report to the supervisor has been made and the retaliatory conduct has not ended, the employee should report the incident directly to an Executive Vice President, the President, or the Chair of the Audit Committee of the Board of Trustees. The University will use its best efforts to protect whistleblowers against any form of retaliation.

It cannot guarantee confidentiality, however, and there is no such thing as “unofficial” or “off the record” reporting. The University will keep the whistleblower’s identity confidential, unless

1. The person agrees to be identified;
2. Identification is necessary to allow the University or law enforcement officials to investigate or respond effectively to the report;
3. Identification is required by law; or
4. The person accused of illegal or improper activities is entitled to the information as a matter of legal right in disciplinary proceedings.
Staying Connected with ITU
The ITU Alumni Association allows alumni to actively participate in the ITU community, stay in touch with classmates and faculty, and remain involved in ITU developments. The alumni association provides career, volunteer, and networking opportunities and keeps alumni updated on the progress and needs at ITU. This association offers many exciting events and helpful services, and all alumni are encouraged to join. To learn more about the ITU alumni association, please visit http://www.itu.edu/alumni, and join the mailing list.

UNIVERSITY OFFICERS

• Dr. Gregory O’Brien,
  President of the University

• Dr. Eric Tao
  University Provost

• Dr. Bhagat Patlolla,
  Associate Provost & ALO

• Mr. Edward Lam,
  Chief Financial Officer

• Mrs. Angie Lo Fung,
  Board Liaison

BOARD OF TRUSTEES

• Dr. Alvin Cheung,
  Chairperson of the Board of Trustees

• Dr. Chi-Chia Hsieh,
  Immediate Past Chairperson of the Board of Trustees

• Dr. Bhaskar Kura,
  Vice Chair of the Board of Trustees

• Mr. Ivan Chan,
  Treasurer of the Board of Trustees

• Dr. Thomas Gold,
  Secretary of the Board of Trustees

• Dr. Thomas Hannen,
  Member of the Board of Trustees

• Dr. Betty Sundberg,
  Member of the Board of Trustees

• Mr. Yao Lin,
  Member of the Board of Trustees

• Dr. Gregory O’Brien,
  Ex Officio Member and President of ITU
Departments and programs are listed alphabetically. Curriculum and courses are listed under each program.

For the most current course offerings by trimester, see the online Course Schedule.

PREREQUISITES
Prerequisites for courses should be noted carefully; meeting these requirements is the responsibility of the student.

Course Numbering System
Each course is assigned an alphabetical code along with a three-digit number. The course code is defined by a descriptor for course types or programs:

- ACT (Accounting)
- AMS (Applied Mathematics)
- BIO (Bio-Management)
- BUS (Business, Non-specific)
- CEN (Computer Engineering)
- CFL (Classroom Field Learning)
- CSC (Computer Science)
- DGA (Digital Arts)
- ECE (Electrical and Computer Engineering)
- EEN (Electrical Engineering)
- EMG (Engineering Management)
- ERP (Enterprise Resource Planning)
- FIN (Finance)
- HCM (Health Care Management)
- HRM (Human Resource Management)
- ICS (Information Cyber Security)
- IDS (Interdisciplinary Sciences)
- INB (International Business)
- INT (Internship)
- MBN (Master of Business Administration, Thesis)
- MGT (Management)
- MIS (Information System Management)
- MKT (Marketing)
- SWE (Software Engineering)
MISSION
In order to become a center of distinction, the Department of Business Administration strives to prepare its students and graduates with the knowledge and practical skills to serve as business and industrial leaders. We believe this aspiration is achieved through collaboration with our high quality faculty and ongoing engagement with our communities.

INSTITUTIONAL LEARNING OUTCOMES (ILOs)
1. Problem Solving: Construct, interpret, analyze, and evaluate information and ideas derived from a multitude of sources in order to reach reasoned solutions or alternative strategies to solve problems.
2. Critical Thinking: Analyze facts and information from multiple sources in order to assess the relevance and synthesize that information in order to formulate meaningful arguments and conclusions.
3. Communication: Interact clearly and effectively in written and oral forms with personal and professional constituencies.
4. Team Work: Operate collaboratively and respectfully as members and leaders of diverse teams and organizations.
5. Technical Literacy: Work responsibly, appropriately and effectively, using technology tools to access, manage, integrate, evaluate, create and communicate information and innovation.
6. Research: Identify and implement systematic methodologies for discovering, understanding, analyzing and interpreting materials, information and behaviors.
7. Responsibility: Practice sound, ethical, and social responsibility in professional and personal endeavors and decision-making.

MASTER OF BUSINESS ADMINISTRATION PROGRAM
The Business Administration program is designed as a balanced preparation for managerial careers in business. The program provides the students a solid foundation in the following concentrations MBA, Business Analytics, and Healthcare Management that will be as valuable ten years from now as it is today. The University’s location in the heart of Silicon Valley provides its MBA students with exposure to the unique entrepreneurial success in this region. The MBA faculty has many years of experience in starting companies, managing corporations, directing advanced product development, and consulting for major companies. The Business program requires successful completion of 36 credit hours.

Inbound and Outbound Exams: Beginning Spring 2016, all new students are required to take the Inbound exam with Peregrine Academic Services. The Inbound exam is required to be taken in the first trimester attending ITU. The exam is considered a mandatory assignment in the core overview course MGT 503 Organizational Leadership Theories. For this reason, all new students are required to take MGT 503 in their first trimester. Students admitted prior to Spring 2016 are encouraged to take the exam when they enroll in MGT 503.

In addition, all new students are required to take the Outbound exam with Peregrine Academic Services. The Outbound exam will be taken in the capstone course, either MGT 690, Pitching a Business Plan to Venture Capitalists, MBN 697, Master Thesis, BUA 690 Simulation and Optimization for Business Analytics, or HCM 690 Healthcare Innovation Management Project. The Outbound exam is also a mandatory assignment in the capstone course. Students admitted prior to Spring 2016 are encouraged to take the exam when they enroll in the capstone course. The benefit of taking the Inbound exam is to test students’ knowledge of business topics when they enter the Business program, while the benefit of taking the Outbound exam is to test their knowledge upon graduation. Students may include the progress made from the Inbound to the Outbound on their resume or portfolio.

Exams will be taken once and the exam score will not affect the GPA or Graduation qualification. The exam score does not affect credit earned for the course. Any student who does not take the Inbound exam will be assigned a grade of Incomplete and subject to the ITU Incomplete grade policy. Any student who does not take the Outbound exam, will not be eligible for graduation. The Inbound and Outbound exams are REQUIRED and are not OPTIONAL. Information on how to take the exams will be provided in the course syllabus related to the Inbound or Outbound exam. Both Inbound and Outbound exams will have a fee which is currently $34 per exam.

This assessment fee will increase from $34.00 to $40.00, effective July 1, 2019.

PROGRAM LEARNING OUTCOMES (PLOs)
All PLOs are mapped to the relevant ILOs and contained within parentheses. Upon completion of this program, graduates will:

PLO 1: Evaluate information to find solutions for business challenges using the cognitive processes of observation, reflection, analysis, conclusion and practice. [Mapped to ILO 1, 2]
PLO 2: Illustrate effective communication in written and oral formats. [Mapped to ILO 3]
PLO 3: Assemble teams for business projects using effective group dynamics. [Mapped to ILO 4]
PLO 4: Evaluate and synthesize business practice by applying technical and research skills to analyze complex data,
understand theories, and create hypotheses. [Mapped to ILO 5, 6]

PLO 5: Outline and demonstrate sound ethical and socially responsible behavior. [Mapped to ILO 7]

CAREER OPPORTUNITIES

PROGRAM REQUIREMENTS
Required Courses:
- 4 Core Courses: 12 credit hours
- 1 Capstone course: Project or Thesis: 3 credit hours
- 1 Internship: 1 credit hour

Elective courses: 20 credit hours
Elective courses may include one or more of the following (a, b, c):
- (a) Internship: 1-9 credit hours
- (b) Cross Disciplinary course: Up to 3 credit hours
- (c) Transfer Credits: Up to 9 credit hours from a regionally accredited university

36 Total credit hours

GRADE POINT AVERAGE (GPA)
A minimum 3.0 cumulative GPA is required for granting of the Master’s degree.

MASTER OF BUSINESS ADMINISTRATION CONCENTRATIONS
- Business Analytics
- Healthcare Management

From the Summer 2019 trimester, the Business Department will add 4 more concentrations:
- Enterprise Resource Planning
- Financial Analysis and Risk Management
- Management Information Systems
- Project Management

Students who will not pursue a concentration in any of the above will graduate with an MBA. In addition, they can focus on Accounting, Human Resource Management, International Business, Management, or Marketing, by completing at least 4 courses in the specific focus. The thesis topic should be on the selected focus.

Students who complete 4 courses from the following: BUA 501, 506, BUS 516, 520, 521, and MGT 569 will graduate with a Business Analysis focus.

MASTER OF BUSINESS ADMINISTRATION (MBA)
The MBA provides the students a solid foundation in various business subjects. With the MBA, you can see your future as a leader and innovator at your workplace. An MBA can offer your profession the enhancement that it needs. It gives students the flexibility to modify their study according to their educational and professional interests.

Emphasis Learning Outcomes with new competencies model

1. Define key Learning Competencies of students that graduate from the Business Degrees at ITU
   a. Competency is: a defining capability or advantage that distinguishes a business student from other degree students (internal and external) (Oxford Dictionaries)
   b. As defined byWSCUC, the five (5) core competencies that a student needs to develop in order to be successful at school, at work and in their lives are: Writing, Oral Communication, Quantitative Reasoning, Critical Thinking, and Information Literacy (WSCUC, 2016. Retrieved from https://www.wscuc.org/content/big-five-addressing-core-competencies
   c. According to Remake Learning, the goal of competency-based learning is to ensure that students are able to demonstrate knowledge, skills, and dispositions that are important to success in school, higher education, careers, and life (Remake Learning. Retrieved from http://remakelearning.org/competencies/)

2. Learning Competencies defined by the Business Department at ITU are:
   a. LC 1: Communication (spoken, and written)
   b. LC 2: Leadership (includes individual strengths, collaboration and teamwork)
   c. LC 3: Critical Thinking
   d. LC 4: Focused Knowledge

MBA EMPHASIS LEARNING OUTCOMES (ELOs)
The ELOs are intended to improve student learning in the following areas: analytical skills, communication, critical thinking, ethical reasoning, global position, information technology, and the legal systems. Upon completion of the MBA, graduates will:
ELO 1: Evaluate and apply theories for effective business practice. [Mapped to PLOs 1, 4, 5]
ELO 2: Identify and build skills to work and communicate successfully with varied groups that motivate joint ownership of results. [Mapped to PLOs 2, 3, 4]
ELO 3: Select, analyze, and synthesize appropriate data for problem solving and decision-making to disseminate information to key stakeholders. [Mapped to PLOs 1, 2, 3, 4]
ELO 4: Interpret and predict global business trends in response to changing business environments and enhance organizational performance. [Mapped to PLOs 1, 2, 4, 5]
ELO 5: Illustrate skills from numerous disciplines to transform business practice using entrepreneurial and innovative perspectives. [Mapped to PLOs 1, 2, 3, 4, 5]

TRANSFER COURSES
If students pass four parts of the CPA exam, they are eligible to apply for a transfer of 3 courses, equivalent to 9 credit hours. If students pass three parts of the CPA exam, they are eligible to apply for a transfer of 2 courses, equivalent to 6 credit hours. If students pass two parts of the CPA exam, they are eligible to apply for a transfer of 1 course, equivalent to 3 credit hours. If students pass one part of the CPA exam, they will not be eligible to apply for transfer of any course.

SAP Joint Recognition Award
Upon completing 3 of the following Enterprise Resource Planning courses with a grade of B or above, the student is awarded a joint recognition award from ITU and SAP University Alliances.

ACT 603 Accounting Information Systems/ERP - ITU/SAP University Alliances
MASTER OF BUSINESS ADMINISTRATION PROGRAM REQUIREMENTS

4 Core courses for a total of 12 credit hours

REQUIRED CORE COURSES
MGT 503 Organizational Leadership theories

---

**BUSINESS ANALYTICS OFFERS FIVE AREAS OF SKILL:**

**Technical:** The technical courses offer the Business Analytics Professionals the education, proficiencies and capabilities to know what technology can do.

**Organizational / Process:** The Business Analytics Professionals will be given a chance to build up understanding and proficiencies in the fields of organizational change management, business process analysis, business process improvement, and enterprise strategy and planning.

**Practical Reasoning:** Courses in this area will develop the Business Analytics Professionals capability to efficiently conceptualize, apply, study, create, and assess the collected information.

**Administration / Management / Leadership:** The courses in these areas will discuss the understanding, proficiencies, and capabilities necessary to manage work and to encourage and support individuals and teams to complete project tasks and objectives.

**Communication:** Communication is important for the Business Analytics Professionals. The courses will consist of written and verbal practical communication, active listening and understanding, customer service, and teamwork.

The Business Analytics will prepare the students to take the
following certificates: Certification of Competency in Business Analysis (CCBA), and Certified Business Analysis Professional (CBAP).

**EMPHASIS LEARNING OUTCOMES (ELOs):**
*The Business Analytics aims to help students to graduate with the ability to:*

ELO 1: Identify and build skills to work and communicate successfully with varied groups that motivate joint ownership of results. [Mapped to PLOs 2, 3, 4]

ELO 2: Design systems to mechanize data collection and data mining that can deeply influence business performance. [Mapped to PLOs 1, 4, 5]

ELO 3: Determine appropriate data analytics methodologies to support critical thinking for decision making. [Mapped to PLOs 1, 4, 5]

ELO 4: Identify situations to apply Decision Sciences practices for optimal business outcomes. [Mapped to PLOs 1, 4, 5]

ELO 5: Illustrate skills from numerous disciplines to transform business practice using entrepreneurial and innovative perspectives. [Mapped to PLOs 1, 2, 3, 4, 5]

### BUSINESS ANALYTICS REQUIREMENTS

4 Core course for a total of 12 credit hours

### REQUIRED CORE COURSES

MGT 503 Organizational Leadership theories  
FIN 534 Financial and Economic Analysis  
MKT 551 Competitive Marketing Strategies

### CAPSTONE COURSE

1 course for a total of 3 credit hours

- MIS 527 Technology and Operations Management: Creating value  
- BUA 690 Simulation and Optimization for Business Analytics
BUSINESS ANALYTICS COURSES

Business Analytics Professionals are required to use data, competencies, and capabilities that meet all areas of proficiency when performing their primary job duties. Business Analytics courses are presented as inter-related courses that meet all areas of proficiency.

Choose 7 Business Analytics courses from the following elective courses (including up to 9 credit hours internship) for a total of 21 credit hours.

2 recommended Business Analytics courses for a total of 6 credit hours

BUA 500 Principles of Business Analytics
BUA 501 Quantitative Analysis

BUSINESS ANALYTICS ELECTIVE COURSES

BUA 500 Principles of Business Analytics
BUA 501 Quantitative Analysis
BUA 502 Introduction to Data Analysis
BUA 503 Game Theory, Business Strategy, and Thinking Strategically
BUA 504 Data Warehousing and Visualization
BUA 505 Predictive Analytics for Business Strategy
BUA 506 Developing Value Through Business Analysis Applications
BUA 507 Ethical Business Decision-Making
BUA 508 Risk Analytics
BUA 509 Web Analytics
BUA 510 Data Science Applications with R or Python
BUA 511 Data Visualization and interpretation using Tableau
BUA 512 Business Cognitive Analytics and Applications
BUA 513 Financial Engineering: Computational and Quantitative Methods
BUS 518 Applied Statistics
BUS 688 Special Topics (1-3 credit hours)
BUS 689 Independent Study (1-3 credit hours)
BUS 690 Strategic Management and Business Policy
HCM 535 Data Analytics Applications in Healthcare
HCM 538 Predictive Analytics and Decision Models in Health Care

Students are required to take at least four (4) Business Analytics (BUA) elective courses in order to graduate with a Business Analytics concentration.

Students may take up to three (3) courses (including internship courses and/or transfer courses) from the MBA or Healthcare Management concentrations.

INTERNSHIP

CFL 591 Integrating Academic and Internship Learning (2 credit hours)
INT 593 Part-time/Full-time Internship (1-3 credit hours)

ENTERPRISE RESOURCE PLANNING (ERP)

The Enterprise Resource Planning (ERP)/Systems, Applications, and Products (SAP) concentration was created to provide students a curriculum that is professionally applicable in a global context. The concentration in ERP/SAP prepares students to be competitive in the ever-expanding industry demand for consultants, business process analysts, project managers, systems specialists, SAP functional analysts, and managers across several business domains.

This concentration will prepare students for industry recognized certificates from the SAP University Alliance, and/or complete certifications of interest in a variety of areas such as SAP MM, SD, FI/CO, ABAP, HR, etc.

ERP/SAP develops the following skills areas:

Analytical/ Critical Thinking: Intending ERP/SAP professionals will build analytical skills needed to make decisions based on business operating requirements, technical/technological limitations, and a variety of other factors. Professionals in this field are required to balance competing requirements to develop solutions.

Innovative Thinking: A key skill required of ERP/SAP professionals is the ability to think innovatively, and come up with innovative, cost effective, and operationally viable configuration solutions. This requires students to think outside the box, and use creativity in developing these solutions.

Technical / Computer Programming: A career as an ERP/SAP professional requires involvement in developing and/or overseeing the implementation of functional ERP/SAP modules for complex business requirements. Through practical, hands on classroom assignments, students will learn the nuances of ERP/SAP implementation. This also requires students to be proficient in a certain functional (e.g. marketing, accounting, HR, etc.) or technical (e.g. ABAP) area.

Collaboration & Interpersonal Communication:

Communication is important for ERP/SAP professionals. Their ability to deal with other people is also critical to the success of implementation projects. ERP/SAP implementation experts are often the liaison between business process experts and technical teams. The courses will consist of written and verbal practical communication, active listening and understanding, customer or client engagement, and teamwork.

Emphasis Student Learning Outcomes

The student learning outcomes are intended to improve student learning in the following areas: analytical skills, communication, critical thinking, ethical reasoning, global position, information technology, and the legal systems. Upon completion of the MBA in ERP/SAP concentration, graduates will:

1. Evaluate key organizational processes for points of integration from a systems (ERP/SAP) perspective. [Mapped to PLOs 1,3,4]
2. Design, test, and execute business processes using SAP/ERP configuration tools. [Mapped to PLOs 1,4,5]
3. Formulate strategy (operational and IT) that takes into account current and future technological advances. [Mapped to PLOs 2,4,5]

Enterprise Resource Planning (ERP)/ Systems, Applications, and Products (SAP) ELOs mapping to Business Program Learning Competencies (LCs)

| LC 3: Critical Thinking                                | ELO 1: Evaluate key organizational processes for points of integration from a systems (ERP/SAP) perspective. [Mapped to PLOs 1,3,4]  
|                                                        | ELO 4: Summarize the impact of globalization on organizational decisions especially as they relate to ERP/SAP implementations. [Mapped to PLOs 1,2,4,5] |
| LC 4: Focused Knowledge                                | ELO 3: Formulate strategy (operational and IT) that takes into account current and future technological advances [Mapped to PLOs 2,4,5]  
|                                                        | ELO 5: Appraise and formulate a plan for professional expertise in a particular functional area (e.g. supply chain management, HR, finance, marketing, etc.) [Mapped to PLOs 1,2,3,4] |

ERP/SAP CURRICULUM REQUIREMENTS
The students should successfully complete 36 credit hours. Students should complete the following core courses.

Students should complete the following core courses

4 core courses for a total of 12 credit hours

Required core courses
MGT 503 Organizational Leadership theories  
FIN 534 Financial and Economic Analysis  
MKT 551 Competitive Marketing Strategies  
MIS 527 Technology and Operations Management: Creating value

1 capstone course for a total of 3 credit hours

Capstone Course
MBN 697 MBA Thesis  
OR  
BUA 690 Simulation & Optimization for Business Analytics

To graduate with a concentration in ERP/SAP, students need to complete at least four (4) courses from the following ERP/SAP courses for a total of 12 credit hours

Required ERP/SAP Courses:

ACT 603 Accounting Information Systems/ERP - ITU/SAP University Alliances  
BUS 688 Special Topics (1-3)  
BUS 689 Independent Study (1-3)  
BUS 690 Strategic Management and Business Policy  
ERP 509 Introduction to ERP Systems using SAP - ITU/SAP University Alliances  
ERP 510 ABAP - Advanced Business Application Programming - ITU/SAP University Alliances  
ERP 511 Enterprise Portal technology using NetWeaver - ITU/SAP University Alliances  
ERP 512 Enterprise procurement processes (MM) - ITU/SAP University Alliances  
ERP 513 Sales order management with ERP - ITU/SAP University Alliances  
MIS 545 Data Mining & Business Intelligence using ERP/SAP - ITU/SAP Alliances  
HRM 532 Managing Human Capital using SAP HCM – ITU/SAP University Alliances  
HRM 535 Human Resources and Information Technology using SAP HCM*–
* Students intending to do HRM 535 must complete HRM 532 as a pre-requisite course

Joint Recognition Award

Upon completing 3 of the above ERP/SAP courses with a grade of “B” or above, the student is awarded a joint recognition award from ITU and SAP University Alliances.

Elective Courses

Students may take up to three (3) courses (including internship courses and/or transfer courses) from the MBA, Business Analytics, or Healthcare Management concentrations.

Internship courses:

Up to 3 Internships for a total of 9 credit hours are counted in the total credit hours of 36. The 3 Internships are considered Elective courses.

CFL 591 Integrating Academic and Internship Learning (2 credit hours)
INT 593 Part-time/Full-time Internship (1-3 credit hours)

FINANCIAL ANALYSIS AND RISK MANAGEMENT

The Financial Analysis and Risk Management concentration helps graduate to work as financial analysts. They will use data and information of financial statements for assessment, credit risk valuation, investment, and economic decisions. There is an increasing emphasis on credit, market, and financial risk management.

This concentration will prepare you for the Chartered Financial Analyst (CFA), and for the Professional Risk Management (PRM) exams. It will equip the students with the knowledge to develop both comprehensive financial knowledge and specialized risk management practice. Pursuing this concentration, you will both earn a degree in Finance and be prepared for CFA and FRM exams.

The topics that will be covered in this concentration are the following:

Financial Analysis and Risk Management ELOs mapping to Business Program Learning Competencies (LCs)

<table>
<thead>
<tr>
<th>Learning Competencies (LCs)</th>
<th>Financial Analysis and Risk Management ELOs</th>
</tr>
</thead>
<tbody>
<tr>
<td>LC 1: Communication (spoken, and written)</td>
<td>ELO 5: Summarize the effect of financial analysis and risk management solutions in an economic, environmental, and societal framework [Mapped to PLOs 1,2,4,5]</td>
</tr>
<tr>
<td>LC 2: Leadership (includes individual strengths, and collaboration)</td>
<td>ELO 2: Design strategies that minimize financial risk using financial instruments. [Mapped to PLOs 1,4,5]</td>
</tr>
</tbody>
</table>

Financial Analysis and Risk Management develops five skills areas:

Mathematical / Quantitative: Students will have the chance to develop sound skills in mathematical and quantitative methods. This will involve application in reviewing financial forecasts, trends, and other reports.

Analytical: Intending professionals will build analytical skills needed to make predictive decisions based on models of risk, and other factors.

Innovative Thinking: A key skill required is the ability to think innovatively, and come up with new financial products or service offerings. This requires students to think outside the box, and use creativity in developing financial strategies after a careful consideration of risk.

Technical / Computer Skills: A career in financial analysis and risk management requires professionals to be involved in overseeing the development of complex computer code and algorithms to automate financial decisions. Through the courses in this concentration, students will have the opportunity to develop their technical skills.

Interpersonal Communication: Communication is important for professionals. Their ability to deal with other people is also critical to their success. The courses will consist of written and verbal practical communication, active listening and understanding, customer or client engagement, and teamwork.

Emphasis Student Learning Outcomes:

The MBA in Financial Analysis and Risk Management aims to help students to graduate with the ability to:

1. Illustrate the knowledge of quantitative methods such as mathematics, statistics, and economics. [Mapped to PLOs 4]
2. Design strategies that minimize financial risk using financial instruments. [Mapped to PLOs 1,4,5]
3. Identify, formulate, and solve financial problems from an integrated systems perspective. [Mapped to PLOs 1,2,4,5]
4. Create data modeling tools for predictive financial decision making and risk management. [Mapped to PLOs 1,3,4,5]
5. Summarize the effect of financial analysis and risk management solutions in an economic, environmental, and societal framework. [Mapped to PLOs 1,2,4,5]
ELO 3: Identify, formulate, and solve financial problems from an integrated systems perspective. [Mapped to PLOs 1,2,4,5]

ELO 4: Create data modeling tools for predictive financial decision-making and risk management. [Mapped to PLOs 1,3,4,5]

ELO 2: Design strategies that minimize financial risk using financial instruments. [Mapped to PLOs 1,4,5]

ELO 3: Identify, formulate, and solve financial problems from an integrated systems perspective. [Mapped to PLOs 1,2,4,5]

ELO 1: Illustrate the knowledge of quantitative methods such as mathematics, statistics, and economics. [Mapped to PLOs 4]

ELO 5: Summarize the effect of financial analysis and risk management solutions in an economic, environmental, and societal framework. [Mapped to PLOs 1,2,4,5]

FINANCIAL ANALYSIS AND RISK MANAGEMENT CURRICULUM REQUIREMENTS

The students should successfully complete 36 credit hours. Students should complete the following core courses.

MBN 697 MBA Thesis
OR
MGT 690 Pitching a Business Plan to Venture Capitalists
OR
BUA 690 Simulation & Optimization for Business Analytics

To graduate with a concentration in Financial Analysis and Risk Management, students need to complete at least four (4) courses from the following courses for a total of 12 credit hours

Required Courses
Students are required to possess mathematical, quantitative, and financial knowledge as they navigate complex careers in their fields. The courses are presented as inter-related or interdisciplinary courses that meet all areas of proficiency.

BUA 501 Quantitative Analysis

BUA 508 Risk Analytics
BUA 510 Data Science Applications with R or Python
BUA 513 Financial Engineering: Computational and Quantitative Methods
BUS 518 Applied Statistics
BUS 688 Special Topics (1-3)
BUS 689 Independent Study (1-3)
BUS 690 Strategic Management and Business Policy
FIN 515 Managerial Finance
FIN 516 Entrepreneurial Finance
FIN 517 Financial Institutions
FIN 518 Financial and Socially Responsible Investing
FIN 519 Corporate Valuation
FIN 520 Investment Management
FIN 521 International Financial Management
FIN 522 Behavioral Finance
FIN 523 Macroeconomic Theory
FIN 525 Econometrics
FIN 526 International Economics
FIN 604 Securities Analysis
FIN 605 Financial Derivatives and Risk Management
FIN 606 Corporate Finance
FIN 607 Mergers and Acquisitions

Elective Courses
Students may take up to three (3) courses (including internship courses and/or transfer courses) from the MBA, Business Analytics, or Healthcare Management concentrations.

Internship courses:
Up to 3 Internships for a total of 9 credit hours are counted in the total credit hours of 36. The 3 Internships are considered Elective courses.
CFL 591 Integrating Academic and Internship Learning (2 credit hours)
INT 593 Part-time/Full-time Internship (1-3 credit hours)

HEALTHCARE MANAGEMENT
The Healthcare Management helps students learn the competencies to meet the challenges of today's health care system, while looking for innovative answers for tomorrow.

Healthcare management is one of the fastest growing careers. ITU’s MBA in Healthcare Management prepares students to play a serious role in the industry, by practicing effective leadership skills that support the business insights.

The Healthcare Management curriculum builds on the established strength of management practices, as the manager’s role in diverse healthcare settings continues to grow. The Healthcare major draw on a rich variety of elective courses, including courses in behavioral theories, clinical research, biomedical sciences, and information technology.

The Healthcare Management will give students great opportunities for development. Earning that Master’s degree with ITU will equip graduates with the necessary skills and knowledge to work in a variety of health-care-related environments.

Healthcare Management develop five skills areas:
1. Decision Making: Managers of healthcare facilities are in charge of collecting important information and listening to the arguments to make a decision.
2. Teamwork: Healthcare managers need to work with their staff to make sure the facility is running effectively and successfully. In business, teamwork is essential in many areas to encourage and support colleagues.
3. Financial Management: Healthcare managers need to be familiar with financial management. The managers of all healthcare facilities have budgets they must follow, and they work with accountants and advisers to make sure their facilities stay financially safe.
4. Communication and Interpersonal Skills: It is important to communicate well with patients and colleagues. Healthcare managers work with their own staff, and they interact with clients and professionals. Interpersonal skills are necessary for healthcare managers because they are working with sad, sick, or stressed patients. This creates a challenge, and needs understanding and sympathy.
5. Industry-Healthcare Knowledge: People pursuing a career in the healthcare management need to have scientific and medical knowledge. This will help them communicate effectively with doctors, nurses and medical staff.

EMPHASIS LEARNING OUTCOMES (ELOS):
The Healthcare Management aims to help students to graduate with the ability to:

MIS develops the following skills areas:

**Analytical/Critical Thinking:** Intending MIS professionals are required to be “expert generalists” and be proficient in analyzing business and IT requirements.

**Strategic Thinking:** MIS professionals will be involved in implementing Operational and/or IT strategy for organizations. Coursework will prepare students to think in terms of strategy driven vision, mission, and project plans required for success in organizations.

**Technical Proficiency:** A career as an MIS professional requires some knowledge of IT technologies and associated architectures. MIS coursework will provide students groundwork in practicing their skills in such technical domains.

**Project & Program Management:** MIS professionals at various stages in their career will be involved in managing IT and/or Operations projects as analysts or specialists. A foundation in project/program management principles will be critical to their success.

**Collaboration & Interpersonal Communication:** Communication is important for MIS professionals. Their ability to deal with other people is also critical to the success of IT and/or Operations strategy. The courses will consist of written and verbal practical communication, active listening and understanding, customer or client engagement, and teamwork.

**Emphasis Student Learning Outcomes**

These learning outcomes are intended to improve student skills and knowledge in the following areas: analytical skills, communication, critical thinking, ethical reasoning, global position, information technology, and the legal systems. Upon completion of the MBA in MIS concentration, graduates will:

1. Identify the role of Management Information Systems in leadership decision making to attain competitive advantage. [Mapped to PLOs 1,4,5]
2. Design and develop information systems to present solutions to business needs. [Mapped to PLOs 1,2,3,4]
3. Generate the strategic plans in terms of direction, mission, and vision for information systems projects. [Mapped to PLOs 1,2,4,5]
4. Construct a coherent plan that addresses laws and regulations, compliance, and security concerns within a business entity. [Mapped to PLOs 2,3,4,5]
5. Explain and develop an efficient MIS project that meets relevant professional criteria and principles. [Mapped to PLOs 2,3,4,5]

MANAGEMENT INFORMATION SYSTEMS CURRICULUM REQUIREMENTS

The students should successfully complete 36 credit hours. Students should complete the following core courses.

**Students should complete the following core courses**
4 core courses for a total of 12 credit hours

**Required core courses**
- MGT 503 Organizational Leadership theories
- FIN 534 Financial and Economic Analysis
- MKT 551 Competitive Marketing Strategies
- MIS 527 Technology and Operations Management: Creating value

1 capstone course for a total of 3 credit hours

**Capstone Course**
- MBN 697 MBA Thesis
- OR
- MGT 690 Pitching a Business Plan to Venture Capitalists

To graduate with a concentration in MIS, students need to complete at least four (4) courses from the following MIS courses for a total of 12 credit hours

**Required MIS Courses:**
- ACT 603 Accounting Information Systems/ERP
- BUS 520 Emerging Technologies for Product Development
- BUS 521 Management of Technology and Innovation
- BUS 690 Strategic Management and Business Policy
- MGT 572 High-Technology Entrepreneurship
- MIS 537 Management Information Systems
- MIS 538 Business Database Applications
- MIS 539 Business Telecommunications
- MIS 540 Information Resource Management
- MIS 541 Managing Global Information Systems Projects
- MIS 542 Information Systems Innovation
- MIS 543 Human-Computer Interaction
- MIS 544 Business Decision Support Systems
- MIS 545 Data Mining & Business Intelligence using ERP/SAP - ITU/SAP

**University Alliances**
- MIS 546 Data Science for Business
- MIS 547 Software Development Process Management
- MIS 548 Knowledge Management

**Elective Courses**
- Students may take up to three (3) courses (including internship courses and/or transfer courses) from the MBA, Business Analytics, or Healthcare Management concentrations.

**Internship courses:**
Up to 3 internships for a total of 9 credit hours are counted in the total credit hours of 36. The 3 Internships are considered Elective courses.

- CFL 591 Integrating Academic and Internship Learning (2 credit hours)
- INT 593 Part-time/Full-time Internship (1-3 credit hours)
The Project Management concentration was created to provide students with the skill set to "hit the ground running" as project/program/portfolio managers in a variety of contexts (e.g. software, construction, etc). The modern project manager bears responsibility to supervise myriad aspects of projects such as time, costs, risks, and others.

This concentration will help prepare students for industry recognized certifications such as PMP, CAPM, PMI-ACP, etc.

Project Management develops the following skills areas:

**Leadership & Management:** This is one of the most critical skills required of intending Project Managers. Coursework in leadership, and project management seeks to hone this skillset in students. In addition, campus clubs and extra curricular activities will provide students to practice these skills in a non-threatening, non-judgmental environment.

**Strategic Thinking:** Project Managers will be involved in implementing managing several projects at a time. It is critical for students to understand organizational constraints, client vision, as well as other strategic areas in order to be successful in their roles. Through their coursework, students will understand each of these components and their interactions to maximize their success on the job.

**Problem Solving:** In their roles as project managers, students will be required to employ specific frameworks to identify and solve the problems they are faced with on projects. Coursework will equip students with the academic and practical knowledge of problem solving techniques. Case studies, and other in-class problems, will challenge students to identify innovative solutions to problems identified.

**Organizational Awareness:** As a project manager involved with several stakeholders and clients, students will be required to understand the hierarchy of, and the structure of the organization(s) they are working with. This awareness makes a great contribution to the project manager’s abilities to identify problems, and provide innovative solutions to problems identified.

**Collaboration & Interpersonal Communication:**
Communication is critical for Project Managers. Through the course of their work, they liaise with a variety of people internal and external to the organization such as senior executive, IT teams, and business operations teams. The courses will consist of written and verbal practical communication, active listening and understanding, customer or client engagement, and teamwork. In addition, campus clubs and extra curricular activities will provide students to practice their communication skills in a non-threatening, non-judgmental environment.

**Emphasis Student Learning Outcomes**
The student learning outcomes are intended to improve student learning in the following areas: analytical skills, communication, critical thinking, ethical reasoning, global position, information technology, and the legal systems.

Upon completion of the MBA in Project Management concentration, graduates will:

1. Examine individual enterprise projects for effective selection and initiation [PLOs 1,3,4]
2. Design project plans that accurately forecast project parameters such as costs, budgets, timelines, and quality. [PLOs 1,2,4,5]
3. Devise processes for successful project monitoring, such as resource procurement, team scheduling and communication, quality control, and risk and change management. [PLOs 1,2,3,4]
4. Formulate strategies to report effectively on project performance, and deliverables in line with stakeholder expectations. [PLOs 1,2]
5. Appraise and apply traditional and agile project methodologies to ensure appropriate outcomes in line with organization or client requirements. [PLOs 1,3,4,5]

DOCTOR OF BUSINESS ADMINISTRATION PROGRAM

Program Overview
In the face of increasing competition, it is no longer sufficient to work harder and faster. Companies call upon people with advanced degrees. It is in this context that the International Technological University (ITU) Business Department offers the Doctorate of Business Administration (DBA) in Strategic Innovation degree.

The DBA is a professional doctoral program intended for executives, senior managers, consultants, advanced students, instructors of business and outstanding business practitioners who will continue to be professionally engaged in organizations. ITU bridges the gap between learning and application with our expert professors, industry mentors, and support resources.

The DBA delivers a powerful program designed to create experts in evidence based business problem solving. It enhances critical thinking, analytical skills, and leadership abilities. It also enables the development of management thought, embedded with the application of real-world business principles.

ITU’s DBA program is offered as an innovative and flexible blended learning journey, in a global model setting, with live residencies to network with cohort peers, professors, and expert industry mentors.

Advisory Committee
To guide students through the degree program, an advisory committee of at least three (3) faculty members with appropriate doctoral degrees, and an external mentor with subject matter and industry expertise, will be assigned. The advisory committee also may serve as the Doctoral Capstone Committee (DCC), which may include the Department Chair. The doctoral capstone course advisor will serve as the chair of DCC. The DCC will review the proposed doctoral capstone topic, determine any further changes, and approve the research objective.

Program Learning Outcomes
Upon completion of this program, graduates will:

PLO #1: Appraise the theoretical knowledge and relate it to use in business practice. [Mapped to ILOs 3, 6]
PLO #2: Relate appropriate research methodology to evidence based business decision-making. [Mapped to ILOs 1, 2, 5, 7]
PLO #3: Devise competencies for managing technology, innovation, and organizational change. [Mapped to ILOs 1, 2, 5, 7]
PLO #4: Identify strategies to solve business challenges within a global context. [Mapped to ILOs 1, 2, 3, 4, 7]
PLO #5: Formulate original research, which includes research design, tools and structure. [Mapped to ILOs 3, 5, 6]

PLO #3: Devise competencies for managing technology, innovation, and organizational change. [Mapped to ILOs 1, 2, 5, 7]

Program Requirements

Peregrine Inbound and Outbound Exam
All DBA students are required to take the Inbound and Outbound exam with Peregrine Academic Services. The Inbound Exam should be taken in the first (1st) trimester of the DBA Program. The Outbound Exam should be taken in the sixth (6th) trimester, before the student starts working on their Culminating Experience (CE) course.

The Inbound and Outbound exams have a fee of $40 per exam, per student (the fee is subject to change).

The Inbound and Outbound exams are REQUIRED and not OPTIONAL.

In addition, students are required to complete an APA Write & Cite course from Peregrine Academic Services. The price per student for the course is US $49.
For more information about the Peregrine Exams, and the APA Write & Cite course, visit the DBA INBOUND AND OUTBOUND EXAMS webpage and the course description for DBUS 806 respectively.

Peregrine Inbound and Outbound Exams Registration Instructions:
Please follow the on-screen instructions found at the following URL: https://micro.peregrineacademics.com/itu

Learning Styles
The world is becoming increasingly connected with technological advances and social media. More than ever before, people are increasingly aware and interested to learn about technology, and its interactions with various aspects of global business.
In order to accommodate the needs of the people resident in the U.S. and across the globe, ITU offers the DBA program in a global, blended learning format.

Why does ITU offer the DBA in a global model?
- ITU is well known for its global education. We believe in diversity and inclusion as an enriched learning opportunity. We offer high quality education, as endorsed by accrediting institutions (WASC and ACBSP).
- Based on a growing need for a DBA among professionals who do not have the time to commute to campus, ITU provides this doctorate in strategic innovation in a global, blended format.
- The blended learning format provides access for students around the world to undertake doctoral study in a manner that provides for intensive classroom education, team projects, and distance learning technologies in an integrated manner.
- We wish to reach everyone across the globe with this opportunity to be ITU doctoral graduates.

Program Structure
The DBA in Strategic Innovation program may be completed in a minimum of three (3) years and a maximum of eight (8) years.

To be awarded the degree of DBA in Strategic Innovation, you must successfully complete forty eight (48) credit hours including the following:

1. **Coursework**: Thirty nine (39) credit hours of coursework,
2. **Contribution to the field of business research**: (a) Seminars and/or Conferences, (b) Comprehensive Candidacy Portfolio (CCP),
3. **Culminating Experience (CE)**: Nine (9) credit hours of Culminating Experience (CE), AND,
4. **Residencies**: The DBA program requires four (4) residencies as follows:
   a. **Residency 1**: At the beginning of Term 1 of Year 1;
   b. **Residency 2 and 3**: At the end of Term 3 of Year 1 and 2, and at the beginning of Term 1 of Year 2 and 3; AND
   c. **Residency 4**: At the end of Term 3 of Year 3.
Transfer Credits
ITU Business Department will accept up to 12 credit hours to be transferred from Doctoral Programs from an accredited university. The transfer credits will be contingent upon an assessment of fit with ITU’s DBA curriculum. The Chair of the Business Department will make the decision and approve the transfer credits.

1. Coursework
(i) Core Courses
6 courses for a total of 18 credit hours
DBUS 800 Quantitative Research Analysis I (3 credit hours)
DBUS 801 Quantitative Research Analysis II (3 credit hours)
DBUS 802 Qualitative Research Analysis I (3 credit hours)
DBUS 803 Qualitative Research Analysis II (3 credit hours)
DBUS 804 Data Analytics I (3 credit hours)
DBUS 805 Data Analytics II (3 credit hours)
DBUS 806 Peregrine APA Write & Cite (0 credit hours)

(ii) Innovation Specialization Courses
3 courses for a total of 9 credit hours
DBUS 810 Financial Engineering and Innovation (3 credit hours)
DBUS 811 Innovation and Digital Transformation (3 credit hours)
DBUS 812 Strategy for Disruptive Innovation (3 credit hours)

(iii) Research Interest Courses
2 courses for a total of 6 credit hours
DBUS 700 Behavioral Marketing, Digitization, and Decision Making (3 credit hours)
DBUS 701 Innovation in Business Transformation and Entrepreneurship

(iv) Key Competency Courses
2 courses for a total of 6 credit hours
DBUS 820 Theoretical Frameworks in Strategy Research (3 credit hours)
DBUS 821 Research Design (3 credit hours)

2. Contribution to the field of business research
Seminars and/or Conferences
DBUS 710 Special Interest Seminars and/or Conferences (0 credit hours)

Students should complete at least four (4) Seminars and/or Conferences (free or paid) in the area of their research interest. Students should start attending seminars and/or conferences from the very start of their doctoral program. The requirements for seminars and/or conferences must be completed prior to the final CCP presentation (i.e. DBUS 822), which will occur in the third residency. Students may attend more than four seminars and/or conferences based on their interest. However, Students should choose topics in the area that strengthens their CE research interest and their CCP.

For each seminar and/or conference attended, students must write a paper. In the course DBUS 710, which will be conducted in the last trimester of the second year of the program, students are required to upload on EMS, the papers prepared from attending the seminars and/or conferences. Confirmation of registration for these events must also be included as part of the documents uploaded on EMS.

Comprehensive Candidacy Portfolio (CCP)
DBUS 711 CCP Panel Presentation I (0 credit hours)
DBUS 813 CCP Panel Presentation II (0 credit hours)
DBUS 822 CCP Final Panel Presentation (0 credit hours)

The student from the start of his/her doctoral program develops the CCP, under the guidance of the doctoral supervisor(s) and/or mentor(s) in three stages. The CCP represents a student’s goals, plans, and accomplishments in coursework, special topics, learning from seminars and/or conferences, research and work experiences.

The process includes three (3) presentations by each student to a committee, which includes the faculty teaching the DBA courses at the time of presentation and/or the external mentor.

These presentations will be scheduled as follows:
• CCP Presentation I – Term 2 of Year 1
• CCP Presentation II – Residency 2
• CCP Final Presentation – Residency 3

The goal of the CCP is to ascertain the student’s capability to conduct doctoral business research. The portfolio must be aligned with the student’s topic of research in the Culminating Experience (CE). Therefore, the student is required to receive a “Pass” decision from the committee in order to progress to the CE phase of his/her degree. Upon successful completion of the coursework and the CCP, the candidate will start working on his/her CE.

Culminating Experience (CE)
Candidates must choose one of the following three (3) doctoral capstone courses. Each of these courses is equal in terms of academic rigor.
• Doctoral Capstone Research (DBUS 901), OR
• Doctoral Capstone Project (DBUS 902), OR
• Doctoral Capstone Publishable Papers (DBUS 903) (3 publishable papers)

Each capstone course consists of three (3) sections for a total of 9 credit hours
DBUS 901 – 1 Doctoral Capstone Research 1 (3 credit hours)
DBUS 901 – 2 Doctoral Capstone Research 2 (3 credit hours)
DBUS 901 – 3 Doctoral Capstone Research 3 (3 credit hours)
OR
DBUS 902 – 1 Doctoral Capstone Project 1 (3 credit hours)
DBUS 902 – 2 Doctoral Capstone Project 2 (3 credit hours)
DBUS 902 – 3 Doctoral Capstone Project 3 (3 credit hours)
OR

DBUS 903 – 1 Doctoral Capstone Publishable Papers 1 (3 credit hours)
DBUS 903 – 2 Doctoral Capstone Publishable Papers 2 (3 credit hours)
DBUS 903 - 3 Doctoral Capstone Publishable Papers 3 (3 credit hours)

Each of these courses requires the candidate to work on his/her doctoral proposal.

**Doctoral Capstone Proposal**

This is a formal written proposal, which must include a clear statement of the problem to be researched and a survey of the relevant literature. The proposal must specify the research methods, data collection, and data analysis techniques in detail. The methods to be employed must be appropriate, reliable, and appropriate for the measures taken.

A candidate intending to complete his/her DBA degree within three years is required to present and defend the doctoral capstone proposal to the DCC at the end of the first (1st) term of the third (3rd) year. In the event the DCC recommends additional work on the proposal, the candidate will have one more chance to present and defend his/her doctoral proposal, no later than six (6) months from the original presentation.

**Doctoral Capstone Defense**

Upon successful presentation of the doctoral proposal, the candidate will progress to the development of his/her chosen doctoral capstone (DBUS 901, 902, or 903). The candidate will be required to defend his/her final doctoral capstone in the presence of the DCC. The final capstone document(s) must be made available to all members of the DCC one (1) month prior to the defense.

The oral defense will take place in the final term of the third (3rd) year. It shall consist of a presentation of the research results and a question and answer (Q&A) session following the presentation. The defense is open to the public, but only members of the DCC have a vote. The doctoral capstone defense passes through unanimous voting.

The following table presents the DBA in Strategic Innovation program roadmap.

---

The blended learning format has two (2) distinct components: face-to-face, and distance learning interactions. Blended learning allows students to obtain the relevant course information at a time and place suitable to them, beyond constraints of time and geography.

The courses within the DBA program with the global model will follow the rigor and format of ITU’s DBA on-campus program. Our courses are offered in three (3) terms; Fall, Spring, and Break.
Spring, and Summer with 15 weeks of teaching. However, for orientation purposes, and to provide students with the opportunity to meet with their peers and faculty at the start of the program, the DBA in the global model will start with one week of residency in the first week of the start of the program.

Technological Requirements
As part of their doctoral study, students are required to have access to a personal computer. ITU makes no demands on what type of computer or device students must have. However, students will need to have word processing software such as Microsoft Word installed on it. In addition, students will require presentation and data analysis software such as Microsoft PowerPoint, and Microsoft Excel respectively. In addition, as part of coursework, students will be required to install statistical analysis software such as SPSS, and/or run code (in languages such as R/Python) for data analytics purposes.

COURSE DESCRIPTIONS

ACT (ACCOUNTING)
ACT 500 FINANCIAL ACCOUNTING (3)
Prerequisites: None
This course provides an introduction to basic theory and methods of financial accounting. It is designed to offer managerial users the foundations of accounting concepts. The course helps the students understand financial statement information. Focus will be on accounting for assets (e.g., Accounts Receivable, Inventories, Property, Plant and Equipment, Intangible Assets), liabilities (e.g., Bonds, Deferred Taxes) and owners’ equity. Focus will be also on the presentation of the income statement through Net Income, revenues and expenses. Class sessions develop the understanding of the different steps of the accounting cycle, and of the financial statements that give the managers the ability to use them for decision-making.

ACT 501 FORENSIC ACCOUNTING (3)
Prerequisites: None
This course explores the forensic accountant’s role in today’s economy. The course is designed to enhance a student’s understanding of the emerging field of forensic accounting. The course is structured to enhance the ability of students to think critically and to develop the knowledge, skills and attitudes necessary to compete effectively in the rapidly changing world of accounting using the traditional method of detecting fraud and using the current technology. By the end of the course, students should be able to understand the causes of fraud and white-collar crime, examine the types of fraud and fraud schemes, explore methods of deterring and detecting fraud, and examine the financial impact to businesses and the economy.

ACT 502 INTERNATIONAL ACCOUNTING (3)
Prerequisites: None
The knowledge of accounting requirements and the influence of environmental factors on accounting systems both nationally and internationally becomes important to the accounting professional. Topics of financial accounting for international operations, multinational managerial accounting and control, comparative international accounting, international reporting issues, and international taxation are examined. The focus of the course is to solve the problems related to accounting for multinational corporations doing business in a global environment. This course covers the topics of currency translation and foreign currency gains and losses and accounting for international accounting organizations.

ACT 504 TAX ACCOUNTING PRINCIPLES (3)
Prerequisites: None
This course introduces federal tax law, including the preparation of individual income tax form 1040 and related schedules. Tax accounting principles, such as the measurement of income, asset exchanges, capital transactions, and business expenses are examined. Topics include corporate income tax, subchapter S, dividends, and liquidating distributions. The course also provides tax knowledge through identification of significant differences between tax and financial accounting.

ACT 600 MANAGERIAL ACCOUNTING (3)
Prerequisites: ACT 500, or basic knowledge of accounting
This course introduces the students to the principles of managerial accounting, which is the internal use of accounting information to manage modern firms, including planning, analysis, and decision-making. This course focuses on information generated by internal accounting information systems to evaluate organizational performance, methods to evaluate financial alternatives, and create financial plans. Topics will include interpretation of financial statements, cost behavior, cost allocation, budgets and cost control. Other topics such as decentralization, product costing, job and process costing, break-even analysis, and absorption costing will also be discussed.

ACT 601 COST ACCOUNTING (3)
Prerequisites: ACT 500, or basic knowledge of accounting
This course applies cost accounting concepts and accounting tools to make management decisions. Students learn to use cost accounting to evaluate and make strategic business formulation, research and development, budgeting, production planning, pricing, and provide information for management accounting and financial accounting. Other topics include financial statements, concept of depreciation and inventory methods, cash flows, business valuation, working capital, cost behavior, cost allocation, budgets, and control systems.

ACT 602 INTERMEDIATE ACCOUNTING (3)
Prerequisites: ACT 500, or basic knowledge of accounting
This course will provide a comprehensive review of the accounting process that discussed in Financial Accounting (ACT 500). Students will learn and deepen their understanding of the preparation of classified financial statements. Students will also learn other information and apply analytical tools in making both business and financial decisions. This course will also include topics related to cash flows, accounting for a company's financing and investing activities and related tax accounting; primary current assets, current and long term liabilities; amortization of bond premiums and discounts, journal entries associated with issuance of preferred, common stocks, and treasury stocks, and declaration of dividends; owners' equity
and earnings per share; and time value of money. Students will study how to record various financial transactions and understand the impact on the usefulness of the information provided for decision-making. During coverage of these topics, discussion will include a development of the understanding of full and fair disclosures based on GAAP, ethical and moral implications, and the related concept of transparency.

**ACT 603 ACCOUNTING INFORMATION SYSTEMS/ERP (3)**

*ITU/SAP University Alliance*

**Prerequisites: ACT 500, or basic knowledge of accounting**

This course addresses the development and use of accounting information systems for managerial control and external reporting, focusing on reporting objectives, management needs, documentation, security, and internal controls. The course will cover concepts and principles of financial accounting fundamentals and how to identify measure and report on the financial effects of economic events on enterprises. Topics include accrual accounting concepts; preparation, understanding and analysis of financial statements; accounting for sales and cost of sales and procurement of materials. The course will focus on designing computer systems to perform accounting functions, and extensive use of applications of different microcomputer accounting software packages. This course will prepare the student to understand the basic structure and procedures of financial and management accounting in the SAP System and to maintain master data and perform essential function in General Ledger, Account Payable, Account Receivable, Cost Center Accounting and Internal Orders and to describe how Financial and Management Accounting interact with other in SAP process. The course will be covered in 6 weekend classes as per the schedule. The course is presented in lecture format and hands-on problem solving exercises.

**ACT 604 Auditing (3)**

*Prerequisites: ACT 500 or basic knowledge of accounting*

This course covers Generally Accepted Auditing Standards (GAAS) as they apply to the study of audit preparation and procedures, creating working papers, and audit write-up. In addition, the financial statement audit for entities that are not regulated under Sarbanes-Oxley Act 2002 will be addressed. The course also covers internal and external audit procedures and a comprehensive study of professional auditing ethics, legal, and professional responsibilities, auditing planning, risk assessment, internal control, audit evidence, completion and reporting.

**BIO (BIO-MANAGEMENT)**

**BIO 500 CLINICAL RESEARCH MANAGEMENT (3)**

*Prerequisites: Any Biology background: Academic or Professional*

This course is designed to create an in-depth understanding of the clinical research methodologies including the regulatory aspects of clinical research. This course will help you to understand and apply scientific principles to the implementation of clinical research whether it is investigator-initiated, or industry-sponsored study. The student will learn to design and present a concept sheet for a Phase I/II and Phase II/III clinical trial. Also addressed in this course are different types of study design, their relative strengths and limitations, and proper choice of study design. The student will also learn to systematically implement the research protocol and evaluate the integrity of the clinical research outcome. In this course, students learn to apply knowledge of data management, information management and scientific communication. Students will explore opportunities to demonstrate professionalism and accountability in the implementation of research studies through applying management.

**BIO 501 MODERN MEDICINE AND BIOLOGY (3)**

*Prerequisites: None*

In this course, students will explore the cross-pollination of ideas and advances in biology and how they transform medicine, both at the bedside and in drug development. Many of the advances in biology have radically transformed the understanding of disease states and how medicine is practiced. For example, genomic sequencing is now being widely adopted as a method for diagnostics as well as for drug development. Bioinformatics is another area where huge data management and mining is paving way to understand the complex biological pathways and signaling mechanisms in cells and organs. Other advance in the field of computer science and algorithm development have been adopted to unravel these complex connections and arrive at a better understanding of cellular and molecular physiology. Physical and mechanical innovations drive devices that have better resolution in the areas of imaging for diagnostics.

**BIO 506 BIOTECH INDUSTRY FUNDAMENTALS (3)**

*Prerequisites: None*

This course will introduce students to biotechnology, its principle, and application. A solid knowledge of basic molecular biology is required to gain a complete understanding of the concept and its application. Biotechnology has a broad reach – from agriculture, to biofuels, waste management, medical, forensics, and food. Students will learn to apply modern biological principles and understand the trends in modern medicine, food, and green technologies. By the end of the course, students should be able to critically assess current and future applications of biotechnology in agriculture, drug development and environmental management. This course is a prerequisite course for students in Healthcare Management, and Bio Management streams. Students will benefit immensely if they enroll in this course first before taking any of the other advanced courses. A background in junior-level chemistry and biology is recommended.

**BIO 510 ETHICS IN MEDICAL RESEARCH (3)**

*Prerequisites: None*

This course will inform students about the basic principles essential to making educated decisions about ethics in medical research. Understanding the basic principles is critical before conducting clinical research activities. Topics include: historical perspectives, federal regulations,
BUA 500 PRINCIPLES OF BUSINESS ANALYTICS (3)
Prerequisites: None
In this course students will learn the key foundations and tools of Business Analytics and data science. This is a general introductory course that lays the foundations of analysis methodologies for business students in general and is open to all students in the business major. The fundamentals skills that students will learn are: applied understanding of mathematical concepts, hands-on programming skills (Python or R) and preliminary and exploratory data analysis. Students will learn about key ideas in uncertainty modeling using statistics and probability and get exposed to concepts such as random variables, probability distributions, hypothesis testing and descriptive statistics, and linear algebra such as linear spaces and matrix algebra. In the programming section of the course students will gain hands-on experience using popular programming languages used in analysis such as Python. Students will use the mathematical concepts and the programming skills to perform exploratory data analysis on real world data sets.

BUA 501 QUANTITATIVE ANALYSIS (3)
Prerequisites: None
QUANTITATIVE ANALYSIS COURSE INTRODUCES STUDENTS TO THE MAIN MODELING AND SIMULATION STRATEGIES IN QUANTITATIVE ANALYSIS FIELD WITH A STRONG EMPHASIS ON PRACTICAL OUTCOMES WHICH CAN BE DIRECTLY APPLIED TO A BUSINESS ENVIRONMENT. IT PROVIDES A BRIEF OUTLINE OF EXISTING THEORIES, TECHNOLOGIES AND APPLICATIONS WHICH SUPPORT THE MODERN DECISION-MAKING PROCESS WHICH IS TO A LARGE EXTENT, DATA-DRIVEN. IN THIS COURSE, STUDENTS WILL HAVE AN OPPORTUNITY TO WORK ON TOOLS LIKE EXCEL AND ADVANCED ADD-ONS, THAT HELPS WITH PERFORMING ADVANCED ANALYSIS TECHNIQUES SUCH AS REGRESSION AND FORECASTING. UPON COMPLETION OF THIS COURSE, STUDENTS WILL BE ABLE TO IDENTIFY ANY BUSINESS PROBLEMS THAT CAN BE POTENTIALLY MODELED AND SIMULATED AND JUDGE WHETHER AN OPTIMAL SOLUTION EXISTS, UNDERSTAND THE IMPORTANT ISSUES IN THEIR IMPLEMENTATION, DESCRIBE THE TOOLS THAT HAVE BEEN USED IN THE PROCESS FROM THEIR FRAMEWORKS TO THE TECHNIQUES USED, DETERMINE THE BUSINESS VALUE OF OUTCOMES OF THE QUANTITATIVE ANALYSIS AND ALSO APPRECIATE ITS ROLE IN BUSINESS PROCESS MANAGEMENT.

BUA 502 Introduction to Data Analysis (3)
Prerequisites: None
This course presents an introduction to the data analysis environment. It lays the foundations of analysis methodologies for business students in general and is open to all students in the business major. The fundamentals skills that you will learn are:

- Applied mathematical concepts (e.g. Linear algebra, linear spaces and matrix algebra),
- Key ideas in statistics (e.g. uncertainty modeling, probability, random variables, hypothesis testing and descriptive statistics),
- Usage of programming language(s) (e.g. Python or R) for business decision making, and
- Preliminary and exploratory data analysis.

A strong base of data analysis for business decision-making is a key skill. You will learn how to drive business recommendations and organizational change using data. Data analysis tools and procedures also drive the field of Business intelligence in order to make effective decisions. The course will introduce the relationship between business intelligence and data analysis, and explain how businesses can use both to provide a cohesive solution to their “data puzzle”. You will use Python libraries such as Matplotlib to go through the process of data analysis, which includes:

- Developing a question
- Formulating the data into a usable format and solving any related problems
- Visualizing and generating insight about the data
- Concluding and/or predicting results
- Presenting outcomes

BUA 503 GAME THEORY, BUSINESS STRATEGY AND THINKING STRATEGICALLY (3)
Prerequisites: None
The focus of this course is the use of game theory to define the most likely outcome of business situations, especially where there is a communication between two or more decision makers to build business strategy. In addition, students will be introduced to methods in strategic thinking and its connections with current game theory to resolve strategic business problems. Students will need skill at numerical reasoning for this course.

BUA 504 DATA WAREHOUSING AND VISUALIZATION (3)
Prerequisites: None
This course discusses the principles of data warehousing, design and implementation along with related software tools. Topics consists of data warehouse architecture, dimensional model design, physical database design, data integration and visualization, and data warehouse administration. The course also builds core skills for visual study of data among students. Trends and tools in data visualization will be explained with a special focus on recognizing patterns and trends from large datasets. Knowledge in database management recommended.

BUA 505 PREDICTIVE ANALYTICS FOR BUSINESS STRATEGY (3)
Prerequisites: None
This course explains information technology, modeling methods and data sciences to familiarize students with the field of predictive analytics. Prior course work in data warehousing and visualization will add to this course, which
builds on assessing data within the business context, understanding data trends and risk assessment. Through this course, students will learn how to build reliable predictive models for developing business strategy geared at organizational competitive advantage.

**BUA 506 DEVELOPING VALUE THROUGH BUSINESS ANALYSIS APPLICATIONS (3)**
*Prerequisites: None*
This course discusses the role that the business analysis plays in exploring and visualizing outcomes to create better outcomes, thereby creating organizational value. Students will be equipped with different tools and application knowledge to drive winning stakeholder outcomes through ongoing business analysis.

**BUA 507 ETHICAL BUSINESS DECISION MAKING (3)**
*Prerequisites: None*
This course introduces the ethical issues involved in the “big data” world and its effects on strategic business decisions. In studying real life case studies, existing practices and issues with developing trends, students understand the ethical dilemmas related to data identity, privacy, ownership and organizational reputation. This in turn will prepare the students to make more informed and ethical decisions related to organizational data.

**BUA 508 – RISK ANALYTICS (3)**
*Prerequisites: None*
This course builds statistics and data modeling with a focus on risk theory and management. Students gain exposure to present trends in enterprise risk logical methods. This enables students to understand and implement risk management structures in the organizational environment. Major risk categories such as financial risk, strategic risk and operational risk will be covered along with analytical methods to these risk groups.

**BUA 509 – WEB ANALYTICS (3)**
*Prerequisites: None*
The Internet is one of most powerful tools of business today. This course develops practices to analyze qualitative and quantitative data from website. Related topics, such as text mining and web mining will also be covered. In addition, this course provides students with the tools to drive constant enhancement of online experiences to customers; both current and future. Topics include Google Analytics and A/B Testing. Incoming traffic characteristics such as client browser, language, computer attributes and geolocation will also be covered.

**BUA 510 DATA SCIENCE APPLICATIONS WITH R OR PYTHON (3)**
*Prerequisites: BUA 500 or Equivalent*
This course focuses on implementation of business analytics problems using a structured programming language such as R or python. Examples of descriptive and predictive business analytics problems such as linear regression, decision analysis, forecasting will be used and implemented using R and Python programming languages. Basic ideas of implementation of an algorithm in R, are discussed. Concepts such program I/O, reading data and visualization of the data, exceptions, conditional statements and statistical packages will be discussed. The course emphasizes hands-on experience and implementation of business analysis ideas in R and Python using pre-existing libraries. It is recommended that students be familiar with basic ideas in statistical modeling and business analytics to maximize the learning outcome of this course.

**BUA 511 Data Visualization and interpretation using Tableau (3)**
*Prerequisites: None*
One of the key skills required for business analytics is the ability to communicate the results of data-driven analysis to non-technical decision makers. To effectively communicate a complex analysis that results in actionable advice one needs to be familiar with the factors that impact decision makers. In this course you will learn how to become a master at communicating business-relevant implications of data analyses. After finishing this course you will be able to effectively import data, clean and transform it and convey the results of the analysis to the stakeholders. You will also know how to streamline your analyses and highlight their implications efficiently using visualizations in Tableau, the most popular visualization program in the business world. Using other Tableau features, you will be able to make effective visualizations that take advantage of innate perceptual and cognitive tendencies of a human brain to convey conclusions directly and clearly.

**BUA 512 BUSINESS COGNITIVE ANALYTICS AND APPLICATIONS (3)**
*Prerequisite: BUA 500 or equivalent*
This course focuses on advanced topics in Cognitive Analytics. After completion of this course students will become familiar with the analysis of case studies from large companies such as Amazon, Walmart, and Facebook and how they use advanced business analytics techniques to effectively perform market segmentation, targeted marketing and supply chain management. With the abundance of unstructured and unlabeled data from social media, e-commerce website, companies are using data-driven analytics to understand the patterns in customers’ reaction to introduction of new products and their preferences. Content management marketing, content generation and optimum supply chain strategies will be some of the business application areas that the new techniques will be applied. Students will learn the implementation of these advanced techniques in business decision making using some of the tools they have already learned in the previous business analytics classes.

**BUA 513 Financial Engineering: Computational and Quantitative Methods (3)**
*Prerequisites or concurrently: FIN 534 or equivalent*
Mathematically sophisticated financial models are the foundation of a successful CFO, investment banker or investment managers. For example, valuing the call provision in a callable convertible bond is important to the CFO of the issuing company (who decides whether or not to include the call provision in the issue). This course focuses on the mathematical foundations used in financial engineering and implementation of these concepts using Python and the relevant computational finance libraries.
The students will learn about quantitative methods used in financial engineering and cover topics such as Black-Scholes-Merton Model, Levy Model, volatility models, multi-asset models, European and US option pricing models, Monte-Carlo Simulation for Put Option modeling, Bond valuation and Hedging.

This course offers an understanding of the latest financial tools and products, of the recent developments and rational of Risk and Risk Management, used to hedge equity, currency and interest rate risk in key financial markets. The course will also highlight methods to assess and measure the financial risk.

**BUA 690 SIMULATION AND OPTIMIZATION FOR BUSINESS ANALYTICS (3) - Capstone course**

*Prerequisites: MGT 503; Completion of 27 credit hours in the program*

Decision making is a critical part in any business. Business Analytics provides solutions to businesses worldwide with the advanced analysis techniques and tools. Optimization and simulation are two such methods that are being used in many business environments that involve decision making. In this course students will be able to examine and identify the classical and modern optimization techniques used in today's business environment. Few areas where these techniques can be used are selection of portfolio in finance, transportation industry, resource allocation of any industry, and minimizing the advertising cost in marketing. Focused on linear and the nonlinear programming techniques and their application in business environment and modern simulation and optimization techniques, this course helps students understand the need and use of decision making using these techniques.

**BUS (BUSINESS)**

**BUS 500 PROJECT MANAGEMENT FRAMEWORKS (3)**

*Prerequisites: None*

This course is designed to be the main structure related to the Project Management fundamentals for students who look to understand, practice, and improve the project execution process. This is based on the best practices and methods of project management implemented, such as PRINCE, PMI, PMBOK, and Microsoft Framework. This is to run projects in an agile organization toward effective implementation and efficient achievements.

**BUS 501 STRATEGIC PLANNING & PORTFOLIO MANAGEMENT (3)**

*Prerequisites: None*

This course is designed to interpret the strategic values and vision of the enterprise's portfolio management. The process is to recognize the company plan and strengthens its service offered in strategic business plan. The course’s objective is to explain how a Project Management Oriented Business is able to divide the strategic planning into operational goals, which are attained by each division. Service analysis measures performance in the light of the company strategy and the business environment, with the goal of choosing and performing services that generate greatest value while incurring least risk for the business.

**BUS 502 PROJECT MANAGEMENT & LEADERSHIP (3)**

*Prerequisites: None*

This course is an overview of project management with an emphasis on leadership and team building. The first part focuses on the traits of successful leaders and the dos and don’ts for building effective teams. The second part introduces the project management framework and the different steps of the project management process. The third part describes how leadership practices can affect key management aspects of the project, such as scope, time, cost, human resources, stakeholders and communications. This course will also provide the basic knowledge necessary to prepare for the ASQ CQIA, ASQ CMQ, PMI CAPM or PMI PMP certification examination. Students who sign up for these exams will receive extra credit for their final grade.

**BUS 503 PROJECT MANAGEMENT - AGILE APPROACH (3)**

*Prerequisites: None*

This course provides students with the knowledge and tools to manage projects using the agile project management framework. Students will learn topics such as developing the project vision, identifying user roles and stakeholders, chartering teams, planning releases, assigning value, and managing communication, quality, risk, and change. This course is designed to provide students with skills to manage all types of projects (e.g. software, and products). It is also applicable to project managers transitioning from traditional management environments to agile methodologies. The focus of this course is on the conceptual understanding that students need to know in order to successfully manage projects in a fast paced technical environment.

**BUS 504 CONTRACT MANAGEMENT & FINANCIAL**
This is a practical course about designing contracts and analyzing the project budget related to milestones achievement and deliverables scheduling. Students will learn about the project scope and implementation phases that are needed to design the required activities and charter agreement. In addition, they will learn about the Project/Program Evaluation and Review Technique (PERT), Planned Value (PV), Earned Value (EV), Actual Cost (AC), Budget At Completion (BAC), Estimate To Complete (ETC), Estimate At Completion (EAC), and Variance At Completion (VAC).

**BUS 509 LEADING AND MANAGING CHANGE (3)**  
**Prerequisites: None**  
This class will focus on individual, team, and organizational leadership and will provide students with the foundation for exploring and developing their own individual leadership style. Major areas to discuss are leadership, values, ethics, and decision-making. Change and a leader’s goal is to continually improve and look forward and provide the positive changes for the organization; being the visionary is critical to success in any organization and a key attribute for any organizational leader.

**BUS 510 REGULATION, GOVERNANCE, ETHICAL AND SOCIAL RESPONSIBILITY (3)**  
**Prerequisites: None**  
The overall goal of this course is to better prepare students to become responsible business leaders. In this class, students explore the relationship between business and society, and argue that to create a business that will endure and be managed any organizational leader.

**BUS 516 PRINCIPLES OF QUALITY MANAGEMENT (3)**  
**Prerequisites: None**  
This course covers the philosophy and concepts of quality management with an emphasis on tools and techniques of quality management for continual improvement in quality and productivity. Students learn techniques to improve organization performance and competitiveness.

**BUS 517 - ORGANIZATIONAL CULTURE AND DIVERSITY (3)**  
**Prerequisites: None**  
As organizations become increasingly diverse, the importance of understanding diversity, and its influences in the organizational culture become more essential. This course offers students a thorough understanding of diversity, beyond cultural diversity. Students planning to be managers and leaders of global organizations will learn in this course how to build and implement broad organizational diversity plans. In addition, students will become aware of the legal and ethical effects of building diverse initiatives and of the factors that build an effective organizational culture.

**BUS 518 APPLIED STATISTICS (3)**  
**Prerequisites: None**  
The course covers topics from both introductory and advanced level courses in statistics with the purpose of preparing students for classes in Business Analytics and Data Mining, and also for students who expect to be using statistics for their research. The course is designed to cover foundation topics in the first one-third of the classes, and classical multivariate statistical methods in the second two-thirds. The introductory part cover topics as: probability theory, distributions on different types of random variables, sampling and sampling distributions, hypothesis testing, statistical inferences, one and two-sample procedures, assessing goodness of fit, analysis of variance, linear least squares, correlation and regression, sample size, analysis of variance, and non-parametric statistics. The topics covered in the latter 2/3 of the course are classical multivariate methods and cover topics as: multivariate normality, comparison of multivariate means, matrix algebra, principal component analysis, discrimination and classification, linear multivariate regression, analysis of co-variance, canonical correlation.

Optional topics are support vector machines, and model evaluation and selection. Also, Bayesian statistics is of interest for its widespread use. Upon completion of this course, the students are expected to demonstrate an understanding of the principles of probability theory in classical multivariate statistical analyses, and should be able to think critically about data and models, and to draw conclusions from such analyses.

**BUS 520 - EMERGING TECHNOLOGIES FOR PRODUCT DEVELOPMENT (3)**  
**Prerequisites: None**  
This course discusses emerging technologies in the area of product development. Ongoing economic constraints, declining margins, volatile supply chains and other market factors have been instrumental in hastening the adoption of technologies in industries seeking sustained competitive advantages. Concepts discussed in the context of product development are critical thinking for problem definition, resource utilization, optimization and allocation, managing variability in development work, understanding and managing economic performance measures, capacity management, quality management and harnessing people and technology for successful product development. Emerging technologies range from innovations in ERP systems, Internet of Things, Virtual Reality, 3D Printing, and the use of Artificial Intelligence for product design and technical specifications. Lastly, Big Data Analytics will be briefly discussed in relation to creating customized product solutions and reinventing the value chain in the quest for ongoing competitive advantage.

**BUS 521 – MANAGEMENT OF TECHNOLOGY AND INNOVATION (3)**  
**Prerequisites: None**  
Technology and Innovation are the two pillars of the world we live in. This course will teach students about managing both technology and innovation for sustained competitive advantage and value creation. Through understanding the interconnected nature of technology and innovation, students will understand the impacts of well-managed technology and innovations on other allied concepts such as
wealth creation, social and human capital, and knowledge management among others. Lastly, and importantly, this course aims to provide students tools to manage technology and innovation beyond conventional methods using case studies and other strategic frameworks.

**BUS 600 RESEARCH METHODS (3)**
Prerequisites: None
This course introduces students to research methodology with focus on statistical techniques and the interpretation of results. Students will be provided with the foundation to understand and apply research methods via class lectures and hands-on practice. Students will perform literature search and review, create a working research model and hypotheses, compile a questionnaire, use multivariate statistics to analyze data, and form conclusions based on the results.

**BUS 688 SPECIAL TOPICS (1-3)**
Prerequisites: None
This course offers a relatively new subject that is not currently available in the catalog, but will be of great relevance to Business Administration. It consists of lectures, readings, homework, presentations and projects determined by the instructor.

**BUS 689 INDEPENDENT STUDY (1-3)**
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

**BUS 690 Strategic Management and Business Policy (3)**
Prerequisites: MGT 503, FIN 534, MIS 532, MKT 551, BUA 505 and MGT 578 or equivalent
This course is an overview of the important aspects of business policy and strategic management. The aim is to explain strategic organizational vision, discuss strategic problems and find solutions, which contain application and procedures of measurable evaluations. Students will learn to use quantitative tools to react to, and predict change, and to think strategically by studying a real world model of the management process. In addition, topics related to relationships between business ethics and strategic management are presented.

This is a capstone course. Topics include case studies on design, creation and application of strategies at different stages of the organization. Reflection on the organizations' control, on their role concerning stakeholders, investors and business environment is included.

Students will need the learning from all core business courses. Strategic Management techniques are a crucial part of the learning in this course in order to chart the future path of organizations. Students are responsible to make strategic decisions based on a review of existing business policy, and they are strongly encouraged to create, or suggest new policies to implement their strategic vision, and to justify them through oral and written communication.

**CFL (CLASSROOM FIELD LEARNING)**

**CFL 591 INTEGRATING ACADEMIC & INTERNSHIP**

**LEARNING (2)**
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591(can be taken concurrently) in order to be eligible to enroll in INT 593.

**DBUS (DOCTOR OF BUSINESS)**

**DBUS 700 BEHAVIORAL MARKETING, DIGITIZATION, AND DECISION MAKING (3)**
Prerequisites: None
This course deals with the understanding of consumer behavior, and consequent organizational decision-making as a result of engagement with target markets in the digital world. Digitization has revolutionized customer engagement strategies. Further, social media is fast emerging as a tool to understand, reach, and retain consumers. In this course, students can expect to learn about marketing decision making through consumer behavior analytics, search engine optimization, social media marketing, 3D Printing and its implications for the marketing function.

**DBUS 701 Innovation in Business Transformation and Entrepreneurship (3)**
Prerequisites: Admission to the DBA program.
This innovative course seeks to equip students with the strategies to transform organizations and entrepreneurial ventures to compete in the emerging global context. The course elaborates on innovation through three pivotal foci – processes, technologies, and people. Key concepts covered in this course include innovating business models, breaking down traditional silos, and developing tools for predictive decision-making. Applying the Silicon Valley entrepreneurial approach to design driven innovation, this course will address venture capital management, strategic leadership, and change and knowledge management.

**DBUS 710 SPECIAL INTEREST SEMINARS AND/OR CONFERENCES (0)**
Prerequisites: None
Attending seminars and/or conferences in the special interest research areas is vital for doctoral students in the program. In this course, students get to network with peers and experts in the areas of their research interest, gain innovative direction for their doctoral capstone, gain traction for future publication, data collection, and much more. As part of their doctoral study, students are encouraged to attend at least four (4) seminars and/or conferences in their area of research, and use their learning to build their comprehensive candidacy portfolio (CCP).

It is the students’ responsibility to accurately document their attendances and learning materials from these seminars and/or conferences, and to upload these to ITU’s educational management system, EMS.

**DBUS 711 CCP PANEL PRESENTATION I (0)**
Prerequisites: None
This panel presentation is the first in a series of three CCP
Panel Presentations. The presentations are aimed at gauging the doctoral student’s progress towards their academic and professional goals at critical milestones in their degree.

The main focus of the CCP courses is to include students’ work experiences in depth, as well as demonstrate competencies, and strengths in their specialization. Students must include in their portfolio for this course, a statement of their work experiences, and its alignment to their area of research, with a brief summary of the literature of their chosen CE. In addition, students must include a summary of conferences, and seminars that have contributed to their area of research interest.

Students are required to work on any feedback from their committee in order to progress to CCP Panel Presentation II. They are required to submit all materials related to this presentation on ITU’s educational management system, EMS.

DBUS 804 DATA ANALYTICS I (3)
Prerequisites: None
Analysis of data is an important element of Business decision-making. The aim of the course is to prepare the students to lead in analytics-driven organizations. The course will equip the students with the competences and challenges of data-driven in business decision making. Data analytics techniques, such as, predictive analytics, data manipulation, decisions under uncertainty, and decision analytics tools will be covered. The course will help the students to understand the process of observing the data to draw conclusions, which are probable by using current tools such as Tableau, SAS, MS Power Business Intelligence(BI), Hadoop, and Excel, among others.

DBUS 805 DATA ANALYTICS II (3)
Prerequisites: DBUS 804
The course will enable students to understand the data driven decision making within the context of strategic innovation. Together with Quantitative, and Qualitative Research Analysis, students will learn to interpret, manage and disseminate complex business data. Most importantly, students will understand how to use data as a strategic lever to drive innovation in organizations. Key topics covered include statistical modeling methods, business intelligence, data warehousing, and data mining.

DBUS 806 PEREGRINE APA WRITE & CITE (0)
Prerequisites: None
Academic writing is a key competency for doctoral students. This is an online, interactive, eight (8)-module course, provided by external experts, Peregrine Academic Services to help students prepare and succeed in writing their doctoral capstones. Students will learn to write, format, and correctly cite academic work. This course will also specifically empower students to define their research problem, find legitimate sources, and create doctoral capstones that are publication worthy. Students are required to take the pre-course test, as well as a competency exam on completion of the course.

Students are required to take this course in the first trimester of the DBA program. There is a cost of $49, to be paid to Peregrine Academic Services at the time of registration in this course. Students are also required to upload on ITU’s educational management system, EMS, evidence of passing this course.

DBUS 810 FINANCIAL ENGINEERING AND INNOVATION (3)
Prerequisites: None
This cutting edge course draws from multiple disciplines such as mathematics, financial theory, engineering, and programming to the practice of finance, asset management, and portfolio management. A key outcome of this course is to apply financial engineering techniques to drive innovations in finance by developing new financial products. Topics examined in this course are portfolio optimization, prediction, estimation, risk analysis, and financial innovation.
DBUS 811 INNOVATION AND DIGITIZATION (3)
Prerequisites: None
This distinctive course focuses on various managerial, technological, and economic factors that drive digital revolution. This course goes beyond creating products and services for the digital world by addressing the need for continued organizational innovation, leading and implementing innovation, strategic R&D, and principles of digital transformation, among others.

DBUS 812 STRATEGY FOR DISRUPTIVE INNOVATION (3)
Prerequisites: None
This course deals with the pursuit of competitive advantage in a market that is constantly faced with myriad threats. Here, students will be equipped to analyze business trends all over the world, and identify risks, threats, and opportunities while implementing and managing disruptive innovation. Last, but not least, students will understand the role of disruptive innovation as an integral part of modern corporate strategy.

DBUS 813 CCP PANEL PRESENTATION II (0)
Prerequisites: DBUS 711
This panel presentation is the second in a series of three CCP Panel Presentations. The presentations are aimed at gauging the doctoral student’s progress towards their academic and professional goals after significant parts of coursework has been completed towards the degree.

The main focus of the CCP courses is the students’ work experiences, students must include a statement of advanced input from their work experiences, and demonstrate significant progress on their literature review related to their chosen CE. They must also include a summary of how their coursework till date has influenced their topic of choice.

Students are required to work on any feedback from their committee in order to progress to the final CCP Panel Presentation. They are required to submit all materials related to this presentation on ITU’s educational management system, EMS. Upon successful completion of this final presentation, students will progress towards completing their doctoral capstone.

DBUS 820 THEORETICAL FRAMEWORKS IN STRATEGY RESEARCH (3)
Prerequisites: None
A vital goal for all doctoral students is to further business research, and practice, either through creation of new thoughts, and/or through challenging existing theories. This course will enable students to demonstrate a thoughtful consideration of the theoretical constructs that underpin their unique areas of doctoral research. Students integrate learning from the core courses in this program to learn about research logic, the differences between theoretical and empirical paradigms, and types of research methodologies, sampling methods, and data collection. In addition, scholarly research, and specific doctoral writing techniques for publication will be introduced to prepare students for success in their chosen doctoral capstone.

DBUS 821 CONSTRUCTING RESEARCH DESIGN (3)
Prerequisites: DBUS 820
This course facilitates students’ creation of their doctoral research. Framing the research question, Development and testing of hypotheses, research strategy, Pros and Cons of using certain research designs, Measurement of constructs, Publication, and Empirical research will be the key tenets of this course. The ethical implications of choosing certain research designs will also be explored.

DBUS 822 CCP FINAL PANEL PRESENTATION (0)
Prerequisites: DBUS 813
This is the final presentation in a series of three CCP Panel Presentations. At this stage, students will have already completed most of their doctoral coursework, and based on their research thus far, they will also be ready to present their final comprehensive candidacy portfolio (CCP).

As previously noted in DBUS 711, and DBUS 813, the main focus of the CCP courses is to build the students’ portfolio based mainly on their work experience and its alignment with their chosen CE. Students must therefore, be prepared to present to the committee about their work experiences, intended topic of research, and their position on their chosen topic, their intended doctoral capstone, the literature review, and research done on their intended topic till date.

Students are required to submit all materials related to this presentation on ITU’s educational management system, EMS. Upon successful completion of this final presentation, students will progress towards completing their doctoral capstone.

DBUS 901 DOCTORAL CAPSTONE RESEARCH (9)*
Prerequisites: DBUS 822 and completion of all course work
This doctoral capstone research is a traditional dissertation. Students work closely with their advisor, conduct their research, and develop their dissertation, achieving the highest levels of scholarship. The dissertation must include original research that is focused either on expanding the methodological scope of the content area, developing new theories, or confirming theoretic models. Research methods that may be employed include field experiments, surveys, and case studies.

* This doctoral capstone course consists of three (3) sections. The course requires a successful presentation of the doctoral capstone proposal, and a successful defense of the final doctoral capstone.

DBUS 902 DOCTORAL CAPSTONE PROJECT (9)*
Prerequisites: DBUS 822 and completion of all course work
Through this doctoral capstone, students will perform specific doctoral research aimed at developing innovative and strategic solutions to organizational problems in the real world. The final capstone project report is equal to a traditional dissertation in terms of academic rigor. Students are encouraged to work with an academic advisor with strong industry experience or an industry expert (mentor) to develop a real life topic identified within a particular organizational context. This capstone course may be developed from students’ real work. In addition to a final capstone project report, deliverables could include a product, an application, and others.

* This doctoral capstone course consists of three (3) sections.
The course requires a successful presentation of the doctoral capstone proposal, and a successful defense of the final doctoral capstone.

**DBUS 903 DOCTORAL CAPSTONE PUBLISHABLE PAPERS (9)**

*Prerequisites: DBUS 822 and completion of all coursework*

This capstone requires doctoral students to write three (3) separate publishable papers, on a single or related theme. Students are encouraged to publish these papers in a peer reviewed or refereed journal. The doctoral capstone consisting of three (3) publishable papers is also equal to a traditional doctoral dissertation in terms of academic rigor, quality of research, and presentation of key information.

* Each doctoral capstone course consists of three (3) sections. The course requires a successful presentation of the doctoral capstone proposal, and a successful defense of the final doctoral capstone.

**ERP (ENTERPRISE RESOURCE PLANNING)**

**ERP 509 INTRODUCTION TO ERP SYSTEMS USING SAP (3)**

ITU/SAP University Alliance

*Prerequisites: None*

Introduction to ERP using SAP is prerequisite course for students who want to pursue other ERP courses. This course is designed for students to get a basic understanding of all the functional departments that exist in a business scenario. It gives an idea about how these functional departments work and how they are integrated in ERP systems to avoid duplication of work, and to provide efficiency and effective use of resources. This course is a general overview of the SAP ERP System concepts and tools. It introduces SAP as one of the ERP systems and explains how the fundamental business processes interact in SAP ERP in the functional areas of Sales and Distribution, Materials Management, Production Planning, Financial Accounting, Controlling, Human Capital Management, Project Systems, and Enterprise Asset Management. The course is presented in lecture format with open discussion and hands-on problem solving exercises.

**ERP 510 ABAP - ADVANCED BUSINESS APPLICATION PROGRAMMING (3)**

ITU/SAP University Alliance

*Prerequisites: None*

ABAP is the language for programming SAP’s Web Application Server, part of SAP’s NetWeaver platform for building business applications. This course introduces the ABAP language environment, including the syntax checking, code generation and runtime system, and various features of ABAP Programming. Though this course starts from basics it’s useful if students have basic programming knowledge with object oriented concepts and knowledge of relational database design. Students will get hands-on experience with scenarios, which will be discussed and worked on, in class on SAP system. Students will be given programming tasks to work on.

**ERP 511 ENTERPRISE PORTAL TECHNOLOGY USING NETWEAVER (3)**

ITU/SAP University Alliance

*Prerequisites: None*

SAP NetWeaver is SAP’s integrated technology platform and is the technical foundation for all SAP applications since the SAP Business Suite. SAP NetWeaver is marketed as a service-oriented application and integration platform. SAP NetWeaver provides the development and runtime environment for SAP applications and can be used for custom development and integration with other applications and systems.

**ERP 512 ENTERPRISE PROCUREMENT PROCESSES (MM) (3)**

ITU/SAP University Alliance

*Prerequisites: None*

Today’s enterprises face increasingly complex procurement processes. This course introduces the external procurement process. During the course, the students go through the entire procurement process with its typical steps – purchase requisition, purchase order, goods receipt, and entry of incoming invoice and payment. The students get to work on SAP course will quickly build through each of these concepts using Fitter Snacker case study or Quazi case study and configuration so that by the final day of class, each student will have hands on configuration experience in procurement processes. In doing so, the students will focus on different aspects and become acquainted with additional functions.

**FIN (FINANCE)**

**FIN 515 MANAGERIAL FINANCE (3)**

*Prerequisites: None*

The course teaches the students financial concepts and tools necessary for effective business planning. Topics include formation of interest rates, income taxes, working capital management, cost of capital, financial forecasting, external sources of capital, company valuation, and bankruptcy.

**FIN 516 ENTREPRENEURIAL FINANCE (3)**

*Prerequisites: None*

This course approaches the topic of entrepreneurial finance from a startup or early stage business owner’s perspective. The course assumes that the student has a modest or no background in finance, accounting, or economics. The classroom discussions together with the textbook are used to develop a foundation for understanding the practice of
This course offers the basics of investment management. We work together to create a basic understanding of the financial concepts, statements, and tools, as well as financial planning required to start a business or advance an early stage company. The financial plan explores the uses of financial analytics and integrating financial proforma statements with the business plan. The course learning process includes examining the roles of capital and its sources for startups and early stage companies; reviewing financing alternatives such as debt, equity, and credit as sources of working capital for entrepreneurs; and exploring other innovative techniques for financing a new venture. Implicit in these areas are the topics of mastering the concepts of revenue generation, operational costs, profitability, and cash flow. Students will explore a variety of financial analytical concepts such as ratios, time value of money, and capital budgeting to assist us with our entrepreneurial financial planning and decision making. The course concludes with a discussion on structuring financial liquidity events for investors.

FIN 517 FINANCIAL INSTITUTIONS (3)
Prerequisites: None
In the Fall of 2007, the US and other international financial markets experienced a major crash proceeded by record stock market highs. In this course students examine the products, markets policies, investment products, and financial institutions that precipitated this global event. Students will draw on a combination of finance research journals, Internet articles, as well as other international finance textbooks to further supplement our understanding of the Finance Markets and Institutions. Our course utilizes several contemporary journal publications to build a rich discussion on the topics of financial markets and institutions, as well as financial objectives and strategies impact on international business expansion.

FIN 518 FINANCIAL AND SOCIALLY RESPONSIBLE INVESTING (3)
Prerequisites: None
Socially responsible investing is a course that examines one of the fastest growing areas in the global financial markets. The global financial crisis of the 2000s have shown that socially responsible investments (SRIs) have a place in building financially sound investment portfolios while doing social good. The course utilizes financial and global macroeconomics to support developing the basic investment mechanics and strategies. The initial objective of this course is to develop students’ qualitative and quantitative skills for understanding the basic principles of socially responsible investing.

FIN 519 CORPORATE VALUATION (3)
Prerequisites: None
The focus of this class is on making investment decisions in real (as opposed to financial) assets. It will acquaint the student with the widely used ideas that have revolutionized the practice of valuation during the past few decades. By the end of the course, students should be comfortable in answering the question: What is a real asset - a new product, a new project, a division, or a company - worth?

FIN 520 INVESTMENT MANAGEMENT (3)
Prerequisites: None
This course offers the basics of investment management.

FIN 521 INTERNATIONAL FINANCIAL MANAGEMENT (3)
Prerequisites: None
This course provides students with the framework for making corporate financial decisions in an international environment. Topic include: measurement of currency exposure and of currency risk. In addition, topics about the decision to undertake a global financing program, exchange and capital market, capital budgeting analysis for foreign direct investment, and the value of target firms for cross-border acquisitions are discussed. The course will examine different aspects of the foreign exchange market, the role of governments, and the central banks. The main focus is on the markets for spot exchange, currency forwards, options, swaps, international bonds, and international equities. Multinational financial transactions create unique challenges due to the market complexity, the exchange rate, and the political risks.

FIN 522 BEHAVIORAL FINANCE (3)
Prerequisites: None
The theories of finance and investment have focused on financial tools to characterize and quantify wealth creation and its associated risks. These tools have assisted investors to compute asset price and make investment decisions. In this course, we study the psychological influences of investor behaviors. Students examine the behavioral biases that people have when making purchasing, budgeting, or investing decisions. The class will also discuss Dual Motive Theory in terms of Ego/Empathy and greed/positive financial impact to understand how brain functions can impact financial behavior and relationships.

FIN 523 MACROECONOMIC THEORY (3)
Prerequisites: None
This course discusses basic principles and theories of macroeconomics, and components and measurement of production, income, and other key economic variables of the U.S. domestic economy. The course focuses on the analysis of the interrelationship among leading, lagging, and coincident indicators; key economic variables; and fiscal and monetary policy within the framework of the business cycle. Students will practice using publicly available economic data and conduct analyses of the state of the economy, forming an educated guess about its future direction, and applying that knowledge for decision-making in the context of their particular business activity.

FIN 525 ECONOMETRICS (3)
Prerequisites: None
This course covers concepts of econometrics and their practical applications for business and economics. From single and multivariable models under classical assumptions,
the course moves on to study models that exhibit the
problems of multicollinearity, heteroscedasticity, and
autocorrelation. In addition, specification errors, and
identification problems in single equations and in
simultaneous equation systems are also studied. Students
will learn how to use an econometric software package to
run models to simulate and solve practical problems in the
field of business and economics.

FIN 526 INTERNATIONAL ECONOMICS (3)
Prerequisites: None
This course examines basic principles and theories of
international economics (the standard trade model and the
Heckscher-Ohlin theory); international trade policies (tariff
and non-tariff barriers); balance of payments, foreign
exchange markets, and exchange rate determination; and
the relationship between exchange rates, current accounts,
and the economy as a whole, including fiscal and monetary
policies in an open-economy.

FIN 534 FINANCIAL AND ECONOMIC ANALYSIS (3)
Prerequisites: None
This course discusses criteria and methods to evaluate the
net benefits of investments projects and, once selected for
implementation, the best way for a firm to fund and
implement such projects, in a way that cash flow is
optimized. The course explores the following topics:
financial ratios and financial statements, measures of
investment risks, models of asset returns, valuation of
derivative securities, valuation techniques using time value
of money tools, analysis of how capital inflows affect
emerging market economies, evaluating and selecting
investment in long-term assets, determination of financial
mix (capital structure) to fund long-term investments, short-
term financial planning, working capital management, short-
term cash flow planning and forecast, and microeconomic
and macroeconomic topics relevant to financial
management.

FIN 604 SECURITIES ANALYSIS (3)
Prerequisites: FIN 515, or basic knowledge of finance
Security Analysis is about understanding the characteristics of
and influences on financial securities, as well as making
investment decisions. This course draws on the work of Berk &
DeMarzo (2007), Copeland, Shastri, & Weston (2010), Fabozzi,
and Modigliani & Jones (2010) to explain, validate, and build on
the early theoretical securities pricing work of Bronzin (1907)
and Bachelier (1914). This foundation is augmented by the
investment theories of Working (1934), Kendall (1953), Osborne
(1959, 1962), Markowitz (1952), Fisher (1907, 1930), Keynes
(1920) et al. in asset pricing and valuation; as they have played
important roles in the development of modern theories in
securities analysis. The class knowledge base is brought up to
date with the debates regarding CAPM, APT, and other asset
pricing and analytical models.

FIN 605 FINANCIAL DERIVATIVES AND RISK
MANAGEMENT (3)
Prerequisites: FIN 515, or basic knowledge of finance
Derivatives provide users an opportunity to mitigate risk, as
well as increase financial returns. They also have a dark side
where they can be prone to misuse and abuse. Derivative
theory and risk management offers us a framework,
together with a set of analytical techniques, for
characterizing risks and determining the valuation of an
asset, investment, and opportunity. The objective of this
course is to become familiar with the basic building blocks of
derivatives: forward contracts, future contracts, options,
and swaps. Students build on this foundation with the
creation of derivative strategies and risk management
techniques. Students develop asset including option pricing
models from a variety of financial theorists.

FIN 606 CORPORATE FINANCE (3)
Prerequisites: FIN 515, or basic knowledge of finance
Corporate Finance brings together the academic rigor and
practitioner perspectives on making business and economic
decisions. The course will draw on a combination of finance
research journals, Internet articles, and other finance
publications to supplement the understanding of the
discipline. The course utilizes several contemporary
publications to build a rich discussion on the topics of
finance, as well as how to develop financial objectives. Class
time will provide the opportunity for collaborative
discussions, exchanges of the impact of Finance on business
concepts and globalization opportunities, and the interactive
use of finance applications, models, and analytical tools.

FIN 607 MERGERS AND ACQUISITIONS (3)
Prerequisites: FIN 515, or basic knowledge of finance
M&A are a powerful tool for building competitive
advantage. In a global marketplace it offers strategic
advantages for business expansion relative to corporate
assets, products, technology & IP, as well as marketing
distribution channels among other financial benefits. In this
course we develop skills for the obligatory financial
analysis of M&As. Students examine a full range of business
dynamics and strategy considerations regarding M&As and
reach beyond analysis to the synthesis of M&A issues to
develop a framework for successful M&A planning,
implementation, and post M&A activities.

HCM (HEALTH CARE MANAGEMENT)
HCM 509 – SCIENTIFIC WRITING AND RESEARCH FOR
HEALTHCARE (3)
Prerequisites: None
Through this course, students will become aware of medical
language and standard medical terms used in medical journals,
grant applications and others. The course enables students to
be on par with other medical professionals through their
written communication. Topics discussed in this course are
healthcare related documentation, access to healthcare
journals and databases for research purposes.

HCM 510 A REGULATORY OVERVIEW & COMPLIANCE
(3)
Prerequisites: Any Biology background: Academic or
Professional
This course will offer a summary of the drug development
procedure. The emphasis will be on drug development
science, regulation, and business from the U.S. standpoint.
Most the lectures will be a concise educational outline of
today’s subject, followed by dialogue of a main scientific
publication that highlights the significant theories covered.
HCM 511 CONCEPTS TO HEALTHCARE MANAGEMENT (3)
Prerequisites: None
This course provides a dynamic introduction to the health sector. In addition it provides an overview of concepts and issues related to healthcare leadership. While the emphasis will be on the American system, a global context will be developed. The basic elements of insurance and payment, service delivery, and life sciences products will be described, and put in the context of the unique economic structure of the sector. The intense challenges of the sector will be explored, as well as both the ethical issues presented and the opportunities that emerge. Through the examination of management topics and healthcare situations, the student will explore the skills and knowledge needed to be successful in a diverse healthcare environment. Topics include organizational design as it relates to the uniqueness of healthcare organizations, managing professionals, and diversity in the workplace. Public policy and technological and practice development as drivers of change will be also addressed.

HCM 513 INNOVATING BIOMEDICAL TECHNOLOGY (3)
Prerequisites: None
This course is recommended for students who are entrepreneurially inclined and would like to develop products and services for biomedical application. It is highly recommended for students with EE or CE majors. They will learn the medical device/application market trends and regulations for product development. The course is designed to provide students with entrepreneurial spirit to get hands-on experience in developing knowledge, kindling innovative thinking and designing products in the bioscience/biomedical arena. Working in groups or teams, students will learn to research market trends, gap analysis and market needs to develop a concept or design a product. They will also learn to research Intellectual Property and patent databases to further develop their concept and avoid IP infringement pitfalls that are bound to arise.

HCM 515 HEALTH INFORMATION TECHNOLOGY (3)
Prerequisites: None
In this course, students will experience a huge amalgamation of information drawn from geography, biology, sociology and economics. This information requires acquiring skills in these discipline and to have certain ethical and moral obligations to put this knowledge to use to derive something tangible for future generations. Biological management goes beyond the formal education in physics, chemistry or biology to understand the very essence of what it means to be inhabitants of the planet. The basic objective of this course is to create a new environmental awareness.

HCM 519 HEALTHCARE ETHICS (3)
Prerequisites: None
This course invites students to explore issues in medical ethics from a personal and professional career perspective. Materials will include case studies of actual situations encountered by healthcare administrators and providers in the United States. Emphasis will be on learning useful approaches and practical principles for decision-making. This course provides an overview of legal doctrine and critically assessing public policy issues. Duties assigned as per healthcare law such as the duty to treat, informed consent, and malpractice liability, and selected issues in bioethics such as the right to die, physician-assisted suicide, and organ transplantation are dealt in detail. Importance of financing and delivery issues such as insurance coverage and care towards patient are studied.

HCM 520 HEALTHCARE LEADERSHIP, PATIENT SAFETY AND QUALITY IMPROVEMENT (3)
Prerequisites: None
This course is designed to address patient safety and quality improvement challenges in providing quality healthcare. Drawing from actual case studies the course explores areas where patient safety is liable to be compromised and find solutions for improvements. With a complex and diverse background of patients and healthcare providers, communication and understanding culture issues is of paramount importance. The course will explore the need for effective communication and tools to meet this need. The course will follow various case studies in patient’s safety as a way to understand and analyze the underlying problems, possible flaws in the systems, designing and improving quality systems to deliver the highest patient safety possible. Case studies from various countries will be part of the course so the student can understand the international implication of quality systems.

HCM 525 PRINCIPLES OF MANAGED CARE (3)
Prerequisites: None
This course invites you to learn about the principles of managed healthcare systems in the United States. Topics covered include: health insurance, network contracting, provider payment, management of utilization and quality, and laws and regulations. Spot quizzes will identify learning transfer and possible gaps. Both interim midterms and a comprehensive exam will ensure overall paced learning. Special attention will be paid to the details of and latest news about the federal Patient Protection and Affordable Care Act of March 2010.

HCM 529 MENTAL HEALTH AND WELLBEING (3)
Prerequisites: None
This course invites students to explore issues in mental health and wellbeing from a personal and professional career perspective. Topics will include materials on support organizations (both local and online), self-care activities, and current important issues. Emphasis will be on learning useful approaches.

HCM 531 COMPLEMENTARY AND ALTERNATIVE MEDICINE (3)
Prerequisites: None
Modern medicine is evidence-based, scientifically rationalized, and follows a reductionist approach while many of the alternative medicines are not. However, there is an increasing body of scientific work related to the systematic study of alternative medicine in disease states. Students will investigate the research findings to understand, rationalize, and develop a higher order of thinking to how to benefit from the adoption of these practices and integrate them with modern medicine. Healthcare cost and health management can be more effective with the integration of
the old with the new, forging new paths for management of disease and developing new paradigms for a healthy life.

**HCM 534 FINANCIAL MANAGEMENT FOR HEALTHCARE ORGANIZATION (3)**  
*Prerequisites: Basic Knowledge of Financial and Managerial Accounting or equivalent*  
In this course, students will learn the basics of budgeting and accounting for health, and not-for-profit organizations. Readings, real-world case studies, and lectures will help students understand how to use financial information in organizational development, application, control, recording, and analysis. In addition, the course emphasizes on managerial accounting. Topics include time value of money, capital budgeting, cash budgets, operating budgets, break-even analysis, indirect cost allocation, variance analysis, and long-term financing.

The course also emphasizes on financial accounting. Topics include the preparation and analysis of financial statements (balance sheet, income statement, and cash flow statement), government accounting, and ethics in financial management.

Topics explain financial management of working capital and investment decision models, long-term capital structure and mergers and acquisitions of health care organizations. Course's contents will include cases about a range of health care organizations (hospitals, managed care, health centers, physician, home health organizations, etc.)

**HCM 535 DATA ANALYTICS APPLICATIONS IN HEALTHCARE (3)**  
*Prerequisites: None*  
This course focuses on application of data science and analytics techniques to concepts and problems in healthcare. Data analytics in general and in the context of healthcare in particular involves many steps including data generation, data extraction, data analysis, visualization and reporting. An overview of these data analytics stages will be provided as they apply to healthcare industry. A review of basic predictive analytics concepts such as statistical learning using regression techniques, classifiers and decision trees will be given. Application of these techniques to healthcare issues such as patient monitoring, preventive diagnosis, personalization of treatment for patients will be discussed. The students will learn and analyze the impact of data analytics in planning, process efficiency, and resource management in healthcare industry.

**HCM 536 High Reliability Health Care Organizations (3)**  
*Prerequisites: None*  
This course focuses on the art and science of leading for highly reliable performance in the modern healthcare industry. Students will learn how individuals can engage in efforts within and across organizations to ensure high reliability by studying case studies related to decision-making and team organization in various healthcare settings at the face of diversity. The course pays special attention to the cognitive and effective dimensions of leading in today's uncertain and dynamic healthcare environments, whether that means motivating a clinical care team, launching a new medical product, ensuring quality and payment coverage across a healthcare system, or coordinating patient access to health services.

**HCM 537 Commercializing Medical Devices, Diagnostics and Biomedical Innovations (3)**  
*Prerequisites: None*  
This course provides an overview of design control, methods and best practices governing the medical device industry. Electronic health application development and biomedical product as well as regulations and the practical application in the scope of marketing and commercialization. Students will learn through a cross-disciplinary approach, how to launch, and market a new device, a health app or a biomedical product including lifecycle management and intellectual property laws in the context of this industry.

**HCM 538 Predictive Analytics and Decision Models in Healthcare (3)**  
*Prerequisites: None*  
This course explains data-driven modeling methods and decision models to familiarize students with the field of predictive analytics application in the healthcare industry. Prior course work in business analytics and data visualization will add to this course, which builds on assessing data within the healthcare industry context, understanding data trends and risk assessment. Through this course, students will learn how to build reliable predictive models for developing effective decision models for business strategy and organizational competitive advantage in the healthcare industry. Case studies and problems will be provided in related areas such as launch of a new medical device, payment coverage and better service to healthcare products.

**HCM 539 HEALTH CARE MARKETING (3)**  
*Prerequisite: None*  
Health care marketing is the promotion of an organization's products or services to increase its value as well as the management process through which goods and services move from concept to the customer. In today’s environment, there are variety of challenges for many health care organizations due to complexity of the new technologies, competition, regulatory issues and approval process. This course will prepare you to think strategically about the fundamentals of marketing as they are applied across a broad spectrum of health care organizations and the role marketing plays in the strategic management of health care organizations. After successful completion of this course, you will be able to identify and address marketing opportunities with a strong foundation of marketing principals to develop a marketing plan for any health care organization.

**HCM 690 HEALTHCARE INNOVATION MANAGEMENT PROJECT (3)**  
*Prerequisites: MGT 503; Completion of 27 credit hours in the program*  
This course focuses on using the knowledge obtained throughout the healthcare management core and elective courses in implementing a comprehensive project. The nature of the project will be interdisciplinary and students with different background and skills are encouraged to participate in the project. The project is inspired from real-
life scenarios found in the healthcare management industry. The students will form a team that each will tackle different aspect of the project. An example of a project could be a medical device product development project that requires a market survey, business plan development, design specification document, cost and budgeting, manufacturing/implementation plan. The goal of this course is to expose students to real-life product cycle and provide hands-on experience with an industrial project while emphasizing development of soft skills such as teamwork in a classroom setting.

**HRM (HUMAN RESOURCE MANAGEMENT)**

**HRM 528 HUMAN RESOURCE MANAGEMENT (3)**

*Prerequisites: None*

This course examines the principles of human resource management, including recruiting, hiring, orienting, training, developing, disciplining, and rewarding employees. The course provides a management-oriented exploration of human resource management, structure, functional applications, and labor management relations. This course is a humanistic and legal analysis of organizations, focusing on the role of human resource management. There will be an examination of managers and leaders within organizations and their responsibility to maximize performance and make decisions based on ethical criteria. The class will also discuss Dual Motive Theory in terms of Ego/Empathy and ethical/unethical behavior to understand how brain functions can impact human behavior and relationships.

**HRM 529 EMPLOYEE TRAINING AND DEVELOPMENT (3)**

*Prerequisites: None*

This course reviews training, employee and organizational development techniques that the organizations use to build group and individual skills. Topics include linking identified needs to business objectives, developing an implementation plan, implementing the plan using a variety of modalities, and assessing results. The students will use a hands-on approach to evaluate organizational needs for employee development. The overarching objective of this course teaches students to assess, develop, facilitate, and evaluate a training program. We will also discuss Dual Motive Theory in terms of Ego/Emathy and self/other behavior to understand how brain functions can impact human behavior and relationships.

**HRM 530 EMPLOYMENT LAW FOR BUSINESS (3)**

*Prerequisites: None*

This course emphasizes federal employment statutes. Cases are used to illustrate the various federal courts’ interpretation. Federal agencies such as Equal Employment Commission and Department of Labor are studied. Topics on the employment law provide a comprehensive analysis of federal and state laws, which affect the human resource function, including equal employment opportunity, wage and overtime payment, and employment agreements. The course focuses on applying employment laws to develop programs that enable organizations to act positively in meeting both company and work force needs, trying to resolve workplace disputes, prevent litigation, and implement personnel policies and practices in conformity with applicable law.

**HRM 532 MANAGING HUMAN CAPITAL USING SAP HCM (3)**

*ITU/SAP University Alliance*

*Prerequisite: None*

As companies pursue competitive advantages, and seek higher productivity, innovation and profitability, it is imperative that they attract, retain and incentivize their biggest assets: people. This course revolves around appropriately managing “human capital” to attain organizational competitive advantage. Emerging issues surrounding human capital management such as recruiting, retaining, motivating, and incentivizing employees will be discussed. In addition, the challenges of building competitive advantage through effective human capital management will also be addressed from a strategic perspective. A multifaceted approach is adopted, reflecting the complexity of the environment and issues faced. Rather than prepare students to enter a career in HR, this course is aimed at intending managers and leaders who must factor in human capital as an invaluable source of competitive advantage. Other topics may include: Talent and workforce planning in a dynamic environment; building a positive human capital reputation for the organization; systems thinking; organizational change and organizational learning; dynamics of organizational culture, assessing human capital investments; linking corporate strategy and human capital management, and leveraging on emerging technologies.

Lastly, hands on cases and resources will take students through the key topics. Students will also be introduced to the use of the SAP Human Capital Management (HCM) module. This course is a foundation course for HRM 535: Human Resources and Information Technology using SAP. Students will earn some knowledge and credits towards relevant SAP HCM, and SHRM-CP, or SHRM-SCP certifications (depending on their work in the HR fields).

**Certification/award eligibility:**

This course can be used towards the following certificate/certification and award schemes:

1. ITU/SAP University Alliance Joint Recognition Award
2. SAP HCM (SAP Human Capital Management) certification (based on completion of exam directly with SAP)
3. SHRM-CP (Society for Human Research Management-Certified Professional), or SHRM-SCP (based on membership with the SHRM and fulfillment of eligibility criteria)

**HRM 533 STRATEGIC COMPENSATION: ISSUES AND OPPORTUNITIES (3)**

*Prerequisites: None*

This class addresses the need for strategically focused compensation systems aligned to the business objectives and examines the related factors that impact employee motivation and productivity in a variety of settings and industry sectors. The course will examine and analyze the various components of compensation systems in
foreign exchange market, exchange rate determination, and students understand the basics of international finance, the markets, banking, and capital markets. This course analyzes the international financial markets.

INB 554 INTERNATIONAL FINANCIAL MARKETS (3)
Prerequisites: None
This course analyzes the international financial markets. Topics include foreign currency, international money markets, banking, and capital markets. The course helps students understand the basics of international finance, the foreign exchange market, exchange rate determination, and currency derivatives. The foundation of understanding foreign exchange management, the world financial markets and institutions will be covered.

INB 556 GLOBAL STRATEGIC MANAGEMENT (3)
Prerequisites: None
This course examines the fact of globalization, and how managers in multinational firms struggle with a complex and rapidly changing international economic environment. The course introduces the business skills of understanding and managing strategic issues in international environment. It will also focus the understanding of the need for awareness of a change in organizations’ internal and external environments.

INB 558 GLOBAL MARKETING AND STRATEGY (3)
Prerequisites: None
This course is an introductory survey of global marketing. Students will learn the mechanism of the decision-making process, and challenges of going global. The culture, legal, political, geographic, technological, and economic influences will be examined in the development of a comprehensive global marketing strategy. The student will gain a perspective of the trade operations mechanism and develop skills that will enhance their participation in a global economy.

INT (INTERNSHIP)
INT 593 PART-TIME/FULL-TIME INTERNSHIP (1, 3)
Prerequisites: CFL 591, can be taken concurrently
This course consists of participation in a full-time or part-time internship experience, related to the student’s field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A maximum of 10 credit hours earned in INT 593 may be applied toward the Master’s Degree graduation requirements.

MBN (MASTER OF BUSINESS ADMINISTRATION, CAPSTONE THESIS)
MBN 697 MBA THESIS (3)
Prerequisites: MGT 503; Completion of 27 credit hours in the program
Students should select a topic and work with an advisor to complete their thesis paper. The thesis concludes the program and should be taken after all other courses. The students will prepare an independent thesis and defend it before a committee composed of a number of faculty designated by the chair of the MBA program.

MGT (MANAGEMENT)
MGT 503 ORGANIZATIONAL LEADERSHIP THEORIES (3)
Prerequisites: None
The course will provide an in-depth examination of organizational leadership. This course will explain the principles, strategies and elements of effective organizational leadership. Leadership theories are examined in the context of contemporary, global and matrix organizational environments. Students will get the essential
knowledge and skills to be efficient in these varied organizational contexts. Students will build an understanding of the work of organizations and the leaders’ roles at all levels to enhance organizational performance. In addition, the course will discuss human behavior in organizations, the role of leaders as they move from strategic to tactical implementation, and leading organizational change.

**MGT 560 PRINCIPLES OF MANAGEMENT (3)**
**Prerequisites: None**
This course features traditional management principles such as planning, managing, leading and controlling. Two textbooks will be utilized during the semester: one for theory & practical tactics of management, and another for self and other-awareness of people principles of management. Students will read and discuss the two texts and engage in classroom activities and business writing. There will be individual and group written essay, and oral presentation assignments. The class will include a review of Dual Motive Theory, understanding how brain functions of ego and empathy can impact behavior and relationships.

**MGT 561 COACHING – CHANGING LIVES, CHANGING ORGANIZATIONS (3)**
**Prerequisites: None**
This course is designed to survey the field of coaching from a theoretical, ethical and practical point of view. Students will explore various coaching methodologies and disciplines. The benefits of coaching and how to select a coach for individuals and organizations will be explored. Coaching skills will be taught and practiced, as well as experienced.

**MGT 564 PRINCIPLES OF PUBLIC RELATIONS (3)**
**Prerequisites: None**
This course invites students to learn the language of the field of public relations. Also, students will learn to distinguish between the field of public relations and its related fields: marketing, advertising, public affairs, publicity, and propaganda. Students will compile actual research data about a hypothetical public relations campaign. Students will apply basic public relations principles to case studies. For the final exam, students will deliver effective public relations presentations. Students must come to class with their computers. Students should submit their resumes to the ITU EMS (ems.itu.edu) before the first class.

**MGT 566 PRODUCTION AND OPERATIONS MANAGEMENT (3)**
**Prerequisites: None**
This course will help students to understand theories, problems and methods applicable to the operations of various business organizations. The focus is on decision making in operational areas such as: facility conditions and use, control and manage resource inputs and outputs, types of transformation procedures, and performance evaluations. This course is relevant to people interested in designing and managing production and business processes, and those who manage interfaces between operations and the other business functions. The body of knowledge encompassed in this course will provide the basis for linking corporate strategy to its production and operations management.

**MGT 567 QUALITY CONTROL MANAGEMENT (3)**
**Prerequisites: None**
This course focuses on the understanding of effective quality management. It provides the basic quality concepts and the benefits of a quality approach for an organization. It addresses teamwork by explaining the various team types, the roles and responsibilities of their members and the team-building dynamics. The basic quality and quality management tools are described in the context of problem solving and data analysis for continuous quality improvement. The course discusses various statistical concepts and tools, and how they are applied for process monitoring, control, and improvement. It also analyzes the key elements of customer and supplier relationship and their impact on quality for the organization. The course follows the Body of Knowledge (BOK) for the Quality Process Analyst certification of the American Society for Quality (ASQ) and prepares for the certification examination.

**MGT 569 STRATEGIC OPERATIONS MANAGEMENT (3)**
**Prerequisites: None**
This course provides an overview of Strategic Operations Management with emphasis on the four core themes of operations strategy, a vital topic for any company’s objectives: strategy, innovation, services, and supply. We will cover the intrinsic and extrinsic factors within an organization’s operations, including the input of: Capital, Technology, Energy, and Know-how; and the output of the final product/service for the customer. It will also cover the big picture of Strategic Operations including; supply management, innovation, sustainability, and human resources. Additionally, this course will cover managing strategic operations within organizations including; managing the transformation process, managing quality, managing inventory, capacity and scheduling management, and managing service operations.

**MGT 571 CRITICAL THINKING STRATEGIES IN DECISION MAKING (3)**
**Prerequisites: None**
This course provides students opportunities for analysis, synthesis, prescription, and application of critical thinking and decision making within the organization. Emphasis is placed on preparing managers who can deal clearly, rationally, and creatively with a diverse workforce and dynamic workplace. This course equips students with concrete skills in critical thinking and decision making that will allow them to identify and solve organizational problems, as well as provide strategic direction. This course will also discuss Dual Motive Theory in terms of Ego/Empathy and ethical/unethical behavior to understand how brain functions can impact human behavior and relationships.

**MGT 572 HIGH-TECHNOLOGY ENTREPRENEURSHIP (3)**
**Prerequisites: None**
This course is offered for those planning to undertake an entrepreneurial career in starting and building an international company in the high-technology area. A special effort is made to take advantage of ITU’s proximity to the entrepreneurial community in Silicon Valley with its fundamental international business thrust. An integrative
business plan for a new company in the technology arena is an integral part of the course. Topics covered include: addressing new business opportunities, global trends, high technology, business model design, start ups, venture capital process and tools. This course will cover the basics of building a business plan to meet emerging needs. Concepts and techniques of social entrepreneurship will provide the foundation for learning and communicating.

MGT 573 INTERNATIONAL MANAGEMENT (3)
Prerequisites: None
This course studies the role of managers in global markets. Topics include the external economic and political environment, international strategic planning, partnerships, global human resource management, managing technology, product and service design, ethics and leadership. The course utilizes innovative techniques and case study analysis from a variety of national, and multinational firms.

MGT 575 PROJECT MANAGEMENT (3)
Prerequisites: None
This course provides an overview of project management history, culture, methodologies, leadership and strategic planning. The course introduces important tools, such as work breakdown structure, scheduling, earned value analysis, and risk management. Case studies from a variety of organizational settings are discussed. The course discusses the 5 processes that must be done for project success: Define, Organize, Execute, Control and Close. The strategic implications of projects will be considered with respect to the organizational vision. This course follows the Project Management Body of Knowledge (PMBOK) of the Project Management Institute (PMI) and prepares for the examinations for the Certified Associate in Project Management (CAPM) or the Project Management Professional (PMP) certifications. The course focuses on the concepts and tools of the different project management elements. It first sets the project management framework and describes the different steps in the project management process. Next, all the key management aspects of a project are addressed: integration, scope, time, cost, quality, human resources, communications, risk, procurement and stakeholder.

MGT 576 Organizational Theory (3)
Prerequisites: None
Organizational Behavior is the study of individual behavior and group dynamics in organizational settings. It focuses on timeless topics such as motivation, leadership and teamwork and more contemporary topics such as organizational citizenship behavior and transformational leadership. Few, if any of the dramatic challenges facing today's organizations can be handled effectively without a good understanding of human behavior as it is presented in organizational settings. One simplistic way of looking at this course is to view the organization from an internal level with the observation and interpretation of its members' behavior at an individual and group level, and then to look at organizations on an external level, as it interacts with the outer environment. The objectives of this course rest on the assumption that learning involves not only acquiring knowledge, but also developing skills. Thus, the class lectures, discussions, exercises, articles and cases present the opportunity for the student to acquire the concepts, ideas and theories that are important to any study of organizational behavior and to apply this knowledge to practical issues that enhance the explanation of human behavior at work. We will include a review of Dual Motive Theory, understanding how brain functions of ego and empathy can impact behavior and relationships.

MGT 577 PROJECT RISK MANAGEMENT (3)
Prerequisites: None
After a brief overview of the project management framework and processes, this course explains how risk management is integrated into the different knowledge areas of a project. The course then addresses the six elements of risk management: risk management planning, risk identification, qualitative risk analysis, quantitative risk analysis, risk response planning, and risk monitoring and control. In this context, the course explores the project management techniques and approaches to identify, and analyze the full range of project risks for successful project risk management outcomes. The various concepts and tools are illustrated by examples and case studies. This course will also emphasize the communication requirements that successful project managers use to manage risk and uncertainty.

MGT 578 BUSINESS COMMUNICATIONS (3)
Prerequisites: None
Communication is an essential component in every career and life task. This class is intended to provide background and guidelines on what is good communication in a business setting. Activities will be punctuated by theories, attitudes and behaviors of researchers, educators, or business leaders regarding essential communications and leadership practices. There will be frequent opportunities to interact, write on concepts, and present original contributions through the class community environment. It will include a review of Dual Motive Theory, understanding how brain functions of ego and empathy can impact behavior and relationships.

MGT 579 BUSINESS ETHICS (3)
Prerequisites: None
This course introduces ethical decision-making in business environment. It examines the individual, organizational, and macro level issues. The course does not attempt to determine correct ethical action. In the complex business environment in which managers confront ethical decision-making there is no absolute right or wrong answer in most cases. Since there is no general agreement on the correct ethical business norms, critical thinking and relevant decision making are examined. It will also discuss Dual Motive Theory in terms of Ego/Empathy and ethical/unethical behavior to understand how brain functions can impact human behavior and relationships.

MGT 580 BUSINESS LAW (3)
Prerequisites: None
Business law reviews issues with the legal problems confronting businesses such as court procedures, contracts and property law. Other topics include court systems, litigation, and alternative dispute resolution; constitutional
MGT 581 MANAGING EMOTIONS, MANAGING SELF AND OTHERS (3)
**Prerequisites: None**
This course will describe the aspects of Emotional Intelligence and managing yourself and others, starting with self-awareness, empathy, and regulating emotions for self and others to sustain healthy and authentic relationships. Other aspects include positive and negative emotional contagion, EI’s effect on morale, leading and professionalism. It will include a review of Dual Motive Theory, understanding how brain functioning of ego and empathy can impact behavior and relationships. Finally, the class will study evaluations of cognitive, emotional and social competencies and scholarly research showing how humans flourish.

MGT 582 TEAM AND GROUP DYNAMICS (3)
**Prerequisites: None**
Team and Group Dynamics are an essential component in every career and life task. In this course, students will learn and apply the skills required for effective teamwork that applies in many industries. Our activities will be punctuated by theories, attitudes and behaviors of researchers, educators or business leaders regarding essential teams and group dynamics. There will be frequent opportunities to interact, write on concepts, and present original contributions through the class community environment. We will include a review of Dual Motive Theory, understanding how brain functions of ego and empathy can impact behavior and relationships.

MGT 583 GLOBAL ENTREPRENEURSHIP AND INNOVATION (3)
**PREREQUISITES: NONE**
THIS COURSE FOCUSES ON METHODS AND KNOW-HOW OF EFFECTIVELY MANAGING INNOVATION AND ENTREPRENEURSHIP. THROUGHOUT THE SEMESTER THE THEORY AND PRACTICE OF MANAGING INNOVATION IN SMALL AND LARGE COMPANIES WILL BE DISCUSSED. TOPICS SUCH AS STRATEGIES, BUSINESS MODELS, RISKS, FUND RAISING TECHNIQUES ARE EXPLAINED. THE COURSE EMPHASIZES LEARNING AND PRACTICAL ISSUES THROUGH READINGS, CASE ANALYSES, WRITTEN ASSIGNMENTS AND IN-CLASS DISCUSSION. THE CASE STUDIES WILL INCLUDE COMPANIES FROM AROUND THE WORLD THAT HAVE BEEN SUCCESSFUL IN INNOVATING REPEATEDLY AND THOSE WHO WERE NOT ABLE TO RE-INVENT AND HENCE FAILED. THE ASSIGNMENT WILL COMBINE BOTH STRATEGY AND IMPLEMENTATION OF INNOVATION AND ENTREPRENEURSHIP SO STUDENTS CAN CRITICALLY EVALUATE APPROACHES TO MANAGING INNOVATION AND ENTREPRENEURSHIP AND PROVIDE PRACTICAL HELP IN THIS CONTEXT.

MGT 584 SUPPLY CHAIN MANAGEMENT (3)
**Prerequisites: None**
The business world today is becoming increasingly global and complex. The overall success of an organization relies more and more on the efficiency and effectiveness of its supply chain. Having a superior product means nothing unless it is delivered to customers on time and in perfect condition. With the strategic combination of people, tools, processes and technologies, effective supply chain management can boost customer service, improve bottom line and enable an organization to successfully compete in the global marketplace.

Formerly known as, MKT 584 “Supply Chain Management”
August 2015 - July 2016.

MGT 593 INTRAPRENEURSHIP – INNOVATION FROM WITHIN (3)
**Prerequisites: None**
This course speaks directly to the needs of an organization seeking to create an innovative business opportunity within the existing structure of the organization. The methods from this class are widely used by the most successful innovators in start-ups as well as established companies. This class will present the differences between entrepreneurship and intrapreneurship. Innovation and creativity are key components of intrapreneurship.

MGT 608 BUSINESS STATISTICS (3)
**Prerequisites: Calculus, Algebra II, or equivalent**
With many unfamiliar concepts and complex formulas, business statistics can be confusing and demotivating experience for students that do not have a strong mathematics background. They can have trouble recognizing the importance of studying statistics and making connections between business problems and the statistical tool that can be used to solve them. This seventh edition of Business Statistics: For Contemporary Decision Making has been designed to provide students with better explanations and examples thus providing a smoother path to understanding and the ability to choose the correct techniques to apply for a given problem.

MGT 611 LEAN SIX SIGMA (3)
**Prerequisites: Calculus, Algebra II, or equivalent**
Six Sigma is a proven methodology for solving problems in many areas of business, science, and industry. It is essentially a structured approach to the scientific method of problem solving based on the DMAIC acronym (Define, Measure, Analyze, Improve, and Control). The methodology helps in design, development, monitoring, and evaluation of processes, products, or services. The Six Sigma methodology incorporates business process, statistical, quality, and project management principles and practices with a goal of creating a systematic and data-driven decision making environment. Many successful companies utilize the principles of Six Sigma to meet growing customer expectations and to deliver better products and services in today’s competitive marketplace. This course covers an overview of the Six Sigma principles, process, and implementation, and provides required information for taking Six Sigma Green Belt or Black Belt certification examination.

MGT 612 ADVANCED PROJECT MANAGEMENT (3)
Prerequisites: MGT 575, or equivalent
This course offers a study of the human and the operational sides of project management. The human side includes discussion on negotiating and conflict management, leveraging diversity, and selling project management. The operational side includes scope control techniques, risk management, and organizing for success. The students will learn how to effectively engage the project team, deal with the inevitable conflicts, and use intellectual and cultural diversity to encourage creative problem solving.

MGT 690 PITCHING A BUSINESS PLAN TO VENTURE CAPITALISTS (3) – CAPSTONE PROJECT
Prerequisites: MGT 503; Completion of 27 credit hours in the program
In today’s extremely competitive world of raising money for startup companies, it is absolutely critical to have an effective and well-conceived pitch deck that compliments the project’s vision and strategy. Only 1 of every 200 business plans submitted to venture capitalists (VCs) gets funded, so it is vital to present a well thought-out presentation that includes all of the elements that VCs (or any type of potential investor) will be looking for in deciding whether to invest in your company or not. Whether the student is interested in starting their own company someday, wants to work for a startup, or just wants to learn more about venture capital, Silicon Valley and startups in general, this will be a great opportunity to discover how startup companies have successfully raised money. All new students are required to take Outbound exam with Peregrine Academic Services. The Outbound exam is required to be taken in the capstone course, either MBN 697 Master Thesis or MGT 690 Pitching a Business Plan to Venture Capitalists. Taking the Outbound exam will have a fee which is currently $34. The Outbound exam is REQUIRED not OPTIONAL. Information on how to take the exams will be included in the course syllabus. Any new student who does not take the Outbound exam, will not be eligible for graduation. Current students are encouraged to take the exam.

MIS (MANAGEMENT INFORMATION SYSTEM)
MIS 527 TECHNOLOGY AND OPERATIONS MANAGEMENT: CREATING VALUE (3)
Prerequisites: None
The course explains the design, management, and development of technology and operating systems. It explores diverse quantitative problems that occur often in the business environments. It discusses how such problems can be properly solved with a join business insight and technology tools. Topics such as capacity management, service operations, organized decision making, limited optimization and simulation are included. This course teaches the model of complex business situations and the tools to enhance business performance. This course offers an outline of the field of operations technology. A managerial perception is assumed and highlight is placed on the understanding of how technologies for manufacturing, distribution, and service developments are used for competitive advantage.

MIS 537 MANAGEMENT INFORMATION SYSTEMS (3)
Prerequisites: None
This course explains the concept of managing information systems as a part of a broader socio-technical system and their impacts on people and processes in the business environment. Critical thinking is an important and essential part for the understanding of important issues associated with the management aspects of information systems. The course focuses on how the organization has used and can use its information resources to best serve its needs.

MIS 538 BUSINESS DATABASE APPLICATIONS (3)
Prerequisites: None
This course provides a basic overview of the concepts, principles, skills and techniques of business database systems and of database application system development. The course provides an approach to the design and use of databases for business applications. The study focuses on query languages and application generation. Use of database software applications are a necessity in current business environments.

MIS 539 BUSINESS TELECOMMUNICATIONS (3)
Prerequisites: None
This course offers an overview of communications technology used in many business applications - local area network, wide area network, broadband network, wireless, and voice network. The course helps the students understand the role of internet protocols. In addition, it provides training to analyze network requirements, design, and implement local area networks.

MIS 540 INFORMATION RESOURCE MANAGEMENT (3)
Prerequisites: None
This course explains the concept of viewing information systems resources from a strategic resource standpoint. The course will provide pragmatic tools for implementing the IRM within the organization. Topics will include Information System outsourcing, total cost of ownership, Information System planning and strategic analysis, management of IT human resources, traditional project management theory, and project management techniques. It will include a review of Dual Motive Theory, understanding how brain functions of ego and empathy can impact behavior and relationships.

MIS 541 MANAGING GLOBAL INFORMATION SYSTEMS PROJECTS (3)
Prerequisites: None
This course helps the students learn how to plan and manage global information systems projects by focusing on initiating, planning, executing, controlling and closing projects. Topics such as integration, scope, timing, cost, quality, human resource, technology, communications, risk, and procurement are discussed. The students will learn how to monitor project plans and communicate reports to clients. The course will have a team project that will require students to conduct literature review or survey of current practices in the industry.

MIS 542 INFORMATION SYSTEMS INNOVATION (3)
Prerequisites: None
This course provides the tools and the skills to leverage emerging information technologies in order to create new business opportunities for both new entrepreneurial
ventures and traditional firms. The course helps the students to understand, evaluate, and apply difficult topics such as new innovative and entrepreneurial information technologies.

**MIS 543 HUMAN-COMPUTER INTERACTION (3)**
*Prerequisites: None*
This course focuses on key factors in Human-Computer interaction. Topics include design elements, test procedures, experimental tools, and human-computer environments contributing to the development of successful user interfaces are discussed. Additionally, research topics will be explored in the areas of design principles, methodologies, implementation, and evaluation of user interfaces.

**MIS 544 BUSINESS DECISION SUPPORT SYSTEMS (3)**
*Prerequisites: None*
Focus of this course is to study decision making process in business environment. Managerial role in decision making and steps involved in the process will be discussed. Theoretical modeling of decision making and practical applications will be explored using Microsoft Excel and/or other software packages. Part of the course, decision support models such as break-even analysis, goal seeking, linear programming, decision tree analysis, statistical modeling, etc. will be used in defining decision support systems to address various business scenarios.

**MIS 545 DATA MINING AND BUSINESS INTELLIGENCE USING SAP (3)**
*ITU/SAP University Alliance*
*Prerequisites: None*
This course teaches the students business potential of big data and analytics, data warehousing, how to develop and retain data warehouses, and how to use this data for business benefit and as a source for business intelligence. Business intelligence is the use of logical software devices to study big data about an organization and its competitors in business planning and decision-making. In developing data warehouses, the course will address the inter-relationships among operation, decision support structures, plan and the removal and cleaning process used to create a high quality data warehouse. Data mining theories and the use of data mining devices and techniques for decision-making and for creating business intelligence are discussed. This course uses SAP case studies and products to address Business Intelligence issues in real life in the pursuit of competitive advantages.

**MIS 546 DATA SCIENCE FOR BUSINESS (3)**
*Prerequisites: None*
Data Science for Business introduces the fundamental principles of data science, and walks the student through the “data-analytic thinking” necessary for extracting useful knowledge and business value from the data they collect. The course provides examples of real-world business problems so the student will not only learn how to improve communication between business stakeholders and data scientists, but also learn how to intelligently participate in and manage their company’s data science projects. This course will help the student discover how to think data-analytically and fully appreciate how data science methods can support business decision-making.

**MIS 547 SOFTWARE DEVELOPMENT PROCESS MANAGEMENT (3)**
*Prerequisites: None*
This course helps the students to understand the software development process at both the project and organization levels. In addition, it provides the students with the tools to analyze software cost and schedule transaction issues, and teaches them how to apply the principles and techniques to practical situations. Topics include statistical decision theory, and software risk management.

**MIS 548 KNOWLEDGE MANAGEMENT (3)**
*Prerequisites: None*
Knowledge management (KM) is considered a competitive resource in organizations that promotes innovation, improves efficiency and effectiveness, and provides a sustainable competitive advantage in today’s global environment. This course acquaints the student with organizational and managerial issues and examines Knowledge Management process and systems for supporting KM. Principles of developing systems for KM are explored. System architectures, tools and techniques, and their use in capturing, storing, locating, evaluating, disseminating, and using information and knowledge will be discussed. Application of these principles and techniques through the use of information/communication technologies is studied in the context of their impact on organization.

**MKT (MARKETING)**

**MKT 551 COMPETITIVE MARKETING STRATEGIES (3)**
*Prerequisites: None*
This course presents ways of finding new marketing opportunities, and enhancing marketing performance. Competitive marketing strategy describes how firms identify opportunities to create customer value and communicate this value efficiently. The key issue is to understand the drivers of greater customer and creating competitive advantage in the marketplace. The course explains the efficiency of strategic marketing decisions. The course offers strategy development by discussing important analysis of various cases from consumer, supplier, and technological markets; production and service businesses for-profit and non-profit sectors. Students will learn how to build a marketing plan.

**MKT 582 MARKETING MANAGEMENT (3)**
*Prerequisites: None*
This course presents an approach to understand and manage the marketing function. The students will learn how to develop a written marketing plan to determine and integrate elements of a marketing strategy. Topics include market segmentation, positioning and research; product decisions; pricing; channels of distribution; advertising; promotion; new product development; and marketing budgets. The course will introduce the role of marketing in the U.S. economy and the interaction of marketing with specific business functions and with society.
MKT 583 ENTREPRENEURIAL MARKETING (3)  
Prerequisites: None  
This course provides entrepreneurs with an understanding of marketing for new and small enterprises. It addresses marketing strategies. The students will apply marketing concepts, such as creating and nurturing relationships with new customers, suppliers, distributors, employees, and investors. This course brings together theory and practice to develop a comprehensive entrepreneurial business marketing plan.

MKT 585 INTERNATIONAL MARKETING (3)  
Prerequisites: None  
The course presents to the students the major factors of the international marketing decisions. The student will learn about the forces that influence the global marketing environment. The course introduces students to principles, policies, procedures, ethics, and techniques used in efficient and effective international market. International product, price, promotion, and distribution issues are discussed.

MKT 586 MARKETING RESEARCH (3)  
Prerequisites: None  
The broad objective of the course is to provide a fundamental understanding of marketing research methods employed by well-managed firms. The course is aimed at the manager who is the ultimate user of the research and thus is responsible for determining the scope and direction of research conducted. In the course, we will cover the types of research design, techniques of data collection and data analysis. Emphasis will be on the interpretation and use of results rather than on the mathematical derivations. The course focuses on helping managers recognize the role of systematic information gathering and analysis in making marketing decisions, and develop an appreciation for the potential contributions and limitations of marketing research data. This course examines the role of marketing research within the overall marketing program and within the company or organization seeking research information. It describes the research process and identifies the most common and potent research methods and techniques while providing an opportunity to learn by applying them to a class field project.

MKT 587 COMPARATIVE STUDIES OF MNC, FDI, AND INTERNATIONAL TRADE (3)  
Prerequisites: None  
Students will study international business and management environments by covering topics such as the international monetary system, import-export, growing competition and trading relationships in a global community. Case studies are presented relating to ethical issues that arise in international business to develop fundamental knowledge of international research and development, marketing, distribution, finance, and accounting.

MKT 588 CONSUMER BEHAVIOR (3)  
Prerequisites: None  
This course focuses on how to assess customer behavior and interprets this knowledge into marketing strategies. Topics include customer satisfaction and dissatisfaction, and the role of quality, TQM, and cycle time. In addition, the course introduces concepts such as motivation, perception, knowledge, attitude, and culture on customer decision-making. The course is designed for students interested in consumer, service, high-tech, or not-for-profit marketing. This course evaluates consumer or customer behavior in the marketplace. This course will help future and current consumer oriented professionals, service oriented performers in the high technology or non-profit sectors. The course will also discuss Dual Motive Theory in terms of Ego/Empathy and ethical/unethical behavior to understand how brain functions can impact human behavior and relationships.

MKT 589 E-COMMERCE (3)  
Prerequisites: None  
This course provides introduction to e-Commerce and related subjects. The course will cover e-Commerce infrastructure and its related technologies. Various business models used in e-commerce will be discussed in the lecture. The student will have knowledge of e-commerce when s/he finishes this course.

MKT 590 MARKETING WITH SOCIAL MEDIA (3)  
Prerequisites: None  
In this course, students will gain the knowledge and skills to effectively use social media to market their business. The Social Media Marketing course will teach students the basics of content creation and management for social media including blogs, podcasts, and posts. Students will be introduced to the most popular platforms such as Facebook, Twitter, YouTube, LinkedIn, and Pinterest. Students will learn which platforms are the best fits for their company and metrics for measuring social media marketing success. This course will also address the legalities of social media, search-engine optimization, and crowd sourcing.

MKT 591 ADVERTISING STRATEGY (3)  
Prerequisites: None  
This course will teach the students the new world of Marketing Communication, and the importance of advertising and e-advertising. Topics include analyzing advertising campaigns, advertisements in a structured way, brand equity through advertising strategy, advertising effectiveness and creativity, and end-to-end advertising strategy campaign.

MKT 592 SUPPLIER/SELLER MANAGEMENT (3)  
Prerequisites: None  
This course will explain all aspects of outsourcing, including planning, finding the right vendor, and negotiating effectively. Topics include relationship building, creating a culture of cooperation, and skills in dealing with vendors. The course will teach the buying and selling processes that corporations use in business-to-business transactions. The focus of the course is on the concept of selling, improving value, and meeting the needs of clients through effective questioning, analysis, sales planning and presentations. The students will learn the major phases of the sales process, the sales objectives for each phase, the client needs, and the solutions’ presentation. It will also discuss Dual Motive Theory in terms of Ego/Empathy and self/other behavior to understand how brain functions can impact human behavior and relationships.
**MKT 593 MARKETING WITH DIGITAL PERSPECTIVES**  
**USING SAP CRM (3)**  
ITU/SAP University Alliance

**Prerequisite: None**

Digitization, social media, and the web have redesigned the way organizations interact with their customers, clients, and markets. In pursuing ever declining competitive advantages, the pressures for organizations to reach, convert and retain customers are enormous. This course seeks to empower current and intending marketing professionals with the tools of the digital future to reach target markets using the various modalities available to them, including but not restricted to social media platforms.

Students will use the SAP CRM and/or the SAP Hybris Suite to work through Digital Marketing case studies in the professional environment. Other key topics of interest such as Search Engine Optimization, Social Media Marketing, Online Advertising, Web Analytics, and Marketing Data Visualization will also be covered.

This course is designed to be case study based, practical, and rooted in real world projects and application. On completion of this course, students will be well poised for relevant SAP CRM, SAP Hybris, American Marketing Association (AMA) Digital Marketing and the HootSuite Academy certifications (depending on their work in the SAP and Marketing fields).

**Certification/award eligibility:**

This course can be used towards the following certificate/certification and award schemes:

4. ITU/SAP University Alliance Joint Recognition Award
5. SAP CRM and/or SAP Hybris certification (based on completion of exam directly with SAP)
6. American Marketing Association (AMA) Digital Marketing Certification (based on completion of exams with AMA)
7. HootSuite Academy (based on membership with the Academy and fulfillment of eligibility criteria)

**MKT 613 ADVANCED MARKETING (3)**

**Prerequisites: MKT 582, or equivalent**

The course will explain the importance of marketing, which include market research, competitor analysis and the consumer analysis. The student will explore the marketing process, and concept. In addition, the course will provide a study of the relationship between the marketing mix, and the changing business environment.

**FACULTY**

- Amal Mougharbel, PhD, Université de Corse Pascal Paoli, Business Management, Department Chair

**CORE FACULTY**

- Ramesh Konda, PhD, Nova Southeastern University, Computer Information, Core Faculty and Assistant Chair
- Aguilera, Frank, DBA, Golden Gate University, Public Policy
- Bhat, Nutan, MBA, International Technological University, ERP/SAP
- Ghofraniha, Jahan, PhD, University of British Columbia,

**ADJUNCT FACULTY**

- Allen, Karen Haley, MBA, University of San Francisco, Human Resources and Organization Development
- Amistad, Felino Anthony, JD, California Southern University, Law
- Arnoldussen, Barbara, DBA, International Technological University, RN, PHN, San Jose State University, Nursing, Project/Program Management
- Flores, Jimmie, PhD, PMP, RMP, CAPM, SSBB, SPHR, GPHR, Security+, ITIL, University of Phoenix, Information Systems and Technology, PhD, Fielding Graduate University, Human and Organizational Development
- Gopal, Venkatesh, PhD, Anna University, BioTechnology
- Halawi, Leila, DBA, Nova Southeastern University, Information Technology Management
- Hyatt, Stephen, PhD, University of Windsor, Windsor, Engineering and Quality
- Mengina, Prasad V., MS, Engineering, University Of New Orleans, SAP
- Rahimian, Esmail, PhD, California Coast University, Management
- Walsh, Mark, MBA International Business, MS Financial Planning, CFP, CPA, PMP

**Electrical Engineering**

- Wigin, Patty, MBA, DBA, International Technological University

92
Mission
The Department of Computer Science strives to prepare its graduates for successful careers as computer scientists or software engineers in all fields of society that experience computerization in any form and in the software industry.

Institutional Learning Outcomes
1. Problem Solving: Construct, interpret, analyze, and evaluate information and ideas derived from a multitude of sources in order to reach reasoned solutions or alternative strategies to solve problems.
2. Critical Thinking: Analyze facts and information from multiple sources in order to assess the relevance and synthesize that information in order to formulate meaningful arguments and conclusions.
3. Communication: Interact clearly and effectively in written and oral forms with personal and professional constituencies.
4. Team Work: Operate collaboratively and respectfully as members and leaders of diverse teams and organizations.
5. Technical Literacy: Work responsibly, appropriately and effectively, using technology tools to access, manage, integrate, evaluate, create and communicate information and innovation.
6. Research: Identify and implement systematic methodologies for discovering, understanding, analyzing and interpreting materials, information and behaviors.
7. Responsibility: Practice sound, ethical, and social responsibility in professional and personal endeavors and decision-making.

Program Learning Outcomes (PLOs)
Upon completion of this program, graduates will:

PLO #1: Be able to identify and apply current and emerging software engineering technologies required for the creation of reliable, predictable, well-engineered software systems. (Mapped to ILO #1, ILO #2)
PLO #2: Be able to utilize multiple programming paradigms, including object-oriented, functional, logic, and emerging programming technologies. (Mapped to ILO #1, ILO #2)
PLO #3: Show understanding of SE principles and practices as described in the SWEBOK, and other emerging software development processes. (Mapped to ILO #5, ILO #6)
PLO #4: Have sufficient skills in human factors to be able to interact with stakeholders from multiple disciplines on the systems engineering level. (Mapped to ILO #3, ILO #7)
PLO #5: Have working skills in SE management including team building, leadership, project planning, selection of tools and processes appropriate to a project. (Mapped to ILO #1, ILO #4)

Career Opportunities
Jobs within software engineering include, but are not limited to: Software Development Engineering, Software Applications Engineering – analysis, design, construction, testing, as well as the economics, and management issues of the creation and maintenance of software. A Software Engineer has the special knowledge and skills necessary to develop and maintain large, complex software systems.

Program Requirements
REQUIRED COURSES:
- 4 Core Courses: 12 credit hours
- 1 Capstone Course: Project or Thesis: 3 credit hours
- 1 Internship: 1 credit hour
- Elective Courses: 11-20 credit hours
- Internship: 1-9 credit hours
- Cross Disciplinary Course: Up to 3 credit hours (counts as Elective)
- Transfer Credits: Up to 9 credit hours (counts as Elective)
36 Total credit hours

GRADE POINT AVERAGE (GPA)
A minimum 3.0 cumulative GPA is required for granting of the Master’s degree.

REQUIRED CORE COURSES
- SWE 500 Software Engineering
- SWE 600 Advanced Software Engineering
- SWE 602 Software Requirements Elicitation
- SWE 680 Software Architecture

CAPSTONE COURSES
- SWE 690 Capstone Project
- SWE 695 Master’s Thesis

ELECTIVE COURSES
Electives from the MSSE curriculum must be chosen so that the total number of credit hours in the MSSE program is at least 36.
- AMS 510 Linear Algebra
- AMS 512 Applied Mathematics Methods
- AMS 520 Optimization Techniques
- AMS 530 Numerical Analysis
- AMS 540 Discrete Mathematics
- AMS 552 Probability, Statistics, and Reliability for Engineers
- AMS 722 Advanced Applied Mathematics Methods
- CSC 501 Discrete Structures
- CSC 502 Principles of OS & Distributed Systems
- CSC 505 The UNIX/Linux OS
- CSC 509 C Programming
- CSC 511 OO Programming with C++
- CSC 512 Data Structures
- CSC 515 iPhone Application Development
- CSC 518 OO Programming with Java
- CSC 519 Android Phone Application Development
- CSC 520 Python Programming
- CSC 522 R Language Programming
- CSC 525 HTML/CSS Programming
- CSC 527 Mobile Web Programming
- CSC 530 JavaScript Programming
- CSC 532 Client Programming with JS/jQuery
- CSC 535 Server Programming With PHP
- CSC 545 Programming In GO
- CSC 550 Big Data
- CSC 555 Bio Informatics
- CSC 560 Introduction to Data Science

- CSC 580 Computer Algorithms
- CSC 610 Ruby on Rails
- CSC 615 Angular JS
- CSC 620 Programming Language Theory
- CSC 625 Advanced HTML5
- CSC 630 Scala Programming
- CSC 631 Data Mining
- CSC 633 Machine Learning
- CSC 640 Artificial Intelligence
- CSC 650 Big Data Analytics (CPO-SAS/SPSS)
- CSC 660 Advanced Data Science
- CSC 680 Advanced Computer Algorithms
- CSC 688 Special Topics (1 to 3 credit hours)
- CSC 689 Independent Study (1 to 3 credit hours)
- CSC 720 Formal Methods
- CSC 730 Cryptography & Cryptanalysis
- CSC 750 Coding Theory
- ICS 501 Introduction to Cyber Security
- ICS 502 Cyber Attack Countermeasures
- ICS 520 Personal Computer Security
- ICS 525 Principles of Ethical Hacking
- ICS 530 Cloud Computing Security
- ICS 535 Cloud and Virtualization Security (CPO)
- ICS 550 Security Policies
- ICS 570 Web Security Fundamentals
- ICS 601 Advanced Cyber Security
- ICS 620 Computer Malware
- ICS 630 Digital Forensics Technology
- ICS 670 Network & Data Security
- ICS 680 Theory of Cryptographic Systems
- ICS 688 Special Topics (1 to 3 credit hours)
- ICS 689 Independent Study (1 to 3 credit hours)
- SWE 518 User Interface Design & Implementation
- SWE 525 Version Control Tools/GIT
- SWE 540 SQA/Manual Testing
- SWE 542 SQA/manual/auto/perf Testing
- SWE 544 SQA/Software Testing Tools
- SWE 546 SQA/Performance Testing
- SWE 550 Software Project Management (CPO-ACP)
- SWE 560 Principles of Database Systems
- SWE 561 Cloud Computing
- SWE 562 Oracle Database Management/Administration
- SWE 570 Internet of Things Architecture and Security
- SWE 632 Software Risk Management
- SWE 633 Software Refactoring
- SWE 688 Special Topics (1 to 3 credit hours)
- SWE 689 Independent Study (1 to 3 credit hours)

INTERNSHIP
- CFL 591 Integrating Academic & Internship Learning (2 Credit hours)
- INT 593 Internship (1-3 credit hours)
Computer Science is the science of computation using a programmable computing machine, of developing the programs for the computation, developing algorithms for solving computational problems, of acquiring, storing, managing data and information needed in those computations, and of estimating or predicting the feasibility and time constraints of arriving at solutions.

Graduate programs in Computer Science (CS) differ from undergraduate programs not so much in the topics they cover but in the depth in which the topics are covered. The student has to master deep knowledge of algorithms, operating systems, compilers, internals of databases, visual and sound recognition, robotics, and - in general – has to acquire sufficiently well-founded theoretical knowledge to contribute to computerization in fields not yet known.

The Computer Science Program (MSCS) is concerned with the theoretical as well as the practical issues of CS. The theoretical basis must be mastered because CS has a strong relation to mathematical and algorithmic thinking. An essential portion of a computer scientist's work consists of understanding and researching algorithms, as well as developing new ones.

This curriculum prepares the graduates for successful careers in the demanding and ever-growing job market in all fields of society that experience computerization in any form, be it web page design, IT security, software development in medicine, education, business administration, robotics, Internet of Things, and more. A solid knowledge of the computer science principles underlying all computerization and program development, augmented by training in leading edge practical skills will enable graduates to play leadership roles in industry as well as to pursue PhD degrees. The development of this graduate curriculum has taken the recommendations of the Joint Task Force on Computing Curricula of the IEEE Computer Society and the Association for Computing Machinery of August 2004 into consideration.

Program Learning Outcomes (PLOs)
Upon completion of this program, graduates will be able to:

PLO #1: Lead and organize Information Technology (IT) implementations at companies and institutions. (Mapped to ILO #1, ILO #3, ILO #4, ILO #5, ILO #7)
PLO #2: Invent and improve algorithms for storing, accessing, processing, and analyzing collected data. (Mapped to ILO #1, ILO #2, ILO #5, ILO #6)
PLO #3: Invent real time computation methods for analysis and processing of data in robotics (optical, sound, and other real time data from digital sensors). (Mapped to ILO #1, ILO #2, ILO #5, ILO #6)
PLO #4: Create innovative and useful features to modern operating systems (multiprocessor, multiprocessing, distributed). (Mapped to ILO #2, ILO #3, ILO #4, ILO #6)
PLO #5: Contribute to research and development of algorithms in all areas that are now and in the future subject to computerization. (Mapped to ILO #1, ILO #2, ILO #3, ILO #4, ILO #5, ILO #6, ILO #7)
PLO #6: Clearly explain Computer Science concepts in research, development, and educational institutions. (Mapped to ILO #2, ILO #3, ILO #5, ILO #6)
PLO #7: Show proficiency and skills in the most important areas of state of the art computer science. (Mapped to ILO #1, ILO #3, ILO #5)

Career Opportunities
Computer scientists often work in organizations that develop new technologies and algorithms. Examples include: pattern recognition and signal processing for self-driving cars, artificial intelligence, and data mining. The development of new algorithms often requires a deep understanding of mathematics including knowledge in certain areas of abstract algebra for developing new encryption technologies or counteracting attempts at breaking them. They often work doing research in computer science, as well as working as information technology consultants in banking, insurance companies, and higher education.

Hardly a day goes by when we don't hear about hacking of bank records or databases, penetration into sensitive government and business information and the damage this causes to our economy and security.

The Information and Cybersecurity (MSICS) program offers a holistic education in a variety of security technologies that goes beyond what the thousands of training courses in cyber security offer in order to combat this development, such as network security, risk and data management, preventative measures, computer ethics, digital signatures, and cryptography. The curriculum gives students the technical knowledge to take on a diverse set of industry-specific challenges.

Once students graduate from MSICS, they will be thoroughly educated cyber security professionals with practical skills and in high demand. They will understand the core problems behind cyber security and will develop solutions from the ground up.

Program Learning Outcomes (PLOs)
Upon completion of this program, graduates will:

PLO #1: Secure organizations’ on-premise and cloud-based computing resources (mapped to ILO #1, ILO #2, ILO#5, ILO#6)
PLO #2: Demonstrate in depth knowledge of IS techniques to provide leadership for effective solutions to security problems. (Mapped to ILO #1, ILO #3, ILO #4, ILO #7)
PLO #3: Have sound knowledge of IS techniques that play a role in organizational processes and decision-making. (Mapped to ILO #2, ILO #4, ILO #5, ILO #7)
PLO #4: Communicate effectively risk management issues and their impacts to a variety of audiences. (Mapped to ILO #1, ILO #3, ILO #5, ILO #6)
PLO #5: Understand the legal and appreciate the ethical importance of ICS for individuals as well as organizations. (Mapped to ILO #3, ILO #5, ILO #6)
#6, ILO #7)
PLO #6: Business enabler in organizations such as finance, insurance, healthcare, e-commerce, and mail services. (Mapped to ILO #1, ILO #2, ILO #4, ILO #7)
PLO #7: Work as security expert in federal agencies for whom cyber security is of highest importance such as DOD, DHS, and FBI. (Mapped to ILO #1, ILO #5, ILO #6, ILO #7)

Course Descriptions

Computer Science (CSC)

CSC 501 Discrete Structures (3)
Prerequisites: None

This course is about discrete structures and forms an introduction to the theoretical side of computer science. Discrete structures and discrete mathematics turn out to be the “calculus” of computer science--these are the structures that students will use to model real-world problems, to build algorithms upon, and to program with (both for modeling problems as well as use in data-structures and algorithms). In this course students will learn about various discrete structures (numbers, sets, relations, functions, trees, graphs), how to talk about them (propositional and predicate logic), how to prove things about them (using contradiction, construction, induction, combinatorics), and how to read and write literate formal mathematics. Students will also get a quick introduction to key applications to algorithmic analysis (like asymptotic worst-case running time analysis for algorithms). This “calculus of computer science” will serve students as a foundation for computational thinking.

CSC 502 Principles of OS & Distributed Systems (3)
Prerequisites: None

The course begins with basic principles of a monolithic OS, as exemplified by Linux, MacOS, and Windows, then advances to more sophisticated details of processes, preemptive multiprocessing, lightweight processes, and interrupts various types of interprocess communications, demons, file systems, signals, and paging, which are present on each independent node of the network. Then it advances to the specific software subsets on each node of the aggregate operating system composed of the multitude of nodes. Then it advances to the higher level of the global system management components given for each node that coordinate the nodes’ activities to form a collaboration. Coordination of the cooperation of an individual node’s kernel OS and management component by the management system. In a properly functioning integration the whole distributed system should exhibit transparency which means that it appears to the user as one single OS entity.

CSC 505 The UNIX/Linux OS (3)
Prerequisites: Recommended knowledge of C

Linus is a Unix like operating system that has been ported to

more hardware platforms than any other OS. It is the leading OS on servers, big computers including supercomputers, embedded systems, and mobile devices such as android. This course focuses on the practical usage of the basic Linux operating system features. It introduces the student to the general principles of modern operating systems: preemptive multiprocessing; and of Linux in particular: shells, environment, shell variables, processes, threads, interprocess communication, the Unix file system, and shell scripts. Upon completion of this course the student will be able to work efficiently in a Linux or Unix environment, to tailor an environment to specific needs, to understand the basics of Linux system administration, to understand security risks, to write C programs that use system calls, and to write scripts for the C shell.

CSC 509 C Programming (3)
Prerequisites: None

The course is an introduction to the C language as per the chapters of the book by Kernighan & Ritchie. The key topics covered will be C basics including Control Flow, Functions, Pointers, Structures, Memory Allocation/DE Allocation, Input/output (command line & files). The course will be very hands-on and students will be expected to test code from C books (list will be given in class), and thus understand the concepts.

CSC 511 OO Programming with C++ (3)
Prerequisites: None
Recommended: Knowledge of C

This class teaches Objected Oriented Programming using C++. Prior exposure to C is helpful but not required as the basic concept of C programming will be reviewed. The topics covered include: Syntax of C++, classes and objects, encapsulation, inheritance, polymorphism, design for reuse, programming with objects, the standard template library, namespaces, exceptions, type casting, and file input/output.

CSC 512 Data Structures (3)
Prerequisites: None

Recommended: Knowledge of C++ or Java

This course discusses the definition, design, and implementation of abstract data structures, including arrays, stacks, queues, heaps, and linked structures. Other data structures include hash tables, trees, and graphs. Students will also learn algorithms for manipulating these structures, searching, and sorting, and the simpler graph algorithms. An introduction to the analysis of some sorting and searching algorithms is also covered.

CSC 515 iPhone Application Development (3)
Prerequisites: None

This course provides a training in iPhone application development including: Introduction to Objective-C; iPhone technologies: multi-touch interface, accelerometer, GPS, maps, proximity sensor, dialer, address book and calendar. It helps students to understand the business aspects of an application development.

CSC 518 OO Programming with Java (3)
CSC 519 Android Phone Application Development (3)
Prerequisites: CSC 518
This course teaches the use of SDKs released by Google to facilitate the development of applications for the Android Phone. Android Phones are Linux based and are programmed in Java. This alone bodes very well for any software development on that platform: The Linux OS, the most powerful and easiest to manage of all operating systems, and the Java programming language with its superior GUI development capabilities. Knowledge of SDKs is certainly an advantage when developing for the Android platform.

CSC 520 Python Programming (3)
Prerequisites: None
Programming and problem solving using Python. Emphasizes principles of software development, style, and testing. Topics include procedures and functions, iteration, recursion, arrays and vectors, strings, an operational model of procedure and function calls, algorithms, exceptions, object-oriented programming.

CSC 522 R Language Programming (3)
Prerequisites: None
This course is an introduction to the R programming language, which is the premier language for statistical computing, machine learning, and data mining. Basic facilities of R contained in the course include mathematical, graphical, and interactive web applications. R is an open-sourced language used extensively in industry and in academia research. The course demonstrates methods for obtaining data from various sources, along with manipulating that data into a format that can be easily used in machine learning and data mining algorithms. The course covers a multitude of interactive visualization techniques along with the ability to share visualizations through web applications. This course provides insight into functional programming. The course covers reading and writing to and from various sources, R built in data types, controlling the flow of execution, using operators, functions, and R packages. The course includes methods of sharing analytic results in professional formats used by technical journals.

CSC 525 HTML/CSS Programming (3)
Prerequisites: None
This course will examine how to create web pages using HTML code. The use of Cascading Style Sheets (CSS) will also be covered. Basic website development tools and website design will be studied through the creation of several HTML/CSS web site projects.

CSC 527 Mobile Web Programming (3)
Prerequisites: CSC 525, CSC 530
This course is for experienced front-end Web developers who’d like to learn what it takes to create great mobile experiences. In order to succeed in this class, they should be comfortable with HTML, CSS, and JavaScript, and should have experience creating Web apps, either professionally or for fun. This course will teach Web developers how to build Web experiences that adapt to the different screen sizes and capabilities that mobile devices offer, and how to scalably optimize media for mobile and desktop. This course will cover programming touch interaction, as well as how to optimize form field input for mobile devices and use APIs like geolocation and the accelerometer, and ensuring their web experiences work great when network conditions are suboptimal. They will gain the tools to investigate performance in mobile applications, with a strong understanding of mobile networking, battery usage patterns and optimizing paint techniques to build smooth animations on mobile. Upon completion, the web developers will understand what it takes to build great web experiences on mobile devices, have gained experience with the tools they need to test performance, and be able to apply their knowledge to their own projects in the future.

CSC 530 JavaScript Programming (3)
Prerequisites: CSC 525
This course introduces JavaScript as a programming language. It will talk about variables, data types, conditionals, loops, arrays, event handlers, objects, string, forms, cookies, and functions. It will teach students how to use JavaScript to access and manipulate BOM (Browser Object Model) and DOM (Document Object Model), and how to use JavaScript to make Web pages interactive. It will teach students how to interact HTML, CSS, JavaScript, and DOM within a Web page.

CSC 532 Client Programming with JS/jQuery (3)
Prerequisites: CSC 525, CSC 530
jQuery is a JavaScript library designed to simplify the client-side scripting of HTML. It is designed to make it easier to navigate a document, select DOM elements, create animations, handle events, and develop Ajax applications. The topics of the course include: Basic jQuery syntax, jQuery element selectors, jQuery event handling, Ajax using jQuery, jQuery UI library.

CSC 535 Server Programming with PHP (3)
Prerequisites: CSC 525
PHP is one of the best server-side technologies for handling Web content easily and efficiently. PHP is a free, open-source language devoted primarily to handling dynamic web pages and used by millions of sites worldwide. It can be integrated with HTML and handle databases. The course starts with the development environment and the language syntax. It introduces the concepts of OOP in PHP at different levels. It also covers the interactions with HTML web pages and
Prerequisites: None

CSC 560 Introduction to Data Science (3)
Prerequisites: None

A practitioner of data science is called a data scientist. Data science leverage all available and relevant data to effectively predict a model that can be easily understood by non-practitioners. A major goal of data science is to make it easier for others to find and coalesce data with greater ease. Data science technologies impact how we access data and conduct research across various domains, including the biological sciences, medical informatics, social sciences and the humanities.

CSC 545 Programming in Go (3)
Prerequisites: None

Go, also commonly referred to as golang, is a programming language developed at Google in 2007 by Robert Griesemer, Rob Pike, and Ken Thompson. It is a statically-typed language with syntax loosely derived from that of C, adding garbage collection, type safety, some dynamic-typing capabilities, additional built-in types such as variable-length arrays and key-value maps, and a large standard library. Go projects are for networking, distributed functions, or services: APIs, Web servers, minimal frameworks for Web applications, and the rest. In its weekday modality the course is taught over 15 weeks with 2 hours lecture and 1 hour lab per week.

CSC 550 Big Data (3)
Prerequisites: Knowledge of Java

This course will introduce the basic concepts, tools, techniques, and applications. This course will cover the most up-to-date Big Data Technology including Hadoop Distributed File System (HDFS) and MapReduce engine as well as Business Intelligence tools.

CSC 555 Bio Informatics (3)
Prerequisites: None

Recommended: Knowledge of C++ or Java

This course starts with a brief introduction to molecular biology. It then investigates the main algorithms used in Bioinformatics. After a brief description of commonly used tools, algorithms, and databases in Bioinformatics, the course describes specific tasks that can be completed using combinations of the tools and Databases. The course then focuses on the algorithms behind the most successful tools, such as the local and global sequence alignment packages: BLAST, Smith-Waterman, and the underlying methods used in fragment assembly packages. Lecture topics include Dynamic Programming for pairwise alignment; Hidden Markov Models for pattern recognition, conducting profile-based searches and transmembrane protein structure prediction; phylogenetic tree construction and RNA structure prediction, and the use of SNPs and haplotypes in genomic variation, in pharmacogenomics, in genome-wide association studies and in personalized medicine.

The course is self-contained and does not assume any background knowledge in biology, although an interest is molecular biology is helpful. The course will be complemented by hands-on, computer lab sessions that will allow the participants to practice with some of the major tools and databases. Students will solve hands-on problems on HIV, BRCA1 gene, Thalassemia, etc.

CSC 560 Introduction to Data Science (3)
Prerequisites: None

This course provides an overview of common programming paradigms, including imperative, object-oriented, logic, and functional programming, and discusses the fundamental concepts underlying the design, definition, and implementation of modern computer languages. Students will get practical experience with languages that exemplify a particular paradigm.

CSC 580 Computer Algorithms (3)
Prerequisites: None

This course will cover algorithm design, sorting, searching, graph algorithms, stacks, queues, and dictionary implementations, divide and conquer algorithms, dynamic programming, randomized algorithms, amortized analysis, lower bound analysis, NP-Completeness.

CSC 610 Ruby on Rails (3)
Prerequisites: None

Recommended: Knowledge of HTML, JavaScript, database

This course offers a comprehensive introduction to Ruby on Rails, an open source web application framework for the Ruby Programming language. Ruby on Rails makes it easy to build a modern Web application. It includes everything that is needed to build applications.

CSC 615 Angular JS (3)
Prerequisites: None

Recommended: CSC 530 or previous programming experience in JavaScript

AngularJS provides a layer on top of Jquery and DOM, reduces boilerplate code and improves maintainability. The best use of AngularJS is the consistent manner in which a new developer can generate the code for the structure and the layout. Once the structure is ready, the developer can concentrate more on look and feel rather than routine boiler plate code and cruft. The chapters covered include Introduction, Directives and Controllers, Unit Testing, Forms, Input and Services, Server Side communication using http.

CSC 620 Programming Language Theory (3)
Prerequisites: None

Recommended: Knowledge of Discrete Mathematics for Computer Science

This course provides an overview of common programming paradigms, including imperative, object-oriented, logic, and functional programming, and discusses the fundamental concepts underlying the design, definition, and implementation of modern computer languages. Students will get practical experience with languages that exemplify a particular paradigm.

CSC 625 Advanced HTML5 (3)
Prerequisites: CSC 525, CSC 530

This course is for Web developers who have solid experience in the basics of HTML5. This course will take the Web developers deep into the advanced techniques and functions that HTML5 has to offer. This course will first explore some
JavaScript basics - writing to an HTML page, using variables and functions, interacting with HTML, looping and drag and drop functions. Then the course will continue by exploring how to utilize and create custom media controls. The course will cover the more popular CSS3 features such as transform, translation and animation, and HTML5 Form API, Canvas, Geolocation, Drag and Drop, Web Storage, Communication, Messaging, History, Offline, indexDB, File, Web Workers, and finally, HTML5 for Mobile Apps. Upon completion, the Web developers will have a deeper understanding of how to take advantage of the many new features and functions that HTML5 has to offer.

CSC 630 Scala Programming (3)
Prerequisites: None
This course is an introduction to software programming using Scala, a programming language evolved from Java. The main advantage of Scala is its versatility. It has combined features of scripting language, objective oriented language and functional programming language. The last feature is particularly useful in Web and multicore applications that require concurrent data processing. Scala has been adopted by some leading high-tech companies. For example, in 2009, Twitter announced that it had switched large portions of its backend from Ruby to Scala and intended to convert the rest. To make learning easier, we will first introduce scala as a scripting language. We will then describe its objected oriented features (including class, object, inheritance, polymorphism, etc.) and finally move on to its main functional programming features

CSC 631 Data Mining (3)
Prerequisites: None
This course provides an introduction to the theoretical concepts and practical applications of data mining. Data mining facilitates the extraction of hidden predictive information from large complex databases. It is a powerful new technology with enormous potential to help organizations and institutions extract and interpret important information. The course content includes the conceptual framework of data mining, descriptions and examples of standard methods used in data mining. Internet related data mining techniques are also covered. Data processing, statistical modeling, data warehousing and online analytical processing, data conditioning and cleaning, data transformation, text and web mining, mining massive datasets, data stream mining, data mining algorithms, association and correlation, pattern mining, classification, cluster analysis, outlier detection, knowledge discovery, knowledge representation, and validation.

CSC 633 Machine Learning (3)
Prerequisites: None
Recommended: Knowledge of basic computer science principles and skills, probability theory, and linear algebra.

Machine learning is a fast-moving field with many recent real world commercial applications. The goal of Machine Learning is to build computer model that can produce useful information whether predictions, associations, or classifications. The ultimate goal for many machine learning researchers is to build computing systems that can automatically adapt and learn from their experience. This course will study the theory and practical algorithms in Machine Learning. It reviews what machine learning is about, how it evolved over the past 60 years, why it is important today, basic concepts and paradigms, what key techniques, challenges and tricks. It also cover examples of how machine learning is used/applied today in the real world, and expose students to some experience in building and using machine learning algorithms. This course will also discuss recent applications of machine learning, such as to robotic control, speech recognition, face recognition, data mining, autonomous navigation, bioinformatics, and text and web data processing.

CSC 640 Artificial Intelligence (3)
Prerequisites: None
Recommended: Knowledge of Discrete Mathematics
This course introduces the foundation of simulating or creating intelligence from a computational point of view. It covers the techniques of reduction, reasoning, problem solving, knowledge representation, and machine learning. In addition, it covers applications of decision trees, neural networks, support vector machines and other learning paradigms.

CSC 650 Big Data Analytics (CPO-SAS/SPSS) (3)
Prerequisites: CSC 550
This course emphasizes the key aspects of data analytics for students intending to pursue certain professional certification, i.e., SPSS or SAS, upon the completion of the course. The first module introduces the fundamental statistical thinking to the computer scientist, including probability, random variables, and statistical inference. Then, predictive modeling techniques, such as linear and logistic regression, are covered to make transition to the supervised and unsupervised data mining techniques. In the last module of the course, some popular big data platforms, namely, Hadoop/Mahout and Spark/MLlib, are discussed from the data analytics point of view. Examples from the text and social media mining application are covered in the second and the third module. The commercial software (student version) is required and used through the first and second modules, such that the students can be fluent in the application to meet the certification requirement thus limited programming requirement.

CSC 660 Advanced Data Science (3)
Prerequisites: CSC 560
Recommended: Knowledge of R Language
This course builds on Introduction to Data Science by introducing the idea of data products and encouraging students to build products base on data analyses.

CSC 680 Advanced Computer Algorithms (3)
Prerequisites: none
This course covers advanced methods of algorithmic design, analysis, and implementation. Techniques to be covered
include amortization, randomization, network flow, linear programming, approximation algorithms, computational complexity, and NP completeness analysis. Domains include FFT, number theoretical algorithms, RSA encryption - decryption, various breaking attempts (factorization), primality checking, Diffie-Hellman key exchange, ElGamal encryption, algebra-based encryptions such as AES, cryptographic hash functions, pattern matching, and bioinformatics.

CSC 688 Special Topics (3)
Prerequisites: None
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline.

CSC 689 INDEPENDENT STUDY (1-3)
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

CSC 690 CAPSTONE PROJECT (3)
Prerequisites: Department approval and completion of 27 credit hours of the MSSE program
A capstone is the summative component of the master’s degree program submitted by a graduate student. The Capstone Project is designed to demonstrate the in-depth learning and higher-order thinking of the student. It is meant to be an analysis of knowledge, breaking the information down into its component parts, and also the synthesis of new knowledge, assembling the parts into a new coherent whole. The capstone is also meant to be practical and useful. The student should choose an area that is uniquely and personally important and research or perform a project in that area. The Capstone Project is performed by arrangement with the project advisor. The student must conduct independent research in an approved topic in software engineering, prepare a report and defend it before a faculty advisor.

CSC 695 Master’s Thesis (6)
Prerequisites: Department Chair approval and completion of 27 credit hours of the MSSE program.

The master’s thesis must be arranged with the capstone thesis advisor. After the topic is approved independent research in computer science toward the MS degree must be conducted. The research must result in some new insights into the academic or practical concepts of the CS world. These must be analyzed, explained, and documented in the thesis. After completing the thesis the student must defend it before a committee of faculty appointed by the Department Chair.

CSC 720 Formal Methods (3)
Prerequisites: None
This course will focus on fundamental mathematical models of computation. It will discuss both the inherent capabilities and limitations of these computational models as well as their relationships with formal languages. Rigorous arguments and proofs of correctness will be emphasized. Particular topics to be covered include: (1) Finite automata, regular languages, and regular grammars. (2) Deterministic and nondeterministic computations on various automata. (3) Context free grammars, languages, and pushdown-automata. (4) Turing machines, Church’s thesis, and undecidable problems.

CSC 730 Cryptography & Cryptanalysis (3)
Prerequisites: None
This course analyzes ways to protect information during transfer in computer systems and networks. It includes the mathematics of cryptography, Number theoretical concepts, RSA theory, Diffie-Hellman key exchange, ElGamal Discrete Logarithm and their application and use in distributed systems, secure internet services, digital signature, intrusion detection and firewalls; coding based encryption; post-quantum cryptography. Some factoring methods to be studied include Fermat, Pollard Rho, and Elliptic Functions.

CSC 750 Coding Theory (3)
Prerequisites: AMS 750
This class gives an introduction to coding theory. This course introduces examples for codes (ISBN, UPC, etc.) including binary codes, the meaning of important code parameters, detecting errors, correcting errors, sphere packing bound, and binary linear codes. Abstract algebra: fields and vector spaces, polynomial extensions of GF(2). Encoding linear codes: Introduction to generator matrices and parity check matrices, Hamming codes. Linear Algebra over GF(2), nullspace of a matrix, relation between generator and parity matrix. Error correcting codes, cyclic codes (BCH and Reed-Solomon codes), Goppa codes; syndrome decoding, the Patterson Algorithm.

Information Cyber Security (ICS)
ICS 501 introduction to cybersecurity (3)
Prerequisites: None
Overview of the field of Cyber Security: history and basics of cryptography, risk and data management, fundamental concepts, preventative measures, rules, regulations and legal issues, security testing and assessment, identity and access management, database security, computer ethics, digital signatures.
ICS 502 cyber attack countermeasures (3)
Prerequisites: ICS 501
Countermeasures for the preventing of cyberattacks. Firewalls – design, types and comparisons, intrusion detection, network access controls, network and browser encryption, network management, and secure systems development, cloud security.

ICS 520 personal computer security (3)
Prerequisites: None
Beginner’s computer security course for small office or home users. Learn to stop hackers, worms, viruses, spyware, web bugs and identity theft. Learn vulnerabilities found in web
browsers, email and operating systems. Protect against online purchase dangers, install firewalls, manage cookies, restrict ports, analyze log files, evaluate wireless networks and examine encryption.

ICS 525 Principles of Ethical Hacking (3)
Prerequisites: None
Recommended: Knowledge of C++, Java, or Python

In this course students will learn and practice hacking techniques used by malicious, black-hat hackers as a means to learn best defense from these same hackers. The course is an in-depth study using hands-on lab exercises. While these hacking skills can be used for malicious purposes, this course teaches you how to use the same hacking techniques to perform a white-hat, ethical hack, on your organization. The course trains for the CEH (Certified Ethical Hacker Certificate). Students will be trained to penetrate, test and hack their employers’ own computer system in order to safeguard it from real (malicious) hackers. The Ethical Hacker is a trustworthy employee of an organization trained to attempt to penetrate networks and/or computer systems by using the same methods and techniques as a malicious hacker. Through this the individual can learn and master the malicious hackers methods find the weak pointes in an organization’s network or computer systems and build safeguards against hacking attempts. The CEH is the most desired information security training program for any IT security professional.

ICS 530 Cloud Computing Security (3)
Prerequisites: SWE 561
This class provides students a comprehensive understanding cloud security fundamentals and advanced expertise in cloud environments. Starting with a detailed description of cloud computing, the course covers all major domains in the latest Guidance document from the Cloud Security Alliance, and the recommendations from the European Network and Information Security Agency (ENISA) with expanded material and extensive hands-on activities. Students will learn to apply their knowledge as they perform a series of exercises as they complete a scenario bringing a fictional organization securely into the cloud.

ICS 535 Cloud and Virtualization Security (CPO) (3)
Prerequisites: SWE 561
This course introduces the concepts and techniques of implementing and securing cloud computing through the use of virtualization and distributed data processing and storage. Topics include operating system virtualization, distributed network storage, distributed computing, cloud models (IAAS, PAAS and SAAS) and techniques for securing cloud and virtual systems. Practical experience of integrating private, public, and hybrid clouds and virtual servers securely into an existing IT infrastructure will also be covered.

ICS 550 security policies (3)
Prerequisites: None
The policies governing administration, management and enforcement of security issues are a separate, necessary element of Cyber Security, not based on some other more fundamental Cyber Security topic. They relate to network security, server security, application security. Explain the vulnerability of small firms. Examples: Policies for enforcing encryptions and strong passwords. Rewards for followers, punishment for non-followers; information in all its forms will be protected from unauthorized modification. All existing systems will be equipped with approved antivirus software. All new equipment and software will be controlled before installation. Set antivirus software for automatic update. No foreign equipment, including private USB thumb drives, are allowed to be used. Employees must know the policies.

ICS 570 Web Security Fundamentals (3)
Prerequisites: None
Recommended: Knowledge of HTTP, TCP/IP, SQL, and operating systems
This course introduces students to the fundamentals of computer security as the first step towards learning how to protect computers from hackers. The course begins by explaining the very basic concepts of computer security and provides substantial technical details to keep students interested and involved. It includes hands-on labs and graded and non-graded assignments for each unit that provide an opportunity to practice what the students learn. It also includes a few security games to make learning more exciting and interactive. Students are expected to be familiar with standard computer operations (e.g., login, cut & paste, email attachments, etc.) before enrolling in the course. This course will give students a clear vision on how all seven layers will work in IOS model and different levels of security in each layer.

ICS 601 advanced cyber securiTy (3)
Prerequisites: ICS 501
Cryptographic systems, communications and network security, security operations, security in the SW life cycle, investigations, resource protection, incidence response, implications of quantum computing.

ICS 620 computer malware (3)
Prerequisites: ICS 520
Definition of computer malware (viruses, worms, Trojan horses, rootkits, backdoors), Infectious malware, the functioning of malware, coding of malware, self-replication, techniques for evading detection; reasons for vulnerability to malware; anti-malware strategies, anti-virus software. Dangers of malware: identity theft, file and data corruption industrial espionage.

ICS 630 digital forensics technology (3)
Prerequisites: None
Recommended: ICS 520
General tools and techniques used in forensic analysis, investigating digital media and physical memory for securing evidence in criminal investigations, investigating computer crime; digital forensic software, mobile forensic analysis.

ICS 670 Network & Data Security (3)
Prerequisites: None
The course covers theory and practice of the security aspects of the web and Internet. It surveys cryptographic tools used to provide security, such as shared key encryption (DES, 3DES, RC-4/5/6, etc.); public key encryption, key exchange, and digital signature (Diffie-Hellman, RSA, DSS, etc.). It then reviews how these tools are utilized in the internet protocols and applications such as SSL/TLS, IPSEC, Kerberos, PGP, S/MIME, SET, and others (including wireless). System security issues, such as viruses, intrusion, and firewalls, will also be covered.

ICS 680 Theory of Cryptographic Systems (3)
Prerequisites: ICS 601
A deeper coverage of modern encryption system and the necessary mathematics. Classical cryptographic constructions, basic cryptographic algorithms, symmetric cryptography; public-key cryptography: RSA, AES (Rijndael) stream cipher, Diffie-Hellman, El Gamal, coding based cryptography: McEliece – Niederreiter. Basic issues and concepts of Network and Data Security such as data confidentiality, data and user authenticity, data integrity, key management and distribution; digital signatures.

ICS 688 Special Topics (1-3)
Prerequisites: None
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline.

ICS 689 Independent Study (1-3)
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

ICS 690 Capstone Project (3)
Prerequisites: Department approval and completion of 27 credit hours of the MSSE program.
The capstone project is a report, analysis, project, or program, submitted by a graduate student. It is designed to demonstrate the in-depth learning and higher-order-thinking of the student. It is meant to be an analysis of knowledge, breaking information down according to the analytical strength of the student’s thinking as well as synthesis of knowledge and assembling the parts into a new coherent whole.

ICS 695 Master’s Thesis (6)
Prerequisites: Department chair approval and completion of 27 credit hours of the MSSE program.
The master’s thesis must be arranged with the capstone advisor. After the topic is approved independent research in Information Security toward the MS degree must be conducted. The research must result in some new insights into the academic or practical concepts of the Information Security world. These must be analyzed, explained, and documented in the thesis. After completing the thesis, the student must defend it before a committee of faculty appointed by the department chair.

Software Engineering (SWE)

SWE 500 Software Engineering (3)
Prerequisites: None
In this class, students will learn the elements of engineering and the relationship of engineering to software practice. It also covers how those principles and practices apply to the design, development, and maintenance of software throughout the entire software lifecycle. The course introduces traditional and contemporary approaches to software engineering practice. These include: requirements development, architecture and detailed design, modeling, testing strategies, process selection, project management, how to interact with other engineers on large-scale systems, and more. This course includes a capstone team where students gain practical experience designing a software system from start to finish using software modeling techniques such as UML, as well as a variety of project management methods and tools. This is not a programming course, but a background in object-oriented programming (OOP) will be valuable in helping the student understand the demands of the capstone project.

SWE 518 User Interface Design & Implementation (3)
Prerequisites: None
This course introduces the principles of user interface development and the iteration of design-implementation-evaluation. It will study the important design principles to design good UI. Students will see different techniques for prototyping user interfaces and learn techniques for evaluating and measuring usability.

SWE 525 Version Control Tools/git (3)
Prerequisites: None
This course is designed to make the participants experts in git tool. It starts with fundamental concepts like git branch and continues to advanced topics like design and git workflow. The course covers different components of git and github and how they are used in software development operations. The course also covers installation & Configuration of github and other tools and techniques like github desktop, SourceTree and Sparkle share as well. Participants will also get to implement one project towards the end of the course.
Companies use git for creating and managing open source API’s and to help the open source community. It is github, a git repository hosting service founded just a few years ago to build software better, together. Most of the high paying companies are using git and github for their new, innovative and upcoming Software Languages. Open source software can now be made using github and you will be able to share your repositories with other developers so that they can also contribute. Github concepts can be implemented in Big Data and Hadoop technology, Java Projects and other frameworks as well. Some of the trending repositories in github are Scala and AngularJS.

SWE 540 SOA/Manual Testing (3)
Prerequisites: None
This course is a comprehensive introduction to Software Testing and Quality Assurance. The following topics will be

SWE 542 SQA/manual/auto/perf Testing (3)
Prerequisites: None
Testing of software can be done in both Automation and Manual testing method, but it totally depends on the project requirement, budget associated with the project, and which testing method will be benefited to the project. Automation Testing is a method which uses automation tools to run tests that repeat predefined actions, matches the developed program's probable and real results. Manual testing is a method used by software developers to run tests manually. This course will teach the following: Software testing concepts; Black Box Testing, White Box Testing, Integration Testing, System Testing, Unit Testing, and Acceptance Testing; and Test Management tools: QC/ALM, Defect tracking tool, Jira and automation tool, and QTP/Selenium.

SWE 544 SQA/Software Testing Tools (3)
Prerequisites: None
This course introduces the QA with test methodologies and procedures. During the course, the students go through the Manual Testing and Automation of Client/server and web based applications. The course will quickly build through each of these concepts and configuration so that by the final day of class, each student will have fully tested the application manually and convert manual test cases into automation scripts. In doing so, the students will focus on different aspects and become acquainted with additional functions.

SWE 546 SQA/Performance Testing (3)
Prerequisites: None
This course provides an introduction to the complexities of software performance testing and delivers testing skills that participants can immediately apply back on the job. The following topics will be addressed: understand the performance testing process: planning, preparation, execution, and reporting; relate performance testing to the development process; understand performance goals and objectives; learn how to deal with environment and architecture issues; define operational profiles and load definitions; understand and select the various types of performance tests; and define and select appropriate measurements.

SWE 550 Software Project Management (CPO-ACP) (3)
Prerequisites: None
This course provides an overview of software project management history, culture, methodologies, leadership, and strategic planning. The course introduces important tools, such as work breakdown structure, scheduling, earned value analysis, and risk management. Case studies from a variety of organizational settings are discussed. The course discusses the 5 processes that must be done for traditional project management success: (Define, Organize, Execute, Control, and Close) and Complex Project Management (Agile PM and Extreme PM). The strategic implications of projects will be considered with respect to the organizational vision. The course follows the Project Management Body of Knowledge (PMBOK) of the Project Management Institute (PMI) and allows the students to prepare for the examinations for the Agile Certified Practitioner ACP. The course focuses on the concepts and tools of the different software project management elements. It first sets the software project management framework and describes the different steps in the software project management process. Next, all the key management aspects of a software project are addressed: integration, scope, time, cost, quality, human resources, communications, risk, procurement, and stakeholder.

SWE 560 Principles of Database Systems (3)
Prerequisites: None
This is an advance level course on the principles of database systems. Main topics include, but are not limited to: an overview of the relational data model and relational query languages; recursive queries, datalog, and fixed-points; query processing and optimization; database design, dependencies, normal forms, and the chase procedure. Additional topics may include: information integration, complex objects, semistructured data, and XML.

SWE 561 Cloud Computing (3)
Prerequisites: None
Recommended: Knowledge of Operating Systems
Introduction to cloud computing, cloud architecture and service models, the economics and benefits of cloud computing, horizontal/vertical scaling, thin client, multimedia content distribution, multiprocessor and virtualization, distributed storage, security and federation / presence/ identity/ privacy in cloud computing, disaster recovery, free cloud services and open source software, and example commercial cloud services.

SWE 562 Oracle Database Management/Administration (3)
Prerequisites: None
This course introduces Oracle as a practical example of a widely used database system, teaches basic database concepts, data definition and manipulation languages (SQL), general architecture of database management systems, transaction management, concurrency control, security, distribution, and query optimization.

SWE 570 INTERNET OF THINGS ARCHITECTURE AND SECURITY (3)
Prerequisites: None
The objective of the course is to introduce students to the principles, technology and applications of the Internet of Things (IoT). The course includes a coverage of the key principles and building blocks of IoT (architecture), the key enabling technologies (devices, networking and management), and the issues of security of the IoT systems. At the end of this course the student would be able to describe the key IoT technologies in detail, explain issues in developing large-scale IoT systems, explain applications of IoT
and demonstrate a deep understanding of at least one IoT research topic.

SWE 600 ADVANCED SOFTWARE ENGINEERING (3)
Prerequisites: SWE 500
This class goes into greater depth in learning the practices and principles of software engineering. The course also includes a brief review of some of the material from SWE 500. In this course, we expand our understanding of software modeling to include real time, concurrency, and embedded systems software engineering. It also goes into more depth in software metrics, project estimation techniques, risk management, software reliability, new and emerging directions for software development. This is also a team-oriented capstone project course, and one of the deliverables at the end of the semester is a fully-formed, professional level software design from the project team.

SWE 602 SOFTWARE REQUIREMENTS ELICITATION (3)
Prerequisites: SWE 500
Requirements Elicitation is the process of identifying the real problems that the software stakeholder tries to solve, of defining a system and its technical environment, and of identifying the requirements of that system such that it solves these problems for users, customers and other stakeholders. The objective of the class is to prepare software engineers for the task of developing effective requirements under a variety of development modalities. The student, at the conclusion of this course, will understand requirements engineering for Waterfall, V-Model, Spiral Model, Agile Methods, Cleanroom Engineering, the [Rational] Unified Process, as well as other approaches. The student will also understand, and gain experience with, the Unified Modeling Language, including use cases and other facilities of UML. Finally, it will introduce the student to the concepts necessary to moving from requirements to architecture, to design, to implementation. This is not a design or programming course, but an understanding of the principles and practices of software engineering are essential for the software requirements engineer. (Including currying, pattern matching, lazy evaluation, tail recursion, immutability, etc.)

SWE 632 Software Risk Management (3)
Prerequisites: None
This course introduces the field of software risk management which includes the software estimation, planning and control process. Risk management in software includes critical factors that impact estimates, methods for selecting metrics and measures, proper software sizing, as well as processes that identify and manage risks in the software development process as well as the operational phase of the software life cycle. Risk management and software estimation and measurement, when used properly in the software engineering context expedite the software estimation process, help generate more accurate estimates, and contribute to safe and resilient software engineering projects. Risk techniques also mitigate safety and security issues and form a total software success paradigm for software development projects.

SWE 633 Software Refactoring (3)
Prerequisites: SWE 500
Software Refactoring is a change made to the internal structure of software to make it easier to understand and cheaper to modify without changing its observable behavior (Fowler 1999). Improving the design of existing code. Various techniques and refactoring patterns. Increasing software understandability and productivity, reducing software complexity, aging, and maintenance costs. Refactoring in the context of agile development, during debugging and code review. Refactoring tools for important languages and OSs. Various categories of refactoring, small and big refactoring. Refactoring of UML design models.

SWE 680 Software Architecture (3)
Prerequisites: SWE 600
Every computer software system has an architecture, even if it is an ad hoc architecture. Modern software systems are larger, include more interoperability of their components, and often involve many programmers and engineers, working together to achieve a predictable design. When there is no coherent architecture for the design, the engineers and programmers often find themselves working at cross-purposes, constantly reworking their product to satisfy previously undefined requirements. This class is focused on the high-level concern of the architecture of a software system. Therefore, we will not be doing any computer programming. The course interests will include the requirements development, system context, and relationships between the various components and structures in a software architecture. At the end of this course students will be prepared to participate in a software (or systems) engineering project at the high level of development where they design the fundamental architecture for that system. Students will understand requirements development, project strategies and tactics, patterns of architecture, and architectural styles and idioms.

SWE 688 SPECIAL TOPICS (1-3)
Prerequisites: None
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline.

SWE 689 INDEPENDENT STUDY (1-3)
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

SWE 690 Capstone Project (3)
Prerequisites: Department Chair approval and completion of 27 hours of the MSSE program.
The capstone project is a report, analysis, software project, or program, submitted by a graduate student. It is designed to demonstrate the in-depth learning and higher-order-thinking of the student. It is meant to be an analysis of knowledge, breaking information down according to the analytical
strength of the student's thinking as well as synthesis of knowledge and assembling the parts into a new coherent whole.

SWE 695 Master's Thesis (3-6)
Prerequisites: Department Chair approval and completion of 27 credit hours of the MSSE program.
The master's thesis must be arranged with the master's thesis advisor. After the topic is approved independent research in software engineering toward the MS degree must be conducted. The research must result in some new insights into the academic or practical concepts of the SE world. These must be analyzed, explained, and documented in the thesis. After completing the thesis, the student must defend it before a committee of faculty appointed by the Department Chair.

Classroom Field Learning (CFL)

CFL 591 INTEGRATING ACADEMIC & INTERNSHIP LEARNING (2)
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591 (can be taken concurrently) in order to be eligible to enroll in INT 593.

Internship (INT)

INT 593 P/F INTERNSHIP (1, 3)
Prerequisites: CFL 591
This course consists of participation in a full-time or part-time internship experience, related to the student's field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A maximum of 10 credit hours earned in INT 593 may be applied toward the Master's Degree graduation requirements.

FACULTY

» Cornel Pokorny, PhD Engineering Sciences, Technical University Vienna, Department Chair
» Ahmed Ezzat, PhD Electrical and Computer Engineering, University of New Hampshire. Assistant Department Chair

CORE FACULTY

» Xiaoshu Qian, PhD. Electrical Engineering, Univ. of Rhode Island, M.S. Computer Science, Univ. of Rhode Island
» Richard Sun, PhD Computer Science, University of Illinois
» Ming Hwa Wang, PhD Computer Science, Illinois Institute of Technology

ADJUNCT FACULTY

» Qamar Asghar, MS Mechanical Engineering, University of Tennessee
» Ahmed Ben Ayed, PhD Computer Science, Colorado Technical University
» Mar Castro, MS Software Engineering, Cal State Fullerton
» Tushar Chandra, MSCS & Engineering, Arizona State University
» Arijit Das, MS Computer Science, Oregon State University
» Donna Dulo, JD, MS Computer Science, Naval Postgraduate School
» Patricia Hoffman, PhD Applied Mathematics, UC Santa Cruz
» Dongming Liang, PhD Computer Science, York University
» Dick Liu, PhD EE Computer Systems Laboratory, Stanford University, MS Computer Science, Pennsylvania State University
» Leandro Loss, PhD Computer Science, University of Nevada
» Srinivasan Mandyam, PhD Computer Science, Indian Institute of Science
» Tony Nguyen, MS Computer Science, Santa Clara University
» Da-Qi Ren, PhD Computer Engineering, Concordia University Montreal
» Richard Riehle, PhD Software Engineering, Naval Postgraduate School
» Zhupei Shi, PhD Physics, New York University
» Gurminder Singh, PhD Computer Science, University of Alberta, Canada
» Jeremy Tzeng, PhD EECS, UC Berkeley
» Alex Wu, PhD Mechanical Engineering, UC San Diego
» Yurong Xu, PhD Computer Science, Dartmouth College
» Victor Yu, MA Geographical Information System, University of Akron, BS Computer Science, Franklin University, Adjunct Faculty
» Fang Yuan, PhD Applied Statistics, University of
Alabama
» Matt Zhang, PhD Computer Science, North Carolina State University
The pace of technology, innovation and creativity is constantly on the rise calling for increasing demands for new methods of learning and curriculum. The ITU Digital Arts Department strives to fulfill this need by being open and proactive in integrating the latest technologies and ideas with the most timeless fundamentals of art and science. We constantly encourage and engage in regular dialogue between our faculty, students and industry in order to ensure our program nurtures the world’s most creative innovators and leaders in the field of digital arts.

1. Problem Solving: Construct, interpret, analyze, and evaluate information and ideas derived from a multitude of sources in order to reach reasoned solutions or alternative strategies to solve problems.
2. Critical Thinking: Analyze facts and information from multiple sources in order to assess the relevance and synthesize that information in order to formulate meaningful arguments and conclusions.
3. Communication: Interact clearly and effectively in written and oral forms with personal and professional constituencies.
4. Team Work: Operate collaboratively and respectfully as members and leaders of diverse teams and organizations.
5. Technical Literacy: Work responsibly, appropriately and effectively, using technology tools to access, manage, integrate, evaluate, create and communicate information and innovation.
6. Research: Identify and implement systematic methodologies for discovering, understanding, analyzing and interpreting materials, information and behaviors.
7. Responsibility: Practice sound, ethical, and social responsibility in professional and personal endeavors and decision-making.

Master Of Science In Digital Arts In a world of smartphones, tablets, wearable computers, and Virtual Reality (VR) and Augmented Reality (AR), the role of a digital artist is more important than ever. Not only is there an insatiable appetite for new content, but also the skills demanded from a designer, storyteller and artist to create that content has extended far beyond traditional skill-sets. An infinite number of opportunities await those with the proper abilities and imagination.

ITU’s Digital Arts (DA) program is taught by experienced industry professionals who integrate design fundamentals, professional skills and entrepreneurial innovation into a unique program tailored to the modern artist who dares to innovate and create their own vision of the future. Students will learn to produce live action, interactive and augmented media. The program prepares students to become leaders in digital art production, advertising, film, gaming, AR, VR, mobile and app industries. Graduates of this program will build multimedia portfolios with thesis papers designed for peer-reviewed publications in academic and industrial journals. The Digital Arts program requires successful completion of 36 credit hours. The program offers concentrations in different disciplines. Concentration and elective courses provide flexibility in customizing the program to meet professional and personal goals.

Program Learning Outcomes (PLOS) All PLOS are mapped to the relevant ILOs and contained within parentheses. Upon completion of this program, graduates will:

PLO #1: Apply foundational digital production skills to create stories, visualizations and designs. (Mapped to ILO #1: Problem Solving.)

PLO #2: Create professional grade digital productions by utilizing general production pipelines from conception to production, marketing and distribution. (Mapped to ILO #5: Technical Literacy.)

PLO #3: Analyze products and situations to effectively articulate and identify opportunities for innovation and experimentation in art, design and product development. (Mapped to ILO #3: Communication literacy and ILO #2: Critical Thinking.)

PLO #4: Apply collaborative skills and evaluate team dynamics to successfully complete team-oriented master digital art projects. (Mapped to ILO #4: Collaboration and Teamwork.)

PLO #5: Apply understanding of software, hardware and the production process to identify appropriate industry standards to complete digital productions. (Mapped to ILO #5: Technical Literacy and ILO #6: Research Skills and Information Literacy.)

PLO #6: Create a portfolio of projects that showcase multiple art and media skills in design, animation, filmmaking and interactive design. (Mapped to ILO #7: Individual Responsibility and ILO #5: Technical Literacy.)

ITU’s Digital Arts program can prepare a student for a career in Film, Design, Digital Marketing, Production, Interactive Media, Computer Graphics, UI/UX, Video Games, 3D Modeling and 3D Printing, Animation, Video, Audio, Photography, Augmented Reality, and Virtual Reality. REQUIRED COURSES:

» 4 Core Courses: 12 credit hours
» 1 Capstone Course: Project or Thesis: 3 credit hours
» 1 Internship: 1 credit hour

» Elective Courses: 11-20 credit hours
» Internship: 1-9 credit hours
» Cross Disciplinary Course: Up to 3 credit hours (counts as Elective)
» Transfer Credits: Up to 9 credit hours from a graduate program of a regionally accredited school

36 Total credit hours
GRADE POINT AVERAGE (GPA)
A minimum 3.0 cumulative GPA is required for granting of the Master’s and Doctoral degree.

REQUIRED CORE COURSES
» DGA 501 New Media Production
» DGA 511 General Production Pipelines
» DGA 621 Producing Digital Media
» DGA 631 Digital Media Startup

REQUIRED CAPSTONE COURSE
» DGA 690 Master’s Project
OR
» DGA 692 Master’s Thesis

UI/UX
» Production
» Digital Marketing
» Interactive Media and Games
» Mobile Design and Development

If students complete with a passing grade in the Digital Arts program concentration, they will be eligible to graduate with a Digital Arts degree in their selected concentration (e.g. Digital Arts in Production, etc.). The project or thesis topic should be on the selected concentration. If a student has declared a concentration and does not complete the required concentration courses by graduation, the student will graduate with a Digital Arts degree, with no concentration. Please note that concentrations will only appear on the transcript, and not on the diploma.

DECLARING OR CHANGING A CONCENTRATION
(FOR DIGITAL ARTS PROGRAM ONLY) Digital Arts program concentrations may be declared starting at the point of admissions. If a student does not declare a concentration during the admissions process, the student will be enrolled in the Digital Arts program. Students may add or change their Digital Arts program concentration at any point before the completion of 19 credit hours. Any approved transfer credit will be counted towards the 19 credit hours. Requests to declare or change concentrations must be made by the first day of the trimester in which the student will attempt the 20th credit hour in order to be considered. The department chair must approve any exceptions to the conditions above.

REQUIRED COURSES FOR EACH CONCENTRATION
UI/UX CONCENTRATION (9 credit hours) Students must take DGA 518 UI/UX: User Interface and User Experience and DGA 528 Dynamic UX and one (1) of the following courses:
» DGA 507 Design Fundamentals
» DGA 512 Web Graphic Design
» DGA 520 Motion Graphics

DIGITAL MARKETING CONCENTRATION (6 CREDIT HOURS)
Students must take DGA 523 Social Network Marketing and Publishing and one (1) of the following courses:
» MKT 585 International Marketing
» MKT 590 Marketing with Social Media
» MKT 551 Competitive Marketing Strategies

PRODUCTION CONCENTRATION (9 CREDIT HOURS)
Students must take all of the following courses:
» DGA 526 Screenwriting
» DGA 527 Production
» DGA 522 Editing I
» DGA 520 Motion Graphics

INTERACTIVE MEDIA AND GAMES CONCENTRATION (9 CREDIT HOURS)
Students must take DGA 508 CG Software Fundamentals and an additional two (2) of the following courses:
» DGA 524 Virtual Reality/Augmented Reality
» DGA 529 Introduction to Games programming Unity, SpriteKit using C#, and Swift
» DGA 511 Unity 2D/3D Game Development Platform
» DGA 510 Intro to Game Development
» DGA 609 3D Modeling and 3D Printing
» DGA 520 Motion Graphics

ELECTIVE COURSES
Electives from the MSDA curriculum must be chosen so that the total number of credit hours completed is at least 36.
» DGA 503 Storyboard Design
» DGA 504 Global Storytelling
» DGA 507 Design Fundamentals
» DGA 508 CG Software Fundamentals
» DGA 509 Basic Image Manipulation
» DGA 510 Intro to Game Development
» DGA 512 Web Graphic Design
» DGA 513 Documentary Production
» DGA 515 Sound Design
» DGA 516 Production Sound Recording
» DGA 517 Post Production Sound Recording
» DGA 518 UI/UX: User Interfaces and User Experiences
» DGA 519 Still Life and Figure Drawing
» DGA 520 Motion Graphics
» DGA 521 Digital Media Distribution
» DGA 522 Editing I
» DGA 523 Social Network Marketing and Publishing
» DGA 524 Virtual Reality/Augmented Reality
» DGA 526 Screenwriting
» DGA 527 Production
» DGA 528 Dynamic UX
» DGA 529 Introduction to Games Programming Unity, SpriteKit using C#, and Swift
» DGA 531 Beginning Augmented Reality
» DGA 532 Beginning Virtual Reality
Course Descriptions

DGA 501 NEW MEDIA PRODUCTION (3)
Prerequisites: None
An introduction to digital media production, it provides design theory and hands-on experience. The course will cover basic principles of graphic and interface design, which will be applied to the course deliverables, including print, web, mobile, and video productions. Students will also learn about the big picture of project development, including vital skills such as scheduling, budgeting, creating and working within deadlines, and operating in a team-based environment.

DGA 503 STORYBOARD DESIGN (3)
Prerequisites: None
Today, Storyboard use is not exclusive to the narrative forms of Film and Animation, but is also widely used in the design of Video Games, Interactive GUI’s, Product Presentations and more. Using stories, designs and flowcharts from actual productions, this course will show students of any drawing skill level an overview of how to effectively design and construct storyboards from thumbnails to presentation layouts.

DGA 504 GLOBAL STORYTELLING (3)
Prerequisites: None
In a world where the noise of mass and personal communications can overwhelm any message and idea, the role of storytellers who can tell inspiring, persuasive stories and is more important than ever. This course will demonstrate how to apply the universal heroes’ journey in a way that transcends global cultures and civilizations.

Students will explore the universal communication tool known as “stories” from its traditional forms such as fairytales, folklore and mythology through today’s digital, augmented transmedia as a means of entertainment, education and communication.

DGA 507 DESIGN FUNDAMENTALS (3)
Prerequisites: None
This course blends classical visual language fundamentals with project-based design learning applicable to the media and tech industries.
Students will learn how to apply core principles of typography, color, and composition to digital products. The emphasis of the course on design 98 methodologies in both theory and practice are instrumental in improving design performance, problem solving skills, and making students into better designers. Course projects will enable students to build a portfolio of digital design solutions across mobile, web, games or film.

DGA 508 CG SOFTWARE FUNDAMENTALS (3)
Prerequisites: None
This course will provide an overview of the computer graphics process utilized today in print, commercials, games, television and movies. The course will offer the student a hands-on tutorial covering modeling, rendering, lighting, animation and compositing. Students will get to construct a 3D model and take it through all phases of the computer graphic process culminating in a finished scene realistically compositied into a 2D background. Other subjects covered include principles of rigging, animation, motion tracking and camera moves with examples provided. Lab fees may apply.

DGA 509 BASIC IMAGE MANIPULATION (3)
Prerequisites: None
In this modern digital age, the basic principles of photography have not changed. But the tools and techniques of how we arrive at our final image continue to evolve. This class will introduce students to the principles of photography and then explore the tools and aesthetics employed by professionals and amateurs alike to alter or enhance their images. Techniques and skills acquired will then be applied to projects. This class will require a laptop or tablet that can handle the specifications of the software Adobe Photoshop.

DGA 510 INTRO TO GAME DEVELOPMENT (3)
Prerequisites: None
What are the different elements to a game? What makes a great game? Computer game development requires all facets of Computer Science, including Computer Graphics, Artificial Intelligence, Algorithms, Data Structures, Networking, and Human-Computer Interaction. It also requires knowledge of other disciplines including Economics, Mathematics, Physics, and Psychology. The value of this course goes beyond culminating Computer Science. It is largely a hands-on course where real-world skills including design, teamwork, management, documentation, and communications are critical. This course will delve into topics such as the game engine, rendering, user interfaces, sound, animation, and game hacking. This course will also cover designing MMORPGs and mobile games.

DGA 511 GENERAL PRODUCTION PIPELINES (3)
Prerequisites: None
This course covers the general procedures and methodologies to produce a production pipeline from start to finish. One will be lead through the production process breaking down each phase in a step-by-step fashion and will be introduced to easily applied principles of scheduling each task. Students will learn to apply these principles to breakdown and schedule in either real-time rendering projects — such as a video game or image rendered projects — from animated shorts to features.

DGA 512 WEB GRAPHIC DESIGN (3)
Prerequisites: None
This course provides students with instruction in graphic editing software. Projects will use tools, layers and filters to design, edit and create digital images for the Web, apps and digital and interactive media. Topics covered will include: Basic Web design tenets, Using color effectively, Understanding fonts, Designing navigation, Creating graphics that don’t distract from your site, and Using multimedia (sound, animation, and other media) on your site.

DGA 513 DOCUMENTARY PRODUCTION (3)
Prerequisites: None
This course is designed to introduce students to a complete beginning-to-end production process, with the goal of creating a class documentary project. Students will learn every step required to produce and create a finished film, including preproduction planning, camera operation and shooting, lighting, interview techniques, storytelling strategies, editing, motion graphics, and more. An understanding of these tools and procedures are essential for any student who wishes to work in film, or who desires to produce compelling narrative content in a variety of media.

DGA 515 SOUND DESIGN (3)
Prerequisites: None
This course provides an introduction to sound design principles for multimedia in a broad and diverse manner. Students will develop skills in recording, digital editing and mixing with industry standard software and techniques.

DGA 516 PRODUCTION SOUND RECORDING (3)
Prerequisites: None
This course is designed to acquaint and introduce students to the basic principles of audio recording and production through classroom lecture, and hands on training, as well as guided and individual studio projects. Students will learn recording techniques, including the choice of microphones and their placement, as well as mixing multi-track audio utilizing equalization, compression, reverb, and panning, with an emphasis on acoustics and the physics of sound. Class projects will focus on recording audio for distribution within, TV, radio, computer gaming, and film. Students will attend lectures and gain experience in production as they complete the projects assigned in the course.

DGA 517 POST PRODUCTION SOUND RECORDING (3)
Prerequisites: None
This course will teach students the specific techniques and strategies used during the audio post-production process. Students will learn how to spot, edit, and assemble dialogue, sound effects, Foley, and music, in addition to mixing and prepping the audio using the industry standard, Pro Tools and other DAW technologies. The course begins with a real-world overview of audio post production, including its evolution, methods, sound crew, and media formats. It then explores techniques and tips for recording location sound, using sound effects libraries, editing production dialogue, and directing and recording a Foley session. Students will learn strategies for working with composers and music supervisors, how to edit songs to fit a scene, and how to record and mix score music. In addition, students will learn how to assemble a predub or temp mix (to group and sub-mix tracks into stems for the final dub), create the final dub, and prepare the mix for foreign distribution and final delivery.

DGA 518 UI/UX: USER INTERFACES AND USER EXPERIENCES (3)
Prerequisites: None
This course offers students an engaging introduction and hands-on practice in the fundamental areas of human centered user experience (UX) design. This course will explore design-thinking strategies ranging from behavioral psychology basics to techniques for user research, design ideation, rapid prototyping and usability evaluations. Students will learn how to gather and translate user needs into clear and responsive user interface (UI) solutions. Students will demonstrate their creative problem solving skills by building a design portfolio across a range of UX / UI projects throughout the course.

DGA 519 STILL LIFE AND FIGURE DRAWING (3)
Prerequisites: None
Digital Art calls on a variety of disciplines beyond proficiency with particular software. There are basic skills and techniques that bring creative ideas to strong, visual presentation. Still-life and Figure drawing are foundations on which most visual expression is built. In a series of sessions using both the Human Figure and Inanimate Objects, learn
drawing techniques to capture form, light and shadow, perspective and composition.

DGA 520 MOTION GRAPHICS (3)
Prerequisites: None
This course will explore the fundamental principles of motion graphics, which blend art and technology to create dynamic visuals for the screen. Students will become familiar with the processes of creating effective animated graphics, suitable for broadcast, films, titles, or commercials. One will learn to create engaging visual imagery, generate unique ideas, and to apply color palettes that support a concept. This course will teach students advanced techniques of motion-graphics creation through the use of software programs utilized by design and animation companies worldwide.

DGA 521 DIGITAL MEDIA DISTRIBUTION (3)
Prerequisites: None
The business of media is distribution. It is the art and method of maximizing profits in the delivery and consumption of your work. But the business model and methods of media distribution now change and evolve at ever increasing rates. This course will expose students to industry concepts of networks, life-cycles, ultimates and windows, as well as how those concepts apply to new media such as VOD, apps, tablets, clouds and beyond. Upon completion, students will have an understanding of media business model fundamentals and be prepared to position themselves at the vanguard of the rapidly changing world of digital media distribution.

DGA 522 EDITING I (3)
Prerequisites: None
This course offers students an in-depth understanding of editing principles is one of the core competencies of cinematic storytelling for movies, television, video games, advertising, animation and new media. Logical, intelligent editing is essential for clearly communicating story information and making video greater than the sum of its parts. The theory, practice, history, and techniques of editing will be covered in this comprehensive overview. Students will explore the art and function of editing the moving image for narrative, documentary, and non-traditional web material through an introduction to industry leading non-linear editing systems.

DGA 523 SOCIAL NETWORK MARKETING AND PUBLISHING (3)
Prerequisites: None
In the vast sea of opportunities offered by today’s technology and networks, how can you most effectively use social media to achieve your career goals? Many traditional forms of media and networking are simply not enough to reach and captivate today’s media savvy audience. To successfully reach your online and offline audiences you must fully utilize creative, problem solving, design and communication skills. This class will explore established concepts of personal narrowing, blogs and tweets as well as modern takes on subjects such as data visualization and vanity metrics vs. validated learning. Finally, all of these concepts and skills will be applied utilizing affordable and accessible digital publishing tools to deliver the latest apps and media.

DGA 524 VIRTUAL REALITY/AUGMENTED REALITY (3)
Prerequisites: None
This course focuses on the design and evaluation of Augmented Reality (AR) and Virtual Reality (VR) systems, algorithms, and applications related to the hardware, software, interaction, psychology, technology, and research that are used. Class topics will include systems for presenting information to all five senses (visual, auditory, haptic, olfactory and gustatory), methods for users to interact with objects within virtual environments, and evaluation techniques for assessing effectiveness, as well as vision-based marker and feature tracking, model-to-view space transformations, mobile application development, and interaction techniques. Students will interact with various display and interface 100 devices throughout this course, develop prototype applications, and evaluate them. Through a combination of traditional lecture, literature review, and hands-on work, students will learn to critically evaluate different alternatives, build prototype systems, and design comparative evaluations to test the effectiveness of various (AR) and (VR) applications.

DGA 526 SCREENWRITING (3)
Prerequisites: None
Screenwriting is the foundation of cinematic storytelling, and is also a primary tool for animation and video game development. This class will teach students the fundamentals of compelling plots and great drama, the nuances of realistic character development, tips and tricks for writing visually compelling scenes, and how to make your dialog jump off the page. Through story analysis and writing exercises, students will learn to take apart any story to see what makes it work, and will author their own short screenplays all the way from idea to finished script.

DGA 527 PRODUCTION (3)
Prerequisites: None
This course is designed to introduce students to a complete beginning-to-end production process, with the goal of creating a class project. Students will learn every step required to produce and create a finished film, including pre-production planning, camera operation and shooting, lighting, interview techniques, storytelling strategies, editing, motion graphics, and more. An understanding of these tools and procedures are essential for any student who wishes to work in film, or who desires to produce compelling narrative content in a variety of media.

DGA 528 DYNAMIC UX (3)
Prerequisites: None
This course will explore how web technologies are making it easier for websites to become more interactive and behave more like native applications. Students will learn to identify and improve static web designs through the use of dynamic
DGA 529 INTRODUCTION TO GAMES
PROGRAMMING UNITY, SPRITEKIT USING C#, AND SWIFT (3)
Prerequisites: None
Learn to code in Swift Apple’s new coding language. Learn to make apps in Xcode and learn how to make games with SpriteKit. The course is step by step and project-based, so you will learn programming Swift and C# concepts and apply them immediately to real indie games as you go. • Build an entire game yourself • Step by step in class • Learn Swift and C# • Learn Sprite kit and Unity Requirements: Students must have knowledge of programming in Java, C, C++ or equivalent, course might requires a MAC computer for the Swift and SpriteKit loaded with latest version of Xcode.

DGA 531 BEGINNING AUGMENTED REALITY (3)
Prerequisites: None
Augmented reality, virtual reality, mixed reality... these systems can provide users with astonishingly immersive content. What are the sciences involved in this new technology, and what are the content integration issues to building these virtual places? This course focuses on the design and evaluation of Augmented Reality (AR) systems, algorithms, and applications related to the hardware, software, interaction, psychology, algorithms, technology, and research that are involved. With the proliferation of powerful, always-on, Internet-connected mobile devices such as smart-phones, tablets and newer headworn displays, sophisticated applications that combine location-specific content with the current user view are becoming more possible. Application developers for these devices require a broad set of technical and design skills to create effective interactive AR experiences. Topics will include vision-based marker and feature tracking, model-to-view space transformations, mobile application development, and AR interaction techniques. Through a combination of traditional lecture, literature review, and hands-on work, students will learn to critically evaluate different alternatives, build prototype systems, and design comparative evaluations to test the effectiveness of various AR applications. Students will be expected to implement several techniques as part of this course. This course welcomes students with a diverse set of backgrounds, including (but not restricted to): computer science, math, physics, digital art, engineering, architecture, and psychology.

DGA 532 BEGINNING VIRTUAL REALITY (3)
Prerequisites: None
During this course, students will explore the techniques and technologies that need to be brought together to allow Virtual Reality, and other realities along the Mixed Reality Continuum and organic life forms to interact within virtual worlds. Commercial displays, trackers and graphics hardware have enabled many new applications and venues, including: entertainment, training and learning activities, exercise, assessment, rehabilitation and socialization. Class topics include systems for presenting information to all five senses (visual, auditory, haptic, olfactory and gustatory), methods for users to interact with objects within virtual environments, and evaluation techniques for assessing effectiveness. Students will interact with various display and interface devices throughout this course, develop prototype applications, and evaluate them. The format of the course will be a combination of traditional lecture, literature review, and hands-on work. Because the definition and purpose of Virtual Reality is in flux and evolving rapidly, this course will be colloquium in nature, focused on synthesizing existing literature from multiple related fields and sources, in order to understand and make use of these changes to VR.

DGA 606 ANIMATION I (3)
Prerequisites: None
Students will develop an understanding of a wide variety of applications used in animation and learn the principles behind 2-D, 3-D, and motion graphics. Through an exploration of 2-D animation concepts, design and techniques, each student will become familiar with animation language and eventually garner the basics used for modeling, positioning and rendering 3-D objects using Autodesk Maya, one of the leading animation software packages for the film and gaming industries.

DGA 607 STORYBOARDS AND LAYOUTS (3)
Prerequisites: DGA 503
In this course, students will learn advanced storyboarding and the layout process as it relates to the narrative structure. Emphasis is placed on the full storyboard process from initial sketch (thumbnails) to final, sequential panels. Using supplied stories, design and flow chart examples, students will learn to apply the essentials of drawing to a production, from initial storyboard sequences to final production layouts. Through interactive lectures, discussions, demonstration and studio work, students will be able to translate narrative concepts into effective visual communications for film and video productions, animation, motion graphics, multimedia apps, video games, and theme park attractions.

DGA 608 CG MODELING (3)
Prerequisites: DGA 508
3D modeling involves digitally constructing shapes in a virtual space and is utilized in fields ranging from movies, animations, video games, architecture, medical and industrial visualizations, and a host of new applications and media such as creating virtual actors and Augmented Reality (AR). In this course, students will learn the techniques used by movie and video game industry experts to create professional 3D Models. They will use industry techniques and applications to create new worlds by designing and modeling their own objects, creatures, and environments. This class requires a laptop computer or tablet running Adobe CC Photoshop.
DGA 609 3D MODELING AND 3D PRINTING (3)
Prerequisites: DGA 508
This course instructs students in the best industry standard practices and production pipelines for creating 3D assets using Autodesk Maya, one of the leading software packages for the film and gaming industries. Students will explore the tools and techniques needed to model a wide array of characters, objects, architectures, and environments. Students will build a strong understanding of the methods and principles of 3D modeling. Aspects of the production pipeline will be covered, but the main focus will be from concept design to final sculpture. In addition to learning the basics of 3D modeling with Maya, we will be learning some basics of 3D printers, such as MakerBot Replicator 2. Students will learn the differences between printing materials, techniques to have more predictable results, limitations of current 3D printers and even will be able to print out some objects by the end of the class session!

DGA 610 RIGGING FOR 3D ANIMATION (3)
Prerequisites: DGA 508
This course introduces the basic techniques of character set-up and rigging as used in 3D animation. This course will cover such principles and skills as how to set up a skeleton for an animated character, joint hierarchies, forward kinematics, inverse kinematics, constraints, and how to create facial rigs and blendshapes for facial animation.

DGA 611 LIGHTING AND COMPOSITING (3)
Prerequisites: DGA 508
This course covers the art and science of lighting, shading, and compositing to create computer graphics images (CGI). The lighting and shading portion of the course investigates the look, shading, and atmosphere techniques that brings characters and scenes to life. The compositing portion of the course focuses on the integration of CGI elements with live action footage. The course begins with introduction to the history of photographic lighting and compositing and ends with students learning to create and integrate their own CGI elements through both individual and team based projects.

DGA 612 CONCEPT ART AND STORYBOARDING (3)
Prerequisites: DGA 503
A critical phase for cinema pre-production is in design, planning and storyboarding. Stories unfold through concept designs that include characters, props, wardrobe, locations, sets, color palettes, and environments. No matter what the size of their cinematic project, this course will get students ready for production and a unique integrated approach to quick, realistic and aesthetic designs relevant to their story and characters. Students will learn to generate preproduction material from concept illustrations and character designs to color studies, storyboards and wardrobe designs.

DGA 615 ZBRUSH (3)
Prerequisites: DGA 608
ZBrush is a very powerful 3D sculpting and texturing tool. The course covers the most popular tools and techniques for digital painting and sculpting in ZBrush, and explains how to export the models and texture maps to other programs for use in games, film, fine art, or 3D printing. The course also highlights the new features in ZBrush 4, such as ShadowBox, clip brushes, and LightBox. Exercise files are included with the course. Topics include: navigating the canvas, using perspective and floor, creating a mesh with a ZSketch, extracting from an existing mesh, managing subdivision levels, working with alphas, masking off parts of a model, using deformation, using subtools, deforming with Transpose, painting and texturing, and creating UV maps.
Software used: ZBrush and/or Photoshop.

DGA 617 MOTION CAPTURE (3)
Prerequisites: DGA 610
Motion capture, often called mocap, is the process of digitizing a performance from an actor or animal. It is commonly used for reference or a method to get animation data quickly. This course will cover topics such as: skeletal rigs, animation retargeting, data cleanup, and on set preparation.
Software used: Maya and or Motion Builder.

DGA 621 PRODUCING DIGITAL MEDIA (3)
Prerequisites: None
The skills necessary to produce today’s media are more demanding than ever. Whether it is movies, games, motion graphics, interactive apps and other new media, this class will help students apply universal business production processes essential to take a media project from concept to completion. Topics covered in this course include concept and story development, pre-visualization, bidding, financing, scheduling, talent and asset management, and distribution.

DGA 622 EDITING II (3)
Prerequisite: DGA 522
The techniques learned in Editing 1 are now applied to the creation of short videos. Students will write and plan short narratives, shoot these projects with basic video cameras, then assemble their work using editing software. The class will cover the technical foundations of nonlinear editing and its software, and provide an introduction to image adjustment tools such as digital mattes, color correction, time remapping (slow and fast motion), title generators, and motion graphics. Video compression and codecs will also be covered.

DGA 626 ANIMATION II (3)
Prerequisites: DGA 606
Using principles introduced in DGA 606 Animation 1, this class offers more advanced and detailed explorations into animation concepts, techniques and processes including acting, gesture, storytelling, 2-D and 3-D forms, software proficiency and project management from concept through to completion of an animated project. This will lead to final projects where students will work individually and with others to complete an animated project which be included in
DGA 631 DIGITAL MEDIA STARTUP (3)
Prerequisites: DGA 511
The state of innovation sets the tone, direction and growth of jobs and entire new industries. The heart of new and innovative ideas is the modern start-up. Master the creative, technical and business skills required to conceive and create one’s own disruptive idea, then launch it into a new startup. This is project-driven and can be a companion class to the Digital Arts Master Project where students conceive and produce a project from their own original ideas and designs.

DGA 641 AUGMENTED REALITY DESIGN AND PRODUCTION (3)
Prerequisites: DGA 524 and DGA 508 A Journeyman Level course that gives students an opportunity to learn about Mixed Reality and a specific subclass referred to as Augmented Reality as a technology, a human computer interaction paradigm, and an electronic medium. Today’s powerful, always on, Internet-connected mobile devices, wearables and newer head-worn displays, require sophisticated applications and content that combine location specific information with the current user view. Application developers for these devices require a broad set of technical and design skills to create these effective interactive AR experiences. Students will work individually and in teams to explore the potential of AR. Students with backgrounds in visual design, industrial design, architecture, video production, and visual storytelling are welcome, as are students with significant programming, HCI or computer graphics backgrounds. Through a combination of traditional lecture, literature review, and hands on work, students will learn to critically evaluate different alternatives, build prototype systems, and design comparative evaluations to test the effectiveness of various AR applications. Students will be expected to implement several techniques as part of this course.

DGA 642 VIRTUAL REALITY DESIGN AND PRODUCTION (3)
Prerequisites: DGA 508 and DGA 524
Virtual Reality Design and Production is a Journeyman Level course designed to instruct students the fundamentals of Virtual Reality content design and production. Course content will focus on digital story development, methodology, technical skills and the software proficiency necessary to create deeply immersive, multisensory, interactive experiences. Through a combination of lectures, class discussion, hands on experience, in depth topic presentations, and readings from current industry relevant literature, students will be exposed to a wide range of interesting and exciting research in the broadly defined field of virtual reality, 3Duser interaction and spatial user interfaces. Students will have the opportunity to conduct a semester-long term project, working hands on with leading edge virtual reality hardware such as the Oculus Rift virtual reality headset, the Oculus /Samsung Gear VR wireless headset, Google Cardboard phone based viewers, and the HTC Vive.

DGA 661 UNITY 2D/3D GAME DEVELOPMENT PLATFORM (3)
Prerequisites: DGA 508
Many of today’s games were created using a game engine, such as Crytek, Unreal Engine, Unity or even a proprietary one written in house. These game engines provide many built in functionalities that aid in the game making process. This course will teach you how to make games from your own assets (3D models, textures, and character rigs). Student will also be writing their own C# scripts. Software: Maya, Photoshop and Unity.

DGA 688 SPECIAL TOPICS (1-3)
Prerequisites: None
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline.

DGA 689 INDEPENDENT STUDY (1-3)
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

DGA 690 MASTER’S PROJECT I (3)
Prerequisites: Approval from a faculty advisor This is a capstone project culminating in applying and demonstrating the knowledge base and skillsets acquired throughout the MSDA program and meeting all departmental Program Learning Outcomes. One is eligible for Master’s Projects only within the final two semesters prior to graduation. One will need to get approval and work closely with a faculty advisor to map out a study plan and create Student Learning Outcomes for a Master’s Project before enrolling in this capstone program.

DGA 692 MASTER’S THESIS (3) Prerequisites: Department Chair’s approval and completion of 27 credit hours of the MSDA program. The master’s thesis must be arranged with the master’s thesis advisor. After the topic is approved independent research in Digital Arts toward the MS degree must be conducted. The research must result in some new insights into the academic or practical concepts of the Digital Arts world. These must be analyzed, explained, and documented in the thesis. After completing the thesis the student must defend it before a committee of faculty appointed by the Department Chair.

CFL 591 INTEGRATING ACADEMIC AND INTERNSHIP LEARNING (2)
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how
to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591 (can be taken concurrently) in order to be eligible to enroll in INT 593.

INT 593 Part-time/Full-time
INTERNERSHIP (1, 3)
Prerequisites: CFL 591
This course consists of participation in a full-time or part-time internship experience, related to the student’s field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A maximum of 10 credit hours earned in INT 593 may be applied toward the Master’s Degree graduation requirements.

Faculty
- Jake Wachtel, MS, USC Annenberg School for Communication and Journalism, Digital Social Media, Award-winning Producer and Journalist, Department Chair

CORE FACULTY
- Dave Lo, BFA, Academy of Art University, Computer Arts, BS, Georgia Institute of Technology, Computer Science, Motion Picture Computer Artist

ADJUNCT FACULTY
- Jonali Bhattacharyya, MFA, Academy of Art University, Animation and Visual Effects; Digital Art professional, Game Animator and award-winning Educator & Creative Director
- Gokce Kasikci, MFA, San Diego State University, Multimedia, Art Director, Computer Graphics Design, Graphic Artist, UI/UX Designer, Web Designer
- Chris Petrocchi, BS, San Jose State University, Animator, Concept Artist and Art Director in television, games and film
- Tom Rubalcava, Designer, Director, Animator and Storyboard Artist in film, television, and commercials
- Koji Steven Sakai, Masters, Professional Writing, USC, Screenwriter, Producer, Novelist and Journalist
- Shanan L. Sabin, MBA, USC Marshall School of Business, Marketing, Award-winning Marketing Leader, Expertise in Integrated Campaigns, Global Market and Brand Strategy
- Michael Snyder, Journalist, Editor, Broadcaster, Educator, Screenwriter, and Animation Developer
- Allen White, Filmmaker, Screenwriter, and Film Journalist
The Department of Electrical and Computer Engineering at ITU was established in 1994. ITU’s founder, Dr. Shu-Park Chan, was also the EECE Department’s first Chair. Dr. May Huang assumed the role of Department Chair when Dr. Chan retired in 2008.

The EECE Department offers Masters’ degrees in Computer Engineering (MSCE), Electrical Engineering (MSEE), Electrical and Computer Engineering (MSECE), and a Doctor of Philosophy in Electrical Engineering (PhD-EE). Beginning in Fall 2018, the EECE Department is modifying its MSECE degree program in order to bring it into compliance with standards established by the Accreditation Board for Engineering and Technology (ABET).

MISSION

The Department of Electrical and Computer Engineering strives to prepare its graduates for success in professional careers, combining the rigor of science, the power of engineering and the thrill of innovation.

1. Problem Solving: Construct, interpret, analyze, and evaluate information and ideas derived from a multitude of sources in order to reach reasoned solutions or alternative strategies to solve problems.
2. Critical Thinking: Analyze facts and information from multiple sources in order to assess the relevance and synthesize that information in order to formulate meaningful arguments and conclusions.
3. Communication: Interact clearly and effectively in written and oral forms with personal and professional constituencies.
4. Team Work: Operate collaboratively and respectfully as members and leaders of diverse teams and organizations.
5. Technical Literacy: Work responsibly, appropriately and effectively, using technology tools to access, manage, integrate, evaluate, create and communicate information and innovation.
6. Research: Identify and implement systematic methodologies for discovering, understanding, analyzing and interpreting materials, information and behaviors.
7. Responsibility: Practice sound, ethical, and social responsibility in professional and personal endeavors and decision-making.

The MSCE Program emphasizes system design, architectures, algorithms, and the development and application of intelligent systems. The MSCE program prepares students for professional careers in industry, research or education.

Program Learning Outcomes (PLO)
The Program Learning Outcomes (PLO) define the educational outcomes of the MSCE degree program:

PLO 1: Fundamentals: (ILO 5) Outline up-to-date technologies in computer engineering
PLO 2: Engineering Ability: (ILO 1) Demonstrate an understanding of established and emerging engineering techniques, and problem-solving skills
PLO 3: Research Ability: (ILO 6) Solve problems in engineering through self-learning and research activities
PLO 4: Career Responsibility: (ILO 7) Apply professional ethics in the definition, planning, and execution of engineering projects
PLO 5: Critical Thinking: (ILO 2) Analyze engineering challenges to make evidence-based choices among various paradigms
PLO 6: Communication Skills: (ILO 3) Present technical issues clearly and professionally in both oral and written communications
PLO 7: Team Work: (ILO 4) Provide support for team projects in a way that promotes effective team dynamics to achieve team goals

The MSCE requires an understanding of both computer science and electrical engineering, to accommodate the dual role of computer engineers who are competent in system, algorithm, software, and hardware design.

Typical areas include: design and development of distributed systems, embedded systems, and computerized control systems; computer-aided design; FPGA development; ASIC design; and firmware development. Positions in the field include: system design engineer, system administrator, hardware designer, firmware designer, software engineer, verification engineer, test engineer, product engineer, quality-control engineer, customer support engineer, and applications engineer.
Program Requirements

REQUIRED COURSES:
» 4 Core Courses: 12 credit hours
» 1 Capstone Course: Project or Thesis: 3 credit hours
» Internship: 1 credit hour

ELECTIVE COURSES:
» Field Relevant Courses: 9 credit hours
» 1 Cross Disciplinary course from MBA, EM or DA: 3 credit hours
» Internship: 1-9 credit hours
» Transfer Credits: Up to 9 credit hours from a graduate program of a regionally accredited school with department chair’s approval.
» Any course in CE, EE, CS, SE or Math

36 Total Credit Hours

GRADE POINT AVERAGE (GPA):
A minimum 3.0 cumulative GPA is required for granting of the Master’s degree.

REQUIRED CORE COURSES

Select four from the following list:
» ECE 500 Electrical and Computer Engineering
» ECE 510 Algorithms and Data Analysis
» CEN 551 Computer Architecture
» CEN 556 Distributed Computing Systems
» EEN 511 Integrated Circuit Design
» EEN 541 Digital Signal Processing and System Analysis

CAPSTONE COURSE

Select one from the following list:
» ECE 646 Capstone Course 1 – IoT System Design
» CEN 643 Capstone Course 2 – Advanced Image Processing
» ECE 655 Capstone Course 3 - Deep Learning Engineering Projects
» CEN 698 Master Thesis I
» CEN 699 Master Thesis II

ELECTIVE COURSES

Computer Engineering Field Relevant: Minimum 3 Courses:
» AMS 510 Linear Algebra
» AMS 512 Applied Mathematics Methods
» AMS 514 Fast Fourier Transformation & Applications
» AMS 520 Optimization Techniques
» AMS 530 Numerical Analysis
» AMS 540 Discrete Mathematics
» AMS 552 Probability, Statistics and Reliability for Engineers
» AMS 722 Advanced Applied Mathematics Methods
» AMS 750 Abstract Algebra
» AMS 760 Advanced Optimization Techniques
» CEN 508 Scientific Computing
» CEN 520 Artificial Intelligence Application Development
» CEN 540 Network Security Techniques
» CEN 542 Computer Vision and Image Processing
» CEN 548 Computer Network Systems
» CEN 557 Data Science and Technology
» CEN 581 Principle of Internet of Things
» CEN 653 Challenge of Edge Device Design
» CEN 688 Special Topics in Computer Engineering
» CEN 689 Independent Study
» EEN 520 ASIC Design I
» EEN 521 AI Design Using FPGA
» EEN 525 ASIC Design II
» EEN 541 Digital Signal Processing and System Analysis
» EEN 629 System on Chip (SOC) Design
» EEN 715 Advanced Computer Architecture
» EEN 733 Advanced Computing Technology
» EEN 753 Advanced Machine Learning Engineering
» EEN 758 Advanced System Design
» EEN 766 Advanced Communication Systems
» EEN 774 Advanced Wireless Communications

OTHER ELECTIVE COURSES
» Any course in Math, MSEE, MSCE, MSSE or MSCS can be accepted as an elective course
» One cross-disciplinary course (MBA, EM or DA) can be accepted as an elective course

INTERNSHIP
» CFL 591 Integrating Academic & Internship Learning
» INT 593 Part-time/Full-time Internship

MASTER OR SCIENCE IN ELECTRICAL ENGINEERING
The Master of Science in Electrical Engineering (MSEE) degree program focuses on the following areas:

CHIP DESIGN
The MSEE concentration in Chip Design emphasizes the development of cutting-edge artificial intelligence integrated circuits (IC’s), using FPGA, ASIC, or SoC techniques. Mixedsignal (analog and digital) design, MEMS, and RF chip design are also covered.

SYSTEM DESIGN
The MSEE concentration in System Design emphasizes embedded systems, the Internet of Things (IoT), and distributed systems. Scientific computing, deep learning and neural networks, communications, algorithms and software implementations are also covered.

Program Learning Outcomes (PLO)
The Program Learning Outcomes (PLO) define the educational outcomes of the MSEE degree program:

PLO 1: Fundamentals: (ILO 5)
Explain current and emerging technologies in IC chip design or system design in electrical engineering

PLO 2: Engineering Ability: (ILO 1)
Appraise electrical engineering problems using contemporary techniques

PLO 3: Research Ability: (ILO 6)
Conduct independent research to solve challenges in electrical engineering

PLO 4: Career Responsibility: (ILO 7)
Apply professional ethics in the definition, planning, and execution of engineering projects

PLO 5: Critical Thinking: (ILO 2)
Analyze engineering challenges to make evidence-based choices among various paradigms

PLO 6: Communication Skills: (ILO 3)
Present technical issues clearly in oral and written communications

PLO 7: Team Work: (ILO 4)
Support team effort through collaboration to achieve project goals

CAREER OPPORTUNITIES
The MSEE requires an understanding not only of electrical engineering, but also computer algorithms and programming to fulfill the roles of chip design or system design engineers.

Typical career fields include: IC chip design, electronic design automation, embedded system design, computer-aided design, computerized control systems, sensor design and bioelectronics. Positions in the field include: logic design engineer, circuit design engineer, physical design engineer, verification engineer, test engineer, reliability engineer, and applications engineer.
ELECTIVE COURSES
Electrical Engineering Field Relevant: Minimum 3 courses:
» AMS 510 Linear Algebra
» AMS 512 Applied Mathematics Methods
» AMS 514 Fast Fourier Transformation & Applications
» AMS 520 Optimization Techniques
» AMS 530 Numerical Analysis
» AMS 540 Discrete Mathematics
» AMS 552 Probability, Statistics and Reliability for Engineers
» AMS 722 Advanced Applied Mathematics Methods
» AMS 750 Abstract Algebra
» AMS 760 Advanced Optimization Techniques
» CEN 508 Scientific Computing
» CEN 520 Artificial Intelligence Application Development
» CEN 540 Network Security Techniques
» CEN 542 Computer Vision and Image Processing

INTERNSHIP
» CFL 591 Integrating Academic & Internship Learning
» INT 593 Part-time/Full-time Internship

As technology advances ever more rapidly, the computer industry and society as a whole need professionals who possess a combination of electronic hardware and computer software skills. These skills should be developed in the context of modern systems to make them more practical and useful. Artificial Intelligence (AI) innovation and application, Internet of Things (IoT), and 5G wireless communications are changing many aspects of daily life, including driving, entertainment, communication, health care, and virtual and robotic assistants. These changes are creating many new engineering jobs in the fields of AI chip design, smart edge-device design, IoT system design, and intelligent system design.

The Master of Science in Electrical and Computer Engineering (MSECE) degree program will focus on the overlap of electrical engineering and computer engineering. MSECE students will study and also learn to design integrated hardware and software systems, using computer architectures, computing algorithms, IC design, distributed systems, intelligent system design and applications.

Program Learning Outcomes (PLO)
The Program Learning Outcomes (PLO) define the educational outcomes of the MSECE degree program:
PLO 1: Fundamentals: (ILO 5) Explain current and emerging technologies in computer architecture, algorithms, and hardware and software design
PLO 2: Engineering Ability: (ILO 1) Appraise integrated electrical and computer engineering problems using contemporary techniques
PLO 3: Research Ability: (ILO 6) Conduct independent research to solve challenges in electrical or computer engineering
PLO 4: Career Responsibility: (ILO 7) Apply professional ethics in the definition, planning, and execution of engineering projects
PLO 5: Critical Thinking: (ILO 2)
Analyze engineering challenges to make evidence-based choices among various paradigms
PLO 6: Communication Skills: (ILO 3)
Present technical issues clearly in oral and written communications
PLO 7: Team Work: (ILO 4)
Support team effort through collaboration to achieve project goals

ABET OUTCOMES

The ABET Graduate Student Outcomes (GSO) further describe what MSECE students are expected to know and be able to do by the time of graduation. The GSO represent skills, knowledge, and abilities a student should possess as a condition for entry into the profession upon graduation.

- **GSO 1:**
  An ability to meet the student’s individualized study plan and to reach study objectives

- **GSO 2:**
  An ability to conduct graduate-level engineering design and research

- **GSO 3:**
  An ability to communicate professionally and work effectively in a team environment

The ABET Program Educational Objectives (PEO) describe what graduates are expected to attain within the first few years after graduation.

- **PEO 1:**
  Graduates of the MSECE program solve computer and electrical engineering problems for high-tech industries, mainly in Silicon Valley

- **PEO 2:**
  Graduates perform engineering design, research and product development

- **PEO 3:**
  Graduates are effective team members or leaders

CAREER OPPORTUNITIES

The MSECE requires an understanding of both computer science and electrical engineering, to accommodate the dual role of computer engineers who are competent in system, algorithm, software, and hardware design.

Typical areas include: design and development of distributed systems, embedded systems, and computerized control systems; computer-aided design; FPGA development; ASIC design; and firmware development. Positions in the field include: system design engineer, system administrator, hardware designer, firmware designer, software engineer, verification engineer, test engineer, product engineer, quality-control engineer, customer support engineer, and applications engineer.

PROGRAM REQUIREMENTS

In addition to ITU’s university-wide admission requirements, applicants to the MSECE program must have completed a minimum of 45 semester hours of college-level engineering topics, and a minimum of 30 semester hours of college-level mathematics and basic science courses.

Faculty will assess each student after admission, and will supervise students to develop individualized study plans with specific goals.

The MSECE program requires 36 credit hours for graduation consisting of at least 15 hours of required credits and 21 hours of elective credits, including a minimum of 6 elective credit hours in field-relevant courses.

A minimum of 30 credit hours must be earned through course work. If a student is eligible to take more than 6 credit hours of Internship, and chooses to do so, the total number of credit hours required for graduation will increase accordingly.

REQUIRED CORE COURSES

Select four from the following list:

- ECE 500 Electrical and Computer Engineering
- ECE 510 Algorithms and Data Analysis
- CEN 551 Computer Architecture
- CEN 556 Distributed Computing Systems
- EEN 511 Integrated Circuit Design
- EEN 541 Digital Signal Processing and System Analysis

CAPSTONE COURSE

Select one from the following list:

- ECE 646 Capstone Course 1 – IoT System Design
- CEN 643 Capstone Course 2 – Advanced Image Processing
- EEN 627 Capstone Course 2 – Chip Design to Silicon
- ECE 655 Capstone Course 3 - Deep Learning Engineering Projects
- EEN 698 Master Thesis I
- EEN 699 Master Thesis II

ELECTIVE COURSES

Electrical Engineering Field Relevant: Minimum 3 courses:

- AMS 510 Linear Algebra
- AMS 512 Applied Mathematics Methods
- AMS 514 Fast Fourier Transformation & Applications
- AMS 520 Optimization Techniques

The Doctor of Philosophy degree in the field of Electrical Engineering (PhD-EE) is conferred by the Department of Electrical Engineering, International Technological University, in recognition of competence in the subject field and the ability to investigate engineering problems independently, resulting in an original contribution to engineering knowledge. The work for the degree consists of advanced studies in engineering, mathematics and related physical sciences; engineering research, preparation of a dissertation based on that research; a dissertation defense; and publication.

Program Learning Outcomes (PLO)
The Program Learning Outcomes (PLO) define the educational outcomes of the PhD-EE degree program:
PLO #1: Fundamentals
Formulate comprehensive solutions to problems in specialized aspects of electrical engineering. (Mapped to ILO #1, ILO #5)
PLO #2: Research Ability
Produce independent scholarly research, which contributes innovative ideas and concepts to the fields of science and/or engineering. (Mapped to ILO #2, ILO #6)
PLO #3: Career Responsibility
Perform career duties promptly, responsibly and professionally. (Mapped to ILO #7)
PLO #4: Communication
Produce clear, professional communication including for use in teaching, conferences, and publications. (Mapped to ILO #3)
PLO #5: Team Work
Manage team efforts towards an engineering and/or educational goal. (Mapped to ILO #4)

The PhD program in Electrical Engineering prepares its graduates to be professionals and leaders in the fields of electrical and computer engineering in industry, academic, research, or other sectors of society.

» 60 credit hours beyond Master’s degree including:
» 30 hours of coursework and Independent Study
» 30 hours of Doctoral Dissertation

» Passing a written qualification exam is required for admission to candidacy.
» Passing a comprehensive oral examination is required with presenting dissertation topic proposal and sufficient preparation for advanced research for the proposed dissertation topic.
» Passing a comprehensive, final oral defense examination is required to defend the PhD dissertation.
» Publication in an internationally recognized academic journal is required to complete the PhD dissertation.

Courses numbered 700 or above in the Electrical Engineering and Math courses are designed as PhD courses. Other courses may be accepted as PhD courses with the approval of the PhD advisor and chair of the EECE Department.

It is the student’s responsibility to obtain consent from a faculty member in the student’s major department to serve as his/her prospective thesis advisor upon acceptance into the PhD program. A PhD student and his/her advisor jointly develop a study plan for courses and research in a particular area, and submit to the chair of the department for approval.

Study Program And Course Work
The student is required to complete a minimum of 60 credit hours of graduate credit beyond the master's degree. Of these, 30 credit hours may be earned through course work and independent study, and up to an additional 30 credit hours through the thesis process. All thesis hours are graded on a Pass/No Pass basis. A maximum of 15 semester credit hours with grade of B or above may be transferred from other regionally accredited institutions with approval of the EECE Department Chair.

The qualification exam must be administered within two years of the date of admission for full-time students, and within three years for part-time students. The qualification exam can be retaken only once.

The qualification examination will be in written form. There will be three fields within the examination. Mathematics is a required field. The student may choose the two other fields from among the four fields listed below:

- Integrated Circuit Design
- Bioelectronics Design
- Wireless Communications
- System Design

Each field will cover at least three courses, for example:

- Integrated Circuit Design (EEN 715, EEN 717, EEN 733)
- Bioelectronics Design (EEN 717, EEN 736, EEN 739)
- Wireless Communication (EEN 749, EEN 758, EEN 774)
- System Design (EEN 733, EEN 753, EEN 758)

Whereas:
EEN 715 Advanced Computer Architecture (3 credit hours)
EEN 717 Advanced Integrated Circuit Design (3 credit hours)
EEN 733 Advanced Computing Technology (3 credit hours)

Admission To Candidacy
A student who passes the qualification examination is considered as advanced to candidacy. A PhD candidate must approach his/her PhD advisor to assist with formation of a doctoral committee.

The committee must consist of a minimum of three and a maximum of five members, including the dissertation advisor and the Department Chair. The committee must also include at least one member from outside the department, preferably from outside the University. Either the PhD advisor or Department Chair will serve as the chair of the committee.

The Doctoral Committee will review the proposed dissertation topic and recommend any necessary changes. For the candidacy to proceed, the committee must approve the topic.

Comprehensive Examination
Upon approval of the dissertation topic by the doctoral committee, the candidate shall request a comprehensive examination. The examination shall be an oral exam, the results of which demonstrate to the committee’s satisfaction sufficient preparation in depth and breadth for the necessary advanced research. The comprehensive examinations must be completed within one year of passing the qualification examination. Comprehensive examinations may be repeated only once, in whole or in part, at the discretion of the PhD advisor.

Dissertation Research
The period following the comprehensive examination is devoted to research for the dissertation, although such research may begin before the examination is completed. After the Doctoral Committee approves the research topic, the PhD candidate should begin the completion of dissertation research.

Publication
One or more refereed articles, based on the dissertation research, must be accepted for publication in an internationally recognized academic journal, such as IEEE, IEE, ACM, or other journals approved by the Doctoral Committee.

Teaching Requirement
PhD candidate must teach at least one Master level course in order to demonstrate teaching ability. The course being
taught must be completed prior to a dissertation defense.

The dissertation must be made available to all examiners one month prior to the examination. The oral examination shall consist of a presentation of the dissertation results and the defense. Dissertation defense is open to the public, but only members of the Doctoral Committee may vote. The dissertation defense passes only through a unanimous vote.

At least one month prior to degree conferral, the candidate must submit to the Doctoral Program Council of the University two copies of the final version of the dissertation. The dissertation will not be considered as accepted until approved by the Doctoral Committee and publication acceptance. Each member of the Doctoral Committee must indicate his/her final approval by signature.

The University reserves the right to evaluate the undertakings and the accomplishments of the degree candidate in total, and award or withhold the degree as a result of its deliberations.

Institutional Review Board (IRB) Involvement
In addition, doctoral dissertation involving human subjects, conducted at educational institutions is required to be in compliance with federal regulations. ITU’s IRB, in accordance with federal regulations, reviews all research involving human subjects for compliance with applicable regulation and other best practices. This includes the DBA research proposals, prior to the data collection stage. Candidates are urged to understand their obligations in relation to their interactions with human subjects and the IRB by reviewing the ITU IRB Handbook.

Time Limit for Completing Degrees
All requirements for the doctoral degree must be completed within eight years following acceptance into the Ph.D. program. Extensions will be allowed only in unusual circumstances and must be approved in writing by the Doctoral Program Council.

THERMAL MASTER’S DEGREE
Students who are not able to complete the dissertation after completing the required number of credit hours of coursework will receive a Terminal Master’s degree, if 30 credits of PhD have been successfully completed.

COURSE DESCRIPTIONS

ECE 500 Electrical and Computer Engineering (3)
Prerequisites: None
This course provides a general review of technical trends and up-to-date developments in electrical and computer engineering with relevance to computer architecture, IC chip design, distributed computing systems, the Internet of Things, artificial intelligence implementation and applications. Experts in the fields teach the course.

ECE 510 Algorithms and Data Analysis (3)
Prerequisites: None
This course discusses computer algorithms as applied in the computer and electrical engineering fields. It covers fundamental techniques of design, analysis and implementation, including artificial neural networks, machine learning and deep learning, object recognition, and optimization algorithms. Big data and data mining techniques will be covered. Course project is designed to strengthen students’ problem-solving capabilities.

ECE 646 Capstone Course 1 - IoT System Design (3)
Prerequisites: ECE 500
Students will learn the fundamentals of IoT system design using Raspberry Pi boards running the Linux operating system. Students will work with system peripherals, e.g., GPIO, UART, I2C, SPI, and USB; wireless data communications, e.g., Bluetooth Low Energy, WiFi, and Zigbee; and web services, e.g., Amazon Web Services (AWS). Application programming in Python and JavaScript (Node.js) will be used to complete labs that are designed to give students hands-on experience in IoT system designs.

ECE 655 Capstone Course 2 - Deep Learning Engineering Projects (3)
Prerequisites: ECE 510
Students will design and implement deep-learning systems to solve engineering problems. Students will work with open-source deep-learning tools, such as TensorFlow or Keras. State-of-the-art techniques in supervised and/or unsupervised learning will be employed. The course emphasizes analysis and problem-solving skills. Students may choose topics such as autonomous driving, object recognition, recommendation systems, etc.

CEN 508 Scientific Computing (3)
Prerequisites: None
Recommended: AMS 510
This course covers fundamental scientific computing and optimization techniques used in various computer and electronic engineering fields. The techniques include interpolation methods (linear and non-linear interpolation, piece-wise interpolation, Splines, surface interpolation), solving linear systems of equations and partial differential equations using numerical methods. The Least Squares Fitting algorithm is addressed to solve the Engineering Regression through predictive modeling, profiling, optimizations and Monte Carlo simulations. Matrix Eigen functions are introduced to derive the QR factorization and multivariate Linear Regression to solve the Data Mining dimensionality reduction algorithms such as Principal Component Analysis, Singular Value Decomposition, and Factor
Analysis. Machine learning technique such as Neural Networks, Support Vector Machines, and Artificial Intelligence are also briefly introduced. Time series frequency and spectrum analysis techniques are addressed on time domain engineering problems. Reliability engineering concepts, as well as modeling and computing techniques are demonstrated for both hardware device and software testing. Software such as MATLAB, R, and SAS/JMP will be used to help students conduct their scientific projects.

CEN 520 Artificial Intelligence Application (3)  
Prerequisites: None  
This course introduces recent deep learning software, libraries and tools for the development of artificial intelligence (AI) applications. AI applications produce large amounts of data and use computational power to learn information. Central problems of AI research including reasoning, knowledge, planning, learning, communication, perception, autonomous navigation and the manipulation of objects are discussed for the application development.

CEN 540 Network Security Techniques (3)  
Prerequisites: None  
Recommended: CEN 548  
This course is designed to develop knowledge and skills for security in the network systems and focuses on design and implementation of network security solutions. The key areas of the network security are intrusion detection, virtual private networks, firewalls, web security, packet filtering, network layer security, and electronic mail security.

CEN 542 Computer Vision and Image Processing (3)  
Prerequisites: None  
Recommended: ECE 510  
The course will cover concepts and techniques for image processing and computer vision with an emphasis on the state-of-the-art techniques currently used in academia and industry. Topics will include image filtering, edge detection, segmentation, object/image/face classification, object detection, morphological operators, object tracking, properties of human visual perception, sampling and quantization, image enhancement, image restoration, two-dimensional Fourier transforms, noise removal, image deblurring, image registration and geometric transformation, image/video compression, video communication standards, object recognition and image understanding.

CEN 548 Computer Network Systems (3)  
Prerequisites: None  
This course covers the theory and practice of essential computer network hardware and software. Topics include communication networks including local area networks (LANs), wide area networks (WANs) and protocols, network topologies, protocol hierarchy, network reference models, circuit vs. packet switching, signal transmission, modulation and multiplexing, Media Access Control (MAC), error detection, flow control, congestion control, and routing protocols such as RIP, IGRP, EIGRP, OSPF, IS-IS and BGP. This includes the standard protocols of IEEE and IETF, and Network Operating Systems (NOS). The class will also cover OSI (open system interconnection), TCP/IP, networking architecture, and cyber security.

CEN 551 Computer Architecture (3)  
Prerequisites: None  
Recommended: Working knowledge of digital logic and circuits  
This course focuses on principles of computer architecture, offering students an overview of computer systems, CPU and GPU designs, computer arithmetic, instruction set architecture, pipelining, microprogramming techniques, memory hierarchies and management, input/output subsystem organization, and performance measurement. Neuromorphic and other potential future computer architectures will be studied.

CEN 556 Distributed Computing Systems (3)  
Prerequisites: None  
Recommended: ECE 510  
This course covers several important topics in distributed systems, including map-reduce, stream processing, cloud computing, remote service invocation (RPC), web services, service registration and discovery, data synchronization, service replication, cyber-security, and fault tolerance.

CEN 557 Data Science and Technology (3)  
Prerequisites: None  
This course introduces systems capable of processing and interpreting massive data sets. Fundamental and practical issues of data analysis will be addressed, including scalable algorithms, security of data and software, visualization of information, decision making from data, and high-performance computing algorithms. Database design (normalization and decomposition), data definition and manipulation languages (relational algebra and calculus) and architecture of database management systems will also be covered.

CEN 581 Principle of Internet of Things (3)  
Prerequisites: None  
This course provides the fundamentals of Internet of Things. It focuses on system collaborating various device protocols, coordinating recovery data from sensors, providing local control of assets, and best reuse of existing resources and infrastructures. Related technologies, architectures, and protocols aimed at improvement of system efficiency, resource sharing, interoperability, and intelligent use of sensors will be introduced. With seamlessly connected sensor devices and cloud databases, IoT makes information management systems more efficient, intelligent, and globally applied. User interfaces of mobile devices with app implementation and system security will be discussed.

CEN 643 Capstone Course 2 - Advanced Image Processing (3)
Prerequisites: None
This course introduces techniques and algorithms for advanced digital image processing. It covers segmentation, shape and texture, morphology, recognition and classification, compression techniques, real-time image and video coding, etc. Matlab is used to implement and test various image-processing algorithms.

CEN 653 Challenge of Edge Device Design (3)
Prerequisites: None
Recommended: ECE 500
This course emphasizes the challenges of edge device design and technologies. The key topics include condensed and precise structure design, reliability and quality, security, and energy efficiency. The course also covers design redundancy, device location, and performance.

CEN 688 Special Topics in Computer Engineering (1-3)
Prerequisites: None
The course offers a relatively new subject that is not currently available in the catalog, but will be of great relevance to computer engineering. It consists of lectures, readings, homework, presentations and projects determined by the instructor.

CEN 689 Independent Study (1-3)
Prerequisites: Approval by Department Chair
Independent Study allows students to conduct independent research on an approved topic in computer or electrical engineering, prepare a technical report, and defend it in front of a faculty advisor.

CEN 698 Master Thesis I (3)
Prerequisites: Approval by Department Chair
Thesis research is arranged with a thesis advisor upon an approval by chair of the department. Students will conduct independent research in computer engineering, prepare a thesis, and defend it in front of a committee consisting of a faculty committee designated by the EECE department chair.

CEN 699 Master Thesis II (3)
Prerequisites: Approval by Department Chair Master
Thesis II is a continuance of Master Thesis I. It is upon recommendation of student’s thesis advisor and approval of chair of the department.
Paper submitting for publication is required.

CFL 591 Integrating Academic & Internship Learning (2)
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591 in order to be eligible to enroll in INT 593.

INT 593 Internship (1-3)
Prerequisites: CFL 591
This course consists of participation in a full-time or part-time internship experience, related to the student’s field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A student may take a maximum of 10 credit hours of INT 593.

EEN 511 Integrated Circuit Design (3)
Prerequisites: None
Recommended: College Level Physics
This course provides an overview of IC (integrated circuit) design and methods. The course introduces the IC design procedure, analog and digital circuits, logic, schematic and layout design techniques, design verification, high-speed circuits and low-power design techniques. Implementation of artificial intelligence on a chip will be discussed. Course project will involve using EDA tools or FPGA implementation.

EEN 513 Microprocessor Design (3)
Prerequisites: None
Recommended: CEN 551
The course introduces various microprocessor architectures, characteristics, and applications. It delivers to students a specific microprocessor design for understanding functional block design and design considerations. Neuromorphic computing architecture is studied.

EEN 520 ASIC Design I (3)
Prerequisites: None
Recommended: Working knowledge of Digital Structure
The course focuses on ASIC design principles, consideration, and design implementation with logical design, verification, synthesis, and design analyses of function, timing, power, signal integrity, design-for-testability and others. A design project with a front-end ASIC design flow will be assigned for practice.

EEN 521 AI Design Using FPGA (3)
Prerequisites: None
This course introduces the fundamentals of artificial intelligence (AI) and applications. Machine-learning algorithms, deep learning systems with various neural networks, object recognition, autonomous movement, and other topics will be discussed. Students will work in groups to
implement an AI application using FPGA.

EEN 525 ASIC Design II (3)
Prerequisites: None
Recommended: Working knowledge of Digital Structure
The course emphasizes back-end ASIC design implementation with floorplan, placement and routing, layout verification and parameter extraction, design for manufacture and post-layout analysis with consideration of timing-driving and power-aware layout. A design project with a back-end ASIC design flow will be assigned for practice.

EEN 541 Digital Signal Processing and System Analysis (3)
Prerequisites: None
Recommended: AMS 514
This course focuses on analysis of discrete-time signals in both time and frequency domains, modeling of electrical systems, and the design of finite impulse response (FIR) and infinite impulse response (IIR) filters. The sampling theorem, reconstruction process, discrete Fourier transform (DFT) and its computation with the fast Fourier transform (FFT) and applications are discussed. Design and implementation of FIR and IIR filters and multi-rate signal processing, decimation, interpolation, least mean square (LMS), normalized least mean square (NLMS), sample rate conversion, and efficient implementation are covered. Application of communications systems and system analysis are introduced. Students will learn Fourier techniques, applications in communications systems, and implementation of signal processing software and hardware.

EEN 616 Mixed Signal IC Design (3)
Prerequisites: EEN 511
The course focuses on the intersection of the digital and analog design worlds. The course will introduce various SPICE simulators for circuit analysis as well as Matlab for system analysis. The students will be expected to have basic analog circuit and digital design knowledge, and to have used the principal EDA tools like SpectreRF and Verilog. The course will cover mixed signal subsystems such as A/D converters, digital PLLs, embedded CPUs with thermal sensors, DDR PHYs and others. Mixed-signal issues like substrate noise will be explored in detail. The course will also include a significant design project with a simple embedded CPU.

EEN 618 Analog and RF IC Design (3)
Prerequisites: Knowledge of Electrical Circuits
This course covers fundamentals of CMOS analog and RFIC design. The course starts with basic design and analysis of CMOS analog amplifiers, frequency response of cascaded amplifiers, gain-bandwidth considerations, concepts of feedback, stability, and frequency compensation, and moves forward to electromagnetics like high-Q inductor design, device modeling and layout issues. The course examines in detail the primary CMOS RF subcircuits like LNAs, power amplifiers, fractional N synthesizers, mixers and filters. A design practice will be provided using SpectreRF, with the passive components designed using Sonnet or equivalent modeling tool. The circuits will be laid out using Cadence Virtuoso and the parasitic parameters will be extracted using Assura.

EEN 627 Capstone Course 2 - IC Design to Silicon (3)
Prerequisites: EEN 511
The course will provide students with hands-on practice in chip design. Students will complete a full, custom design, from circuit to silicon. With given technology and design specifications, students will start their own designs on a transistor-level schematic, check design accuracy, complete layout and layout verification, and run LPE and whole chip post-layout verification. The designs will be taped out for manufacture, and chips will be packaged and tested.

EEN 629 System on Chip (SOC) (3)
Prerequisites: ECE 500
The course introduces methods, considerations and analysis of System on Chip design fundamentals. VLSI architectures, systolic arrays, self-timed systems, system verification, design flow and implementation will be covered. System C and/or System Verilog will be applied for practice.

EEN 630 Quantum Devices and Systems (3)
Prerequisites: None
Recommended: ECE 500
The course gives a succinct introduction to quantum mechanics, with emphasis on the basic concepts and a selected range of quantitative techniques to analyze quantum systems. It will describe the working principles of nano-engineered devices that are designed to be the building blocks of future quantum information and communication systems. The relevance of quantum mechanics in advanced electronic devices will be illustrated by discussing in detail several topics such as single-electron transistors, quantum point contacts, quantum transport systems, superconducting quantum interference device, charge, phase and flux qubits, quantum dots (artificial atoms), high electron mobility transistors, super conducting devices, and quantum transport in mesoscopic structures.

EEN 635 Introduction to MEMS Design (3)
Prerequisites: None
The course introduces MEMS design fundamentals, microfabrication techniques and analysis of a variety of MEMS structures including switches, accelerometers and microcavities. The focus will be on hands-on design using COMSOL and Matlab and modeling the resulting structures' electromechanical properties. The class will have a design project.

EEN 671 Wireless Communication Systems (3)
Prerequisites: None
The course provides an overview of wireless communication systems in use today as well as some of the emerging systems such as 5G cellular systems. It presents wireless challenges and wide range of wireless applications, from cellular systems to wireless local area networks (WLAN), to satellite communications, and their underlying technologies. It will examine the pros and cons of wireless communication and describe both infrared and radio technologies. It will also survey the representative 2G, 3G and 4G cellular systems as well as representative WLAN systems.

EEN 688 Special Topics in Electrical Engineering (3)
Prerequisites: None
The course offers a relatively new subject that is not currently available in the catalog, but will be of great relevance to electrical engineering. It consists of lectures, readings, homework, presentations and projects determined by the instructor.

EEN 689 Independent Study (1-3)
Prerequisites: Approval by Department Chair
Independent Study allows students to conduct independent research on an approved topic in electrical or computer engineering, prepare a technical report, and defend it in front of a faculty advisor.

EEN 698 Master Thesis I (3)
Prerequisites: Approval by Department Chair
Thesis research is arranged with a thesis advisor upon an approval by chair of the department. Students will conduct independent research in computer engineering, prepare a thesis, and defend it in front of a committee consisting of faculty designated by department chair.

EEN 699 Master Thesis II (3)
Prerequisites: Recommendation of student’s thesis advisor; approval by Department Chair
Master Thesis II is a continuance of Master Thesis I. Submitting a paper for publication is required.

EEN 715 Advanced Computer Architecture (3)
Prerequisite: CEN 551 Computer Architecture
The course covers broad and in-depth topics from traditional Von Neumann computer architecture, to brain-inspired neuromorphic computing, and quantum computing. The course focuses on technological trends in computer architectures, and edge-device applications which require extremely low power and high performance. Operating systems which have been developed for optimal performance on specific computer architectures will be discussed. AI chips and computer interfaces will also be discussed.

EEN 717 Advanced Integrated Circuit Design (3)
Prerequisite: EEN 511 Integrated Circuit Design
The course covers comprehensive knowledge of integrated circuit (IC) design, from system-level, to register-transfer level (RTL), to gate-level, and finally to transistor-level designs. The course also reviews analog IC designs including high-frequency amplifiers, high-Q oscillators, low-noise circuits, non-linear systems, active filters, A/D converters, power amplifiers, power management, and mixed signal IC designs. The course will require the use of HSPICE and some electromagnetic modeling and analysis.

EEN 733 Advanced Computing Technology (3)
Prerequisite: None
The course covers distributed computing system architecture and technologies, the MapReduce and Apache Spark distributed computing models, and circular aggregation. Additional topics include artificial neural networks (ANNs), ANN applications, and using specialized hardware (TPU, GPU and FPGA) for solving optimization problems.

EEN 736 Advanced MEMS Design (3)
Prerequisites: EEN 635
The course applies parametric design and optimal design to micro-electro-mechanical systems with an emphasis on design and micro-mechanical simulation. The primary thrust of the course will be experimental, with an actual design and fabrication project to be built in a local MEMS fabrication facility. The design will be analyzed for electromechanical properties and compared to the simulations.

EEN 739 Bioelectronics and Bioengineering (3)
Prerequisites: None
This course reviews key concepts in biology, biochemistry, biological interfaces, and critical human body systems from an engineering researcher’s perspective. Additional topics include electronic sensors, MEMS, optics, spectroscopy, lab-on-a-chip technologies, analog electronics and digital signal analysis. Laboratory sessions expose the student to bioelectronics systems research and engineering.

EEN 749 Advanced Digital Signal Processing (3)
Prerequisites: EEN 541
The course focuses on advanced topics in signal processing,
including: filter banks and multi-rate signal processing, time-frequency analysis, short time Fourier transform (STFT), wavelet transform, linear prediction and optimum linear filters, and adaptive filtering. These lectures will connect these concepts to applications in biomedical imaging, computational photography, image and video compression, noise cancellation, echo cancellation and other areas.

**EEN 753 Advanced Machine Learning Engineering (3)**
Prerequisites: None
This course focuses on recent advances in machine learning and developing skills for performing research in the field. Topics range from understanding different algorithms for knowledge and model discovery, to using theoretical and experimental techniques in assessing learning performance. Course discussions include nonparametric and parametric approaches, supervised and unsupervised learning, reinforcement learning, modeling and training methods. An emphasis on the topic of autonomous vehicles addresses the issues of detection and analysis, self-learning systems, Bayesian networks, Artificial Neural Networks, sensor data analysis, pattern recognition, observation-based self-localization, map learning, environment reconstruction, motion planning and motion control.

**EEN 758 Advanced System Design (3)**
Prerequisites: ECE 646
The course exposes students to the state-of-the-art design and analysis techniques for embedded systems. Fueled by advances in semiconductor technology, new research areas in advanced embedded system design have emerged. The main topics include system modeling, performance and power/energy analysis and estimation, system-level partitioning, synthesis and interfacing, co-simulation and emulation, intelligent edge devices, and reconfigurable computing platforms. Research papers with significant impacts on the above topics are studied in detail. Class discussions and research project participation are integral parts of the course.

**EEN 774 Advanced Wireless Communications (3)**
Prerequisites: EEN 671
The course focuses on up-to-date digital communication systems and technologies. It covers detection, estimation, and modulation and information theory principles. The course will discuss how to apply the techniques to calculate performance limits and strategies for wireless communication systems. The course will further analyze and compute channel capacity and derive optimal communication strategies for memoryless deterministic/fading single-antenna/multi-antenna single-user/multiuser channels (e.g., discrete memoryless channels, AWGN, multiple access channels, MIMO, broadcast channels). The concepts are illustrated using examples from the wireless systems, such as IEEE 802 family, 3G, LTE, 5G and proposed future technologies.

**EEN 891 Independent Study (1-3)**
Prerequisites: Approval by PhD Advisor
Independent Study is designed for PhD students. The student will study a special interest in electrical engineering under the direction of an instructor who is knowledgeable in the field. It may consist of readings, homework, tests, presentations and project reports assigned by the instructor.

**EEN 907 Doctoral Dissertation Thesis (3-9)**
Prerequisites: Approval by PhD Advisor
Doctoral Dissertation Thesis consists of a series of research studies and is arranged with thesis advisor for PhD candidates upon having his/her thesis topic approved. Students will conduct independent research in electrical or computer engineering, prepare for publication, prepare a thesis and defend it in front of a committee consists of a number of faculty designated by Department Chair.

Courses numbered 700 or above are designed for the PhD-EE program. Master’s degree students are eligible to take 700 series as elective courses.

**AMS 510 Linear Algebra (3)**
Prerequisites: None
This course covers algebraic basic concepts of matrices and matrix operations, determinants, systems of linear equations, Gauss elimination, LU decomposition, vector spaces with inner product, change of bases, transformations, and Gram-Schmidt orthonormalization. Meaning and purpose of eigenvalues and eigenvectors and algorithms for computing them are also introduced.

**AMS 512 Applied Mathematics Methods (3)**
Prerequisites: None
The course focuses on applying mathematical methods to analyze and solve engineering problems. This course covers a review of linear algebra, numerical methods, matrix operations, digital methods for solving differential and partial differential equations. It covers optimization and minimization methods, systems of linear equations, mathematics used for deep neural networks, backward propagation algorithms, and other popular methods used in machine learning areas. R or Python scripting language might be used in practice of varied algorithms learned in the course.

**AMS 514 Fast Fourier Transformation & Applications (3)**
Prerequisites: None
The course provides electrical/computer engineering and applied mathematics graduate students with an understanding of Fourier Transformations (FT), Discrete Fourier Transformations (DFT) and Fast Fourier
Transformations (FFT). The applications of FFT in Filter Design, Signal Processing and Image Processing are also included in this course.

AMS 520 Optimization Techniques (3)
Prerequisites: None
The course covers basic concepts of unconstrained optimization, linear programming, simplex method, degeneracy, and multidimensional optimization problems involving equality or inequality constraints by gradient and non-gradient methods.

AMS 530 Numerical Analysis (3)
Prerequisites: None
The course covers numerical solution of linear system of equations by the direct method and iterative methods, numerical least square problem, eigenvalue problem, numerical solution of non-linear systems of equations and optimization problem.

AMS 540 Discrete Mathematics (3)
Prerequisites: None
The course covers topics that are important in the development of computer algorithms and data structures, such as mathematical induction, asymptotic notations, recurrences, infinite series summations, graphs, digraphs, trees and counting combinatorial and discrete probabilities analysis and statistical quality control.

AMS 552 Probability, Statistics and Reliability for Engineers (3)
Prerequisites: None
This course introduces measurable analysis of uncertainty for engineering applications. Statistics, probability, random processes, and decision analysis are covered along with random variables and vectors, conditional distributions, Bayesian analysis, second-moment analysis and system reliability. Risk-based decision, estimation of distribution parameters, hypothesis testing, Poisson and Markov processes will also be discussed. Other application topics include measurement system analysis, process capability analysis, statistical process control, data mining and reliability modeling. R or Python scripting language might be used in course projects.

AMS 722 Advanced Applied Mathematics Methods (3)
Prerequisites: AMS 512
The course will emphasize the connection between mathematics and applied and natural science and technologies. Applied mathematics and computational methods encompass some of the most diverse and interdisciplinary research in the physical, engineering, and biological sciences, and are broadly used for the design and optimization of products and processes.

AMS 750 Abstract Algebra (3)
Prerequisites: AMS 510
This course provides the abstract algebraic knowledge necessary for coding theory and cryptography. The general notion of algebraic structures, groups, rings, fields. Ring of polynomials over fields. Remainder classes of polynomials. Field extensions and Galois Fields. General field extensions, fields of rational, real and complex numbers. Some complex arithmetic. Vector spaces over various fields including GF(2). Euclidean algorithm in finite fields. Linear algebra in GF(2^n). The algebra used in AES. Square roots of elements in GF(2^n).

AMS 760 Advanced Optimization Techniques (3)
Prerequisites: AMS 520
Combinatorial optimization, Hopfield neural network model, Simulated Annealing and Stochastic machines, mean field annealing, genetic algorithms, Applications to: Tabu search, traveling salesman problems, telecommunication problems, quadratic 0-1 and quadratic assignment problems, graph partition and graph bipartition problems, point pattern matching problems, multiprocessor scheduling problems.

DEPARTMENT RESEARCH ACTIVITIES

Five research labs are established within the department:
- Artificial Intelligence (AI),
- Bioelectronics (BE),
- Embedded Systems (EM),
- System-on-Chip (SoC)
- Green Energy (GE),

Research focuses on cutting-edge innovation and application, including autonomous movement, deep learning in engineering, object recognition, non-invasive glucose sensors, smart battery management system, close-loop energy-management systems in cloud, etc.

FACULTY

DEPARTMENT CHAIR
Dr. May Huang, PhD, International Technological University. Professional member of ACM, IEEE; Served as Principal Engineer and Project Manager at Virtual Silicon, Hitachi, VLSI Tech Inc. etc.; Guest Professor at Peking University, Tsinghua University, Beijing University of Post and Telecommunication.

ASSITANT CHAIR
Dr. Neeli R. Prasad, PhD, University of Rome “Tor Vergata”, Italy. CEO and Founder of SPA Solutions LLC; Senior member of IEEE, Committee member IEEE Communication Society (ComSoc) Globecom/ICC Management and Strategy (GIMS) and chair of the Marketing, Strategy, and Staff Liaison Group.

**RESEARCH PROFESSORS**

Dr. Karl Wang, PhD, Massachusetts Institute of Technology. Served as Director of Advanced Product Development at ARM, Inc., Director of Microprocessor Development at Hitachi, VP of Design Services and IP Business Division at UMC, VP of Research and Development at Silicon Motion, Inc. Advisor of Embedded Research Lab.

Dr. John Ladasky, PhD, Stanford University. Founder of Blind Watchmaker LLC. Research Scientist at Bioelectronics Research Lab.

**CORE FACULTY**

Dr. Eric Chen, PhD, Waterloo University. Tech Lead at Uber, Google and GE Healthcare. Advisor of AI Research Lab.

Dr. Dominik Schmidt, PhD, Stanford University. Technology Analyst at QVT Financial LP, Former Senior Director of Technology Development at Intel. Advisor of Bioelectronics Research Lab.

Dr. John Kim, PhD, New Mexico State University. Served as Senior Engineer at Broadcom, District Manager at Panasonic, and a consultant at Electronics, Telecommunications Research Institute (ETRI), Sybersay Communications, and Bell Labs in Lucent Tech.

Dr. Ted Sun, PhD, Santa Clara University. Served as Engineer at Integrated Device Technology and Cadence.

**ADJUNCT FACULTY**

Dr. Raminder Bajwa, PhD, Pennsylvania State University. Director of ASIC design at Google.

Dr. Fred Cheng, PhD, International Technological University. COO of Tend Insight Inc., former CTO of TChips Technology, and VP of Marketing at Winbond.

Dr. Qingning Li, PhD, University of Utah. System Consultant at Engineering Information and former designer at IBM, Advisor of Green Energy Research Lab.

Dr. Bhaskar L. Mantha, PhD, University of Cincinnati. Engineer at Intel, VLSI Technology, Hynix, and Zilog.

Dr. Xiaoshu Qian, PhD, University of Rhode Island. Engineering Director at Intel.

Dr. Jagadeesh Vasudevamurthy, PhD, McGill University, Canada. Senior Engineer at Xilinx, Mentor Graphics and Synplicity.

Dr. John Ye, PhD, University of Southern California. Engineering Director at Camel Microelectronics, Inc. Advisor of SoC Research Lab.

Dr. Henry Zhang, PhD, University of Texas at Austin. Engineering Director of ASIC design at Sundisk.

Dr. Qing Zhu, PhD, UC Santa Cruz. Engineering Manager at eveRAM Technology Inc., Intel and SanDisk.
Mission
The mission of the Engineering Management Department at ITU is to train graduate students to become both competent managers of projects in technology-oriented businesses and entrepreneurial leaders.

Institutional Learning Outcomes (ILOS)
1. Problem Solving: Construct, interpret, analyze, and evaluate information and ideas derived from a multitude of sources in order to reach reasoned solutions or alternative strategies to solve problems.
2. Critical Thinking: Analyze facts and information from multiple sources in order to assess the relevance and synthesize that information in order to formulate meaningful arguments and conclusions.
3. Communication: Interact clearly and effectively in written and oral forms with personal and professional constituencies.
4. Team Work: Operate collaboratively and respectfully as members and leaders of diverse teams and organizations.
5. Technical Literacy: Work responsibly, appropriately and effectively, using technology tools to access, manage, integrate, evaluate, create and communicate information and innovation.
6. Research: Identify and implement systematic methodologies for discovering, understanding, analyzing and interpreting materials, information and behaviors.
7. Responsibility: Practice sound, ethical, and social responsibility in professional and personal endeavors and decision-making.

Master Of Science In Engineering Management
The Master of Science in Engineering Management degree program provides practical training in the essential elements of running a technology-focused business including instruction in project management, business strategy, teamwork, collaboration, and communication, product management and marketing, accounting, finance, legal aspects of technology businesses, operations and supply chain management.

For some, engineering management is described as a "technical MBA." However, it is distinguishable from an MBA in its focus on training graduate students to manage the development of new technology and learning how to create competitive advantage from the strategic use of information technology.

Currently, companies are showing a preference for technical graduate students who have both a deep understanding of technology and who also show cross-training in business management knowledge and skills. It is with this emphasis that the Engineering Management Department focuses its training.

Moreover, given the effects of globalization on technology-based businesses, the ITU masters in engineering management degree emphasizes the need for candidates to develop a strong appreciation and awareness of emerging technologies and to be able to adapt to the constant impact of change in the business environment.

The standards to which the Engineering Management program aligns itself include models provided from universities who are members of the Masters in Engineering Management Program Curriculum (MEMPC). This is a prestigious group of nine top-tier universities in America including Cornell University, Dartmouth, Duke, Johns Hopkins, MIT, Northwestern University, Purdue, Tufts University, and the University of Southern California.

The ITU department also studies guidance put out by the American Society of Engineering Management (ASEM) and participates in the Technology and Engineering Management special interest group of the IEEE.

Program Learning Outcomes (PLOS)
Upon completion of this program, graduates will:
PLO #1: Be prepared to lead engineering and technical project teams delivering new products and services whether in the United States or internationally. (Mapped to: ILO#4, Collaboration and Teamwork) and ILO#7, Individual Responsibility)
PLO #2: Be able to take a systems-approach to analyzing problems and managing projects. (Mapped to: ILO#1, Problem Solving and ILO#5, Technical Literacy)
PLO #3: Understand the process of aligning project goals and objectives with corporate strategy. (Mapped to: ILO#1, Problem Solving and ILO#5, Technical Literacy)
PLO #4: Have a strong grasp of principles of project management and be able to apply them in the work setting. (Mapped to ILO#1, Problem Solving and ILO#5, Technical Literacy)
PLO #5: Be able to demonstrate good communication skills, both written and oral, as an engineering manager. (Mapped to ILO#3, Communication Literacy)
PLO #6: Demonstrate competence and knowledge in at least one area of technical emphasis, such as software engineering, electrical engineering, etc. (Mapped to ILO#5, Technical Literacy and ILO#6, Research Skills and Information Literacy)
PLO #7: Show evidence of an entrepreneurial mindset that allows the engineering manager to identify new business opportunities and an ability to develop an action plan to capitalize on new venture ideas. (Mapped to ILO#1, Problem Solving)

Career Opportunities
Upon completion of the Engineering Management master's program at ITU, students, depending on their elective course choices, can prepare themselves for positions in engineering management, as lead project engineers, technology analysts, R&D managers, business analysts, data analysts, product managers, systems analysts, program managers, patent engineers or analysts, IT consultants, market research analysts, operations managers, management consultants, and more.

Master Of Science Engineering Management Program
Requirements

REQUIRED COURSES:
- 4 Core Courses: 12 credit hours
- 1 Capstone course: Project or Thesis: 3 credit hours
- 1 Internship: 1 credit hour
- Elective courses: 11-20 credit hours
- Internship: 1-9 credit hours
- Cross Disciplinary course: Up to 3 credit hours
- Transfer Credits: Up to 9 credit hours from a graduate program of a regionally accredited school

36 total credit hours

GRADE POINT AVERAGE (GPA):
A minimum 3.0 cumulative GPA is required for granting of the Master’s degree.

REQUIRED CORE COURSES
- EMG 500 Principles of Engineering Management
- EMG 501 Engineering Project Management
- EMG 502 Organizational Behavior
- EMG 503 Product Management

CAPSTONE COURSE
- EMG 690 Capstone Project
  OR
- EMG 697 Thesis

ELECTIVE COURSES
Electives from the MSEM curriculum must be chosen so that the total number of credit hours completed is at least 36.
- EMG 504 Blockchain Fundamentals For Engineering Managers
- EMG 505 Data Engineering For Engineering Managers
- EMG 510 Mobile Applications and IoT Development for Entrepreneurs
- EMG 511 Technology Management and Entrepreneurship
- EMG 522 Fundamentals of Business Analysis for Software Development
- EMG 528 AI Technology Management
- EMG 529 Machine Learning for Engineering Managers
- EMG 530 Regulatory Affairs For Medical Devices
- EMG 540 Writing and Presentation Skill-Building for Engineering Managers
- EMG 545 Introduction to Medical Devices and Digital Health Products
- EMG 549 Introduction to Software Development & Business Architecture for Engineering Managers
- EMG 550 Software QA & Testing for Business Analysts
- EMG 551 Agile Methodologies
- EMG 552 DevOps and Microservices Architecture
- EMG 553 Business Technology Strategy
- EMG 554 Management Consulting
- EMG 557 Internet of Things (IoT) Management Issues
- EMG 559 Introduction to Sensor Technology for Engineering Managers
- EMG 560 Cybersecurity Management
- EMG 563 Introduction to Intellectual Property Management
- EMG 564 Quantitative Analysis for Engineering Managers
- EMG 565 Healthcare Product Economics and Outcomes
- EMG 568 Technology Management
- EMG 570 Cloud Computing Management Issues
- EMG 574 Physics for Engineering Managers
- EMG 579 Business Process Management
- EMG 688 Special Topics
- EMG 689 Independent Study
Course Descriptions

**Engineering Management (EMG)**

**EMG 500 PRINCIPLES OF ENGINEERING MANAGEMENT (3)**
Prerequisites: None
This course will provide an overview of the essential skills relevant to managing engineering and science-based teams in a variety of industries. Such teams are typically responsible for new product development, getting innovations to market, developing new technologies, implementing product improvements, establishing or improving technical processes, and setting up organizational infrastructure. Students will focus on the fundamental skills and applications of engineering and science management and will be introduced to business and engineering topics needed to be successful in the field. Major topics include the areas of leadership and ethics, general management principles, teamwork, collaboration, project management, risk management, systems engineering, organizational structure and behavior, customer service, business communication, marketing, trends in science and technology, innovation management, entrepreneurship, and more.

**EMG 501 ENGINEERING PROJECT MANAGEMENT (3)**
Prerequisites: None
This course is an exercise in applying the principles of project management to an engineering or other technical objective. Project management training features will include team formation, leadership skills development, collaboration, market research and assessment, project planning, generating a project charter with business case justification, work breakdown structure, risk assessment, task assignments, scheduling, on-going project-reporting, conflict resolution, a final project report and presentation.

**EMG 502 ORGANIZATIONAL BEHAVIOR (3)**
Prerequisites: None
The purpose of this course is to provide students with a technical background to become effective managers and leaders. It covers a wide range of management and leadership issues that industries face today – from individual, to team, to entire organization. It includes: individual differences, personnel diversity, motivation in the workplace, managing individual stress, interpersonal communication, managing interpersonal conflicts and negotiation, team building, leadership models and styles, decision making in organizations, organizational culture and managing change.

**EMG 503 PRODUCT MANAGEMENT (3)**
Prerequisites: None
The product manager is responsible for the strategy roadmap, and feature definition of a product or product line. In this course, students will learn about the general role of the product manager in technology-oriented businesses.

**EMG 504 BLOCKCHAIN FUNDAMENTALS FOR ENGINEERING MANAGERS (3)**
Prerequisites: None
In this course students will learn about the fundamentals of blockchain technology including How blockchains work, the relationship between bitcoins and blockchain, the notion of a distributed transaction ledger, the difference between a traditional database and a blockchain, What is a bitcoin network?, smart contracts etc.

**EMG 505 DATA ENGINEERING FOR ENGINEERING MANAGERS (3)**
Prerequisites: None
Engineering is relying on data more than ever before. This course will explore the collection of data as it relates to the job of engineering managers including topics on data science, data warehousing, data architecture design, database design and building, requirements gathering, data modeling, data mining, and more.

**EMG 510 MOBILE APPLICATIONS AND IOT DEVELOPMENT FOR ENTREPRENEURS (3)**
Prerequisites: None
This course teaches how to develop applications for mobile computing devices such as iPhones, Android smartphones, iPads, etc. Topics to be covered will include client hardware (desktop and mobile), Android development with Java, iOS development with Swift, web services and RESTful API, creating and incorporating web and cloud services, IoT and its business applications, security and trust management, usability and accessibility.

**EMG 511 TECHNOLOGY MANAGEMENT AND ENTREPRENEURSHIP (3)**
Prerequisites: None
This course focuses on the connection between entrepreneurship and the creation of new technologies which drive economic development and the creation of wealth. A second area of study focuses on the existence or establishment of an “innovation ecosystem” to create and sustain economic development.

**EMG 522 FUNDAMENTALS OF BUSINESS ANALYSIS FOR SOFTWARE DEVELOPMENT (3)**
Prerequisites: None
In this course, students will learn about the basic duties of business analysts in the field of software development. Overall, business analysts help companies solve problems by developing a process or technical solution. A business analyst’s work is done at many levels within a company, but at its core necessitates an understanding of the Software Development Life Cycle (SDLC) which involves: a) planning a software project, b) identifying the project scope, c) eliciting, analyzing, and communicating requirements, d) designing a solution, e) building or buying the solution, f) testing the solution, g) implementing the solution, and h) conducting a post-project review.

**EMG 528 AI Technology Management. (3)**
Prerequisites: None
We are currently seeing a proliferation of artificial intelligence systems in a wide variety of applications, but at the same time, there is not often any discussion of the management issues associated with this new technology. This course is designed to identify technology management issues and to give engineering managers an introduction to what the field of artificial intelligence is about.

EMG 529 MACHINE LEARNING FOR ENGINEERING MANAGERS (3)
Prerequisites: None
Machine learning (ML) is increasingly becoming an integral part of product design. There is hardly any application that will not benefit from machine learning. Engineering managers will need to have a fundamental understanding of machine learning and how it can be applied to build better products or risk being left behind in the competition for talent with relevant skills. The course provides engineering managers who are new to ML with the necessary knowledge and skills to manage product development of ML-based products. At the end of the course students will be able to confidently assess how the addition of ML impacts new product design, compile requirements and specifications for ML-based products, effectively assess performance and strategies for product development of ML-based products, put engineering teams together with the right skill sets, and manage product development cycles for ML-based products.

EMG 530 REGULATORY AFFAIRS FOR MEDICAL DEVICES (3)
Prerequisites: None
The expanding field of medical devices and digital health is governed by very unique regulatory requirements. Engineering managers, business analysts and product managers must be aware of these requirements not only to successfully manage and budget projects but also to avoid costly project delays including judicial actions. This course will lay the foundation of regulations for domestic and international marketing of medical devices and digital health products including mobile medical technology. Students will understand the regulatory pathways to market these products. Students will also receive hands on experience in establishing a quality management system in accordance with government regulations.

EMG 540 WRITING AND PRESENTATION SKILL-BUILDING FOR ENGINEERING MANAGERS (3)
Prerequisites: None
The key emphasis of this course is on writing. The students will begin by receiving training on producing technical engineering reports, summarizing engineering management academic literature and journal articles, writing engineering research reports, writing a thesis in the engineering management discipline, and more.

EMG 545 INTRODUCTION TO MEDICAL DEVICES AND DIGITAL HEALTH PRODUCTS (3)
Prerequisites: None
This course provides an introduction to the special regulatory requirements associated with developing medical devices (i.e., medical treatment and diagnostic products), as well as other new technologies in the emerging digital health industry.

EMG 549 INTRODUCTION TO SOFTWARE DEVELOPMENT AND BUSINESS ARCHITECTURE FOR ENGINEERING MANAGERS (3)
Prerequisites: None
This course provides a comprehensive introduction to computer programming and software development. The instruction will benefit individuals pursuing management careers in programming and software development, as well as anyone in the information technology field who works with programmers and systems analysts. General topics covered will include: 1) Problem-solving approaches to software development 2) Specifications and requirements 3) User-interface design 4) Structured program design.

As to programming concepts, the course will provide basic instruction in Python, C, C#, Java, Visual Basic and shell scripting. The course includes working with different operating systems, such as Linux. As exercises, students will develop small web applications and mobile apps. The full software development life cycle (SDLC) will be taught, including unit test and integration, alpha / beta testing, and software defect tracking and classification.

EMG 550 SOFTWARE QA & TESTING FOR BUSINESS ANALYSTS (3)
Prerequisites: None
This course will cover the typical software testing methods found in industry and will prepare business analysts and others with a need to know about the fundamentals of software testing procedures and practices found in Silicon Valley.

EMG 551 AGILE METHODOLOGIES (3)
Prerequisites: None
Agile software development is an umbrella term for a set of methods and practices based on the values expressed in the 2001 Agile Manifesto which documented the views of leading software developers in the field at that time. This course instructs students on these industry best practices.

EMG 552 DEVOPS AND MICROSERVICES ARCHITECTURE (3)
Prerequisites: None
In general, DevOps represents a change in information technology (IT) culture focusing on rapid IT service delivery through the adoption of agile, lean practices in the context of a system-oriented approach. DevOps emphasizes people and culture and seeks to improve collaboration between operations and software development teams. In this course, you will learn the key ideas and techniques to bring development and operations together to produce higher-quality software and deliver it more quickly. You will also develop the ability to integrate communication,
collaboration, integration and automation in order to improve the flow of work between software developers and IT operations professionals for faster development and deployment.

EMG 553 BUSINESS TECHNOLOGY STRATEGY (3)
Prerequisites: None
This course is aimed at engineers and managers who want to be leaders in a technical environment and advance into executive roles. Students will learn the basic skills and techniques that a majority of executive teams apply to address strategic and operational problems in an integrated way across multiple business and technology domains. In the first half of the course you will learn the fundamentals: what strategy is, and what are the most common techniques and tools for strategy assessment and formulation. In the second half we move from fundamentals to organizational and personal implications for technical leaders, such as chief information officers, chief technology officers, enterprise architects and program managers. Two fundamental questions dealt with in the course are: How to make better use of IT to increase the productivity of the business? How to leverage IT innovations to help the business win in an increasingly digitized world?

EMG 554 MANAGEMENT CONSULTING (3)
Prerequisites: None
This course is aimed at those specifically interested in consulting careers and/or whose future jobs involve working with consultants. Students will learn the basics of the consulting profession with subsequent emphasis on business technology (BT) – the ever increasing reliance on information technology by business of all types to digitize and optimize their business models. In the first part of the course you will learn the basic principles that apply to any consulting-based approach and explore a range of topics that define consulting knowledge. These topics cover the consulting process from preparation for and delivery of client engagements to management of engagement-related obstacles and the development of advising skills.

In the second part of the course, students will explore a range of topics that consultants and their consulting clients need to know when engaging on BT change initiatives. These topics cover the essential building blocks of any digital transformation blueprint: lean thinking and innovation, process automation, organization and change management, technology insights, and data and analytics.

EMG 557 INTERNET OF THINGS (IOT) MANAGEMENT ISSUES (3)
Prerequisites: None
The Internet of Things is a proposed development of the Internet in which everyday objects will have networked connectivity, allowing them to send and receive data. This course is focused on studying the management problems that will arise in connection with this rapidly emerging technology.

EMG 559 INTRODUCTION TO SENSOR TECHNOLOGY FOR ENGINEERING MANAGERS (3)
Prerequisites: None
Sensor technology is an important aspect of the Internet of Things which is forecasted to have huge impacts on business and society in the near future. This course is designed to give students a hands-on introduction to the kind of devices changing our world with the Internet of Things and will provide them with a basic understanding of the core technology allowing them to engage in product development and prototyping.

EMG 560 CYBERSECURITY MANAGEMENT (3)
Prerequisites: None
This course is an introduction to cybersecurity principles, processes and technologies. It presents students with a detailed overview of best practices in the management, governance, and policy development of cybersecurity measures for businesses and organizations.

EMG 563 INTRODUCTION TO INTELLECTUAL PROPERTY MANAGEMENT (3)
Prerequisites: None
In this course students will learn about the connection between knowledge, innovation and intellectual property asset creation. Moreover, they will also learn about the value and importance of the proper management of IP assets including: 1) Identifying existing intellectual property assets and the need for developing new ones. 2) Documenting existing and new intellectual property. 3) Deciding on the proper form of intellectual property protection needed in any particular instance. 4) Deciding how the intellectual property asset will be used. 5) Periodically reassessing the value and use of the intellectual property portfolio.

EMG 564 QUANTITATIVE ANALYSIS FOR ENGINEERING MANAGERS (3)
Prerequisites: College Algebra, minimum requirement. Pre-Calculus or Introduction to Calculus is the preferred background.
The content of the course will be on applied mathematics in such areas as technology forecasting, linear programming, transportation network flows, practical applications of determinants and matrices, calculus-based optimization, inventory control models, queuing theory, as well as other math topics in operations research and supply chain management.

EMG 565 HEALTHCARE PRODUCT ECONOMICS AND OUTCOMES (3)
Prerequisites: None
This course explores the various synergistic dynamics of healthcare product economics and outcomes. Topics will include reimbursement overview, insurance coverage, product design, comparative effectiveness review, and the Affordable Care Act. Emphasis will be placed on how creative innovations and synergism can impact the healthcare industry and economics.

EMG 568 TECHNOLOGY MANAGEMENT (3)
Prerequisites: None
In this course, students will develop a broad understanding of technology management and its importance in establishing competitive advantage in a globalized world. Content will include studies of leadership, technology trends, market analysis, innovation management, product development, business model analysis, effective organizational structure, team building and collaboration, project management, and effective business communications.

EMG 570 CLOUD COMPUTING MANAGEMENT ISSUES (3)
Prerequisites: None
Cloud computing is the practice of using a network of remote servers hosted on the Internet to store, manage, and process data, rather than a local server or a personal computer. In this class students will study the issues associated with managing cloud services and the business considerations needed before switching to the cloud.

EMG 574 PHYSICS FOR ENGINEERING MANAGERS (3)
Prerequisites: None
This course has been designed for graduate engineering management students who are not degreed engineers. It provides non-engineers with a good grounding in physics principles and applications and gives students a means to transition into the role of technical management.

EMG 579 BUSINESS PROCESS MANAGEMENT (3)
Prerequisites: None
Business process management is a discipline that uses various methods to discover, analyze, measure, improve and optimize business processes in an organization. In this course, students will learn about the basic methods used to analyze business processes and will develop skill in conducting business process analysis.

EMG 688 SPECIAL TOPICS (1-3)
Prerequisites: None
Special topics courses cover subjects not currently contained in the curriculum, but are designed to address especially relevant trends or developments related to the discipline.

EMG 689 INDEPENDENT STUDY (1-3)
Prerequisites: None
Independent Study allows students to explore academic areas of special interest not provided in the existing curriculum. It is carried out under the guidance of a member of the faculty.

EMG 690 CAPSTONE PROJECT (3)
Prerequisites: None
Required: Department Chair approval and completion of 18 credit hours of the MSEM program.
During the last two trimesters of their training, students in the ITU Engineering Management Department must complete a capstone project or write a master’s thesis. If the capstone project option is chosen, engineering management students are required to demonstrate their competence in

EMG 697 THESIS (3)
Prerequisites: None
Required: Department Chair approval and completion of 18 credit hours of the MSEM program. During the last two semesters of their training, students in the ITU Engineering Management Department must complete a capstone project or write a master’s thesis. If the thesis option is chosen, students must seek the assignment of a thesis advisor to guide their research on a topic in the field of engineering management. These must be fully analyzed, explained and documented in the thesis. If the Thesis Option is chosen, students must seek the assignment of a thesis advisor.

Classroom Field Learning (CFL)

CFL 591 INTEGRATING ACADEMIC & INTERNSHIP LEARNING (2)
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591(can be taken concurrently) in order to be eligible to enroll in INT 593.

Internship (ITN)

INT 593 P/F INTERNSHIP (1, 3)
Prerequisites: CFL 591
This course consists of participation in a full-time or part-time internship experience, related to the student’s field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A maximum of 10 credit hours earned in INT 593 may be applied toward the Master’s Degree graduation.
requirements.

Faculty

• Tom Tafolla, J.D. Law, University of San Francisco, Interim Department Chair

CORE FACULTY

• Girish Harshe, Ph.D. Solid State Electronics, Penn State University; MBA University of Chicago Booth School of Business; Assistant Department Chair
• Bhairav Mehta, M.S. Industrial and Systems Engineering, Rochester Institute of Technology; M.S. Applied Statistics/Operations Research and MBA, Cornell University; MBA, Queen’s University, Ontario, Canada; Core Faculty
• Mamoun Samaha, M.S. Electronics and Computer Engineering, Eindhoven University of Technology; Core Faculty

ADJUNCT FACULTY

• Alex Peters, Post-Doctorate Fellowship, Princeton University; Ph.D. Engineering, RWTH Aachen University, Aachen, Germany; Adjunct Faculty.
• Alfonso Ramirez: MBA, Global Business Management; Quality Manager, Stryker, Inc., Fremont, California (a world-leading medical technology company with 33,000 employees worldwide and $12.4 billion annual sales). Adjunct Faculty.
• Avid Farhoodfar: Ph.D. Engineering Physics, Queen’s University, Kingston, Ontario, Canada; Master’s in Condensed Matter Physics, Brock University, Ontario, Canada; Master’s Plasma Physics, IAU, Iran; M.S. Software Engineering, International Technological University, San Jose, California. Adjunct Faculty.
• Donna Dulo: Ph.D. candidate, Software Engineering, U.S. Naval Postgraduate School, Monterey, California; J.D., Monterey College of Law, Salinas, CA; computer scientist, mathematician, systems engineer. Adjunct Faculty.
• Jeremy Tzeng, M.S. / Ph.D. Electrical Engineering, University of California Berkeley, Adjunct Faculty.
• Kishan Jainandunsing: Ph.D. and M.Sc., Electrical Engineering, Delft University (TU Delft), the Netherlands; Principal of SenzoLabs, new product development advising; consultant in the areas of machine learning and Internet of Things (IoT). Adjunct Faculty.
• Michelle Liang, Ph.D. Computer Science, Fudan University, Shanghai, People’s Republic of China; M.S. Computer Engineering, University of Minnesota, Minneapolis, Minnesota; Adjunct Faculty.
• Robert Payne, L.L.M. International Law, University College, University of London; J.D. University of California Davis, B.A. Stanford University; Adjunct Faculty.
• Yousef Al-Shehabi, Ph.D. Theology; M.S. Computer Science and Electrical Engineering, Santa Clara University; M.A. International Relations, San Francisco State University; Adjunct Faculty.
Doctor of Philosophy in Interdisciplinary Sciences

GENERAL REQUIREMENTS
Students must complete 60 credit hours to earn their degree
- 30 Credit Hours of Course Requirements
- 30 Credit Hours of Dissertation
- Program Requirements

Program Requirements
APPLICATION:
Students who complete their master’s degree in the subject field with GPA or above are eligible to apply for the Ph.D. program. Exceptions may apply to select individuals upon AQC approval.

THESIS ADVISOR:
It is the student’s responsibility to obtain consent from a full-time faculty member in the student’s major department to serve as her/his prospective thesis advisor. Students are required to find a thesis advisor as soon as possible after being accepted as a Ph.D. student. The student and the thesis advisor jointly develop a complete program of study for research in a particular area. The complete program of study (and any subsequent changes) must be submitted to the AQC and approved by the student’s advisor.

COURSE WORK AND STUDY PROGRAM:
The students are expected to complete a minimum of 60 credit hours of graduate credit beyond the master’s degree. Of these, 30 credit hours may be earned through coursework and independent study and 30 through the thesis. All thesis credit hours are graded on a Pass/No Pass basis. A maximum of 15 credit hours may be transferred from other accredited institutions at the discretion of the student’s advisor.

COMPREHENSIVE EXAMINATIONS:
After completion of the formal course work approved by the Doctoral Committee, the student shall request for comprehensive examination. The examination shall be a written exam representing sufficient preparation in depth and breadth for advanced research in the major. The comprehensive examinations normally must be completed within four years from the time of admission. Comprehensive examinations may be repeated only once, in whole or in proposed thesis topic, and determine any further changes to approving the research objective.

Thesis Research:
The period following the comprehensive examinations is devoted to research for the thesis, although such research may begin before the examinations are complete. After a research topic is approved by the Doctoral Committee, the students should conduct the thesis research toward the defined objective.

Publication:
One or more refereed articles based on the thesis research must be accepted for publication in a professional or scientific journal approved by the Doctoral Committee.

Thesis Defense:
The thesis must be made available to all examiners one month prior to the examination. The oral examination shall consist of a presentation of the results of the thesis and the defense. Thesis defense is open to all faculty members of the University, but only members of the Doctoral Committee have a vote.

Program Completion:
At least one month before the degree is to be conferred, the candidate must submit to the Academic Quality Committee two copies of the final version of the thesis describing the research in its entirety. The candidate will submit the final draft of their thesis to ProQuest Dissertation Publishing. The Research Librarian is available to answer publication questions and assist students in this process. The thesis will not be considered as accepted until approved by the Doctoral Committee and publication acceptance. The University reserves the right to evaluate the undertakings and the accomplishments of the degree candidate in total, and award or withhold the degree as a result of its deliberations.

Time Limit for Completing Degrees:
All requirements for the doctoral degree must be completed within ten years following acceptance for the Ph.D. program. Extensions will be allowed only in unusual circumstances and must be approved in writing by the Committee on Graduate Programs.
Prerequisite Requirements
All courses listing a prerequisite requirement can be petitioned by the student for waiver and evaluated by the Academic Committee on a case-by-case basis.

Ph.D. in Interdisciplinary Sciences Requirements
The completion of at least 30 credit hours of graduate courses in the major field of study, and 30 credit hours of thesis includes:

30 Credit Hours of Required Courses:
  » IDS 711 General Consilience
  » IDS 712 Physics
  » IDS 713 Cosmology
  » IDS 714 Chemistry
  » IDS 715 Genetics
  » IDS 716 Evolution
  » IDS 717 Biology/Ecology
  » IDS 718 Evolutionary Neuroscience
  » IDS 719 Psychology
  » IDS 720 Philosophy

30 Credit Hours of Thesis/Dissertation:
  » IDS 901 Doctoral Dissertation
Internships
In order to be competitive in today’s economy, students must graduate with relevant work experience. Employers are looking for more seasoned employees who can add value from the start, so skill development is a key component of ITU’s educational pedagogy. ITU places a strong emphasis on hands-on learning through internships, which link classroom learning to relevant industry experience. If you are an International Student, you must be in lawful F-1 status to be eligible to apply for internship.

COURSES
» CFL 591: Integrating Academic and Internship Learning
» INT 593: Part-Time/Full-Time Internship

COURSE DESCRIPTIONS
CFL 591 INTEGRATING ACADEMIC AND INTERNSHIP LEARNING (2)
Prerequisites: None
This course provides an overview of expectations and requirements for INT 593 Internship, teaches students how to integrate their academic and internship learning, and enhances career skills development. A student must pass CFL 591(can be taken concurrently) in order to be eligible to enroll in INT 593.

INT 593 PART-TIME/FULL-TIME INTERNSHIP (1, 3)
Prerequisites: CFL 591
This course consists of participation in a full-time or part-time internship experience, related to the student’s field of study under the supervision of both an approved internship provider and a faculty advisor. This course provides practical, hands-on training in a relevant industry to enhance classroom learning. A maximum of 10 credit hours earned in INT 593 may be applied toward the master’s degree graduation requirements.

Certificate Programs
Upon completing three of the approved enterprise resource planning courses with a grade of B or above, the student is awarded a joint student recognition award from ITU and SAP University alliance. To collect the certificate, the student should make the request after completing the three courses or while submitting their petition to graduate.

ITU Presents
ITU Presents aims to connect University students with the artists, inventors, engineers, and business owners shaping modern day Silicon Valley. ITU Presents has hosted guest lectures from Oscar nominees, start-up founders, and industry experts. Join us for our next ITU Presents to learn about the latest trends and network with the larger community.

The Student Success Program includes programming designed for both native and non-native English speakers that enable them to effectively communicate in both academically and professional contexts.

The program includes skill development in the following areas: library research, academic writing, giving presentations, interviewing, resume and cover letter writing, and reading comprehension. All students are welcome to join this program if their schedule permits. The program is offered during the day. Much of the program is conducted virtually so students don’t have to worry about commute time and costs.

The Student Success Program has a required lab and materials fee which covers testing, textbooks and some other course expenses. This fee must be paid each trimester the student is enrolled. Students must complete a placement test prior to starting the program in order to properly assess their language development needs. The course runs the full length of the trimester.
